Owner's Manual +

Mercedes-Benz

Front passenger airbag warning

⚠ WARNING Risk of injury or death due to an enabled co-driver airbag

If the co-driver airbag is enabled, a child on the co-driver seat may be struck by the co-driver airbag during an accident.

- ▶ NEVER use a rearward-facing child restraint system on a seat with an ENABLED FRONT AIRBAG. DEATH or SERIOUS INJURY to the CHILD can occur.

Observe the chapter "Children in the vehicle".

Welcome to the world of Mercedes-Benz

Before your first drive, please read this Owner's Manual carefully and familiarise yourself with your vehicle. For your own safety and a longer service life of the vehicle, follow the instructions and warning notices in this Owner's Manual. Disregarding them may lead to damage to the vehicle or injury to people.

The standard equipment and product description of your vehicle may vary and depends on the following factors:

- Model
- Order
- National version
- Availability

Your vehicle may therefore differ from that shown in the descriptions and illustrations in individual cases.

The illustrations in this Owner's Manual show a left-hand drive vehicle. On right-hand drive vehicles, the layout of vehicle parts and controls differs accordingly.

Mercedes-Benz is constantly developing its vehicles further.

Mercedes-Benz therefore reserves the right to introduce changes in the following areas:

- Design
- Equipment
- Technical features

The following documents are components of the vehicle:

- Digital Owner's Manual
- Printed Owner's Manual
- Service Booklet
- Supplementary manuals relating to specific equipment
- Supplementary documents

Keep these documents in the vehicle at all times. Ensure that all documents are in the vehicle or passed on in the event of sale or rental.

Disclaimer

The following online version of the Owner's Manual describes all models as well as all the standard and optional equipment of your vehicle. Country-specific differences in the language variants are possible. Note that your vehicle may not be fitted with all features described. This is also the case for safety-relevant systems and functions.

Please contact your authorised Mercedes-Benz dealer if you would like to have a printed Owner's Manual for other vehicle models and vehicle model years. The online version is the current valid Owner's Manual version. Possible variations to your vehicle may not be taken into account as Mercedes-Benz constantly updates their vehicles and equipment to the state of the art and introduces changes in design and equipment.

Please also read the printed Owner's Manual, any supplementary documents and the digital Owner's Manual in the vehicle.

In this Owner's Manual, you will find the following symbols:

 **WARNING** Danger due to not observing the warning notices

Warning notices draw your attention to hazards that may endanger your health or life, or the health or life of others.

 Observe the warning notices.

 **ENVIRONMENTAL NOTE** Environmental damage due to failure to observe environmental notes

Environmental notes include information on environmentally responsible behaviour or environmentally responsible disposal.

 Observe environmental notes.

 **NOTE** Damage to property due to failure to observe notes on material damage

Notes on material damage inform you of risks which may lead to your vehicle being damaged.

 Observe notes on material damage.

 These symbols indicate useful instructions or further information that could be helpful to you.

- ▶ Child safety locks for the rear doors (→ page 122)

Radio

Operating radio

- ▶ **To switch to radio:**
 - Briefly press  on the multimedia system display.
 - Tap on .
- ▶ **To set the frequency band:**

- Briefly press  on the multimedia system display.
- Tap on .
- Select a frequency band or a favourite.
- ▶ **To set a radio station:**
 - Briefly press  on the multimedia system display.
 - Tap on .
 - Swipe to the left or right on the control element or select a radio station.
- ▶ **To call up the radio station list:**
 - Briefly press  on the multimedia system display.
 - Tap on .
 - Select .
- ▶ **To search for radio stations using station names or frequency entry:**
 - Briefly press  on the multimedia system display.
 - Tap on .
 - Select .
 - Enter a station name or frequency.

- Select a station.

▶ **To store radio stations:**

- Briefly press  on the multimedia system display.
- Tap on .
- Select .

▶ **To set the traffic information service volume increase:**

- Briefly press  on the multimedia system display.
- Tap on .
- Select **System**.
- Select **Audio**.
- Select **Navigation & traffic announcements**.
- Set a value for **Traffic announc. vol. increase**.

Wi-Fi hotspot

Setting up a Wi-Fi hotspot

Generally, two types of Wi-Fi connection are available:

- Using the multimedia system as a Wi-Fi hotspot

The multimedia system serves as a Wi-Fi hotspot for mobile communication devices such as a smartphone or tablet PC.

The data volume of the vehicle or an already connected tethering device is used for the data connection.

Data volumes must be purchased via the Mercedes me Portal.

The use of the vehicle data tariff by external devices is not available in all countries.

- Using a mobile communication device as a Wi-Fi hotspot (tethering)

An external Wi-Fi hotspot is accessed for the Internet connection of the multimedia system.

The data tariff of the mobile communication device via **Acquired package** is used for the data connection.

Options for setting up a connection:

- QR code
The connection is set up by scanning the QR code shown on the multimedia system.
- NFC
The connection is set up by placing the mobile communication device in the NFC interface of the vehicle.
- Security key
The connection is established by entering the security key displayed on the multimedia system.

Connecting a mobile phone

Connecting a mobile phone

▶ **Activating Bluetooth®:**

- Make sure that the mobile phone Bluetooth® is switched on.

- Tap on  on the central display or media display.
- Select **Settings**.
- Select **System**.
- Select **Internet and Bluetooth**.
- Activate Bluetooth®.

▶ Searching for a mobile phone:

- Tap on  on the central display or media display.
- Select **Phone**.
- Select .
- Select **Devices**.
- Select **Devices**.
- Select **Connect new device**.

▶ Authorising a mobile phone:

- Select a mobile phone.

A code is displayed in the multimedia system and on the mobile phone.

- ▶ If the codes match, confirm the code on the mobile phone.

MBUX Voice Assistant

Operating the MBUX Voice Assistant

You can use the MBUX Voice Assistant to operate the following functions depending on the vehicle equipment:

- Telephone
- Text message and e-mail
- Navigation
- Radio and media
- Vehicle functions
- Online functions

Examples of possible voice commands:

- To operate the phone: Call my father.
- To manage e-mails: Show me my new e-mails.
- To operate the navigation: Search for an Asian restaurant, but not Japanese, in South London.
- To operate the radio: Which station am I currently listening to?
- To operate media: Play a similar track.

- To operate climate control: My feet are cold.
- To operate vehicle functions: Open the window.
- To call up the weather: Will it be sunny tomorrow?
- To ask a general knowledge question: Who painted the picture "The Scream"?

ENERGIZING Packages

Operating ENERGIZING COMFORT

▶ To start an ENERGIZING programme:

- Briefly press  in the multimedia system display.
- Select **Comfort**.
- Select **ENERGIZING COMFORT**.
- Select a programme and start with .

▶ To configure an ENERGIZING programme:

- Select a programme.
- Select **Settings**.
- Switch the functions included in the programme on or off.

▶ **To start Power Nap:**

- Select **Power Nap**.
- Select  for the desired seat.

▶ **To start a training programme:**

- Select **Training**.
- Select a programme and start with .
- To activate fragrancing for training, select **Air freshener**.

▶ **To start Tips:**

- Select **Tips**.
- Select an area of the body and start with .

Driving Assistance package

Functions of the Driving Assistance Package

The Driving Assistance Package contains various functions that assist you when driving. For this purpose, your vehicle uses cameras and radar sensors to monitor the area in front of, behind or next to the vehicle.

The following functions are included in the Driving Assistance Package, depending on country-specific availability:

- ▶ Active Distance Assist DISTRONIC (→ page 277)

You can watch an animation on this topic via the following link:

- ▶ Active Speed Limit Assist (country-dependent) (→ page 283)

You can watch an animation on this topic via the following link:

- ▶ Route-based speed adaptation (country-dependent) (→ page 283)
- ▶ Active Brake Assist (→ page 289)

You can watch an animation on this topic via the following link:

- ▶ Active Steering Assist (country-dependent) (→ page 285)

You can watch an animation on this topic via the following link:

- ▶ Active Emergency Stop Assist (country-dependent) (→ page 287)
- ▶ Active Stop-and-Go Assist (country-dependent)
- ▶ Active Lane Keeping Assist (→ page 304)

Parking Package

Functions of the Parking Package

Depending on country-specific availability, your vehicle may be equipped with various functions to assist you with parking and manoeuvring. For this purpose, your vehicle uses cameras and ultrasonic sensors to monitor the vehicle surroundings.

You can watch an animation on this topic via the following link:

Depending on the equipment version, the following systems and functions are part of your Parking Package:

- ▶ **Reversing camera:** monitors the area to the rear of the vehicle and displays this in the driver display (→ page 306).

▶ **360° camera:** a system comprising four cameras which cover the immediate vehicle surroundings and display this in the driver display (→ page 310).

▶ **Parking Assist PARKTRONIC:** an electronic parking assistance system which monitors the area surrounding your vehicle and the distance to obstacles in the vicinity using ultrasound (→ page 314).

▶ **Active Parking Assist:** an electronic parking assistance system which assists you when parking or exiting a parking space by changing gear, accelerating, braking and steering the vehicle (→ page 318).

High-voltage battery AC charging (mode 2 or 3)

AC charging (mode 2 or 3)

Starting and ending the charging process (combo 2 socket)

Starting and ending the charging process (combo 1 socket)

▶ More notes on charging the high-voltage battery (→ page 232)

▶ Overview of the charging cable control panel (→ page 240)

High-voltage battery direct current charging (mode 4)

Direct current charging (mode 4)

Starting and ending the charging process (combo 2 socket)

Starting and ending the charging process (combo 1 socket)

▶ More notes on charging the high-voltage battery (→ page 232)

▶ Overview of the charging cable control panel (→ page 240)

Destination entry navigation

Entering a navigation destination

▶ Briefly press  in the multimedia system display.

The home screen is shown.

▶ Select **Navigation**.

▶ Select .

Select the following options for destination entry:

- Enter a POI, an address or a three-word address in the input line.
Online search results for POIs (if available) may contain additional information, for example opening times and prices. The information is provided by an online map service.
You can find further information about 3-word addresses at: <http://+what3words.com>
- Select a destination suggestion.
Requirements:
The **Navigation** option is switched on in the user settings for **Suggestions**.

The multimedia system has gathered sufficient data in order to show destination suggestions.

- Select **Previous destinations**.

Select a previous destination.

You can save the destination as a favourite .

- Select **POIs**.

Select a POI category, e.g. **[P]** or enter a POI name or POI category in the input line.

If search results are displayed, limit them with **Filter**, for example by search position or the desired travel time.

- Select **Contacts**.

Requirements:

A mobile phone is connected to the multimedia system and contacts have been downloaded.

The contact contains a navigable address.

- Enter the geocoordinates as latitude and longitude in the input line.

Example 1: 47°58'11"N 7°57'25"E (degrees, minutes, seconds and compass direction)

Example 2: 47.969722 7.956944 (decimal degrees)

- Select a destination on the map.

- Select **Favourites**.

Requirements:

The destinations have been saved as favourites.

- Select **Received destinations**.

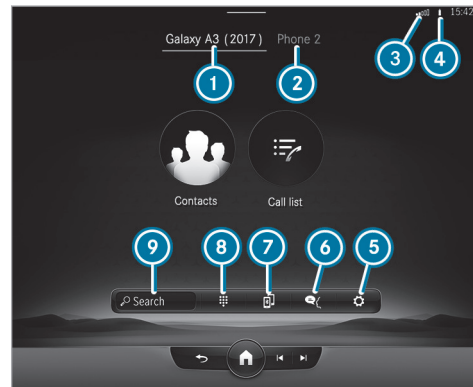

Requirements:

There is an Internet connection for receiving external destinations.

The destinations have been sent to the vehicle.

New multimedia system features

Information about the telephone menu

- 1 Bluetooth® device name of the currently connected mobile phone/of the mobile phone
- 2 Bluetooth® device name of the currently connected mobile phone/of the mobile phone (two phone mode)
- 3 Signal strength of the mobile phone network

- ④ Battery status of the connected mobile phone
- ⑤ Options
- ⑥ Messages
- ⑦ Calls up my devices
- ⑧ Numerical pad
- ⑨ Starts contact search

Telephone menu overview

Via the telephone menu you can use the functions in connection with your mobile phone.

The following functions can be used:

- Call lists
- Contacts
- Messages
- Device manager

Using call lists

If your mobile phone supports the PBAP Bluetooth® profile, the call lists from the mobile phone are displayed in the multimedia system.

The following functions are available:

- Making calls from the call list
- Opening contacts on the call list

Messages

In the message menu you can receive text messages and create and send them with the help of the MBUX voice assistant. In addition, you can conveniently use the read-aloud function during the journey.

Device manager

In the device manager, you can connect your mobile phone with the multimedia system.

You have the option of using your mobile phone alone in single telephone mode or together with another mobile phone in two phone mode.

Using contacts

If you permit the multimedia system to access the contacts in your mobile phone, you can use these in the vehicle. You can store up to 8,000 contacts.

The following options are available to you via the contacts menu:

- Making telephone calls (calling a contact)
- Navigation

- Composing messages with the help of the MBUX voice assistant
- Additional options

The contacts from your mobile phone can be downloaded automatically or manually.

Conducting a call

When conducting a call, additional functions are available apart from making, accepting or rejecting a call. For example, you can switch between calls, conduct a call with several participants or conference calls.

It is also possible to accept or reject waiting calls. If you receive a call while already in a call, a message is displayed.

During a call you can activate the following functions:

- Microphone off
- Fade in the numerical pad to send DTMF tones
- Add a call
- Hands-free mode to transfer the call to the front or rear passenger compartment

- Privacy mode to transfer the call to the telephone or headphones

Information about navigation

- 1 Navigation module (reduced view)
Route guidance active:

Reduced view of the navigation module shows information relevant to the route, e.g. the next charging stop, the destination and a traffic delay

Tapping opens the navigation module and displays the route overview (→ page 407)

Tapping on the chequered flag ends the current route guidance

- 2 Sets map orientation  and map type
- 3 Calls up the telephone menu
- 4 Calls up entertainment applications
- 5 Navigation window shows the next manoeuvre (zoomed out view) or the route monitor (zoomed in view)

Route guidance active: route monitor shows, e.g. route sections, upcoming driving manoeuvres with lane recommendations, charging stops, destination, traffic delays, 3D images at motorway exits, online content

When you switch on the multimedia system or after selecting , the digital map is shown.

The navigation system offers many options for destination entry, route planning and route guid-

ance. The traffic situation is taken into account during route guidance. When using route guidance with augmented reality, additional information can be shown in a camera image before a turning manoeuvre. Services and apps help you reach the destination quickly, safely and in comfort.

After tapping on navigation module 1 start destination entry via  in the route overview. You can enter the POI, address or contact as the destination on-board or search online using a map service. Or you select a previous destination. The destination can be stored here as a favourite or be saved as an address for home and work. When the [Allow destination suggestions](#) option is switched on, the vehicle makes suggestions based on your visited navigation destinations. If external destinations and routes are received from apps or services, these are also available.

The following options are available for route planning, for example:

- Navigation with Electric Intelligence
If the [Schedule charging stops](#) route option is enabled, the optimal route based on time is calculated with the required charging stops.

The charging stops are determined taking into account the route and charging times and are set as intermediate destinations for route guidance.

- Route options:
e.g. [Schedule charging stops](#) and avoid or use toll roads, tunnels, unpaved roads or avoid areas
- Intermediate destinations
- Alternative routes
- Commuter route
- Service station search

You can record and save routes then select or share them with a USB device.

Lane recommendations are shown during route guidance on multi-lane roads. When driving on a motorway, service facilities on the route ahead can be shown and used for route guidance.

The Live Traffic Information service takes the current traffic situation into account. The map can show the current traffic flow, traffic incidents or warning messages, e.g. before the end of traffic jams that pose a risk.

Hazardous situations on public roads are detected automatically by the vehicle via Car-to-X-Communication or these can be reported by the driver. The early warning makes it possible to adapt your driving characteristics in good time. Accidents, broken-down vehicles, weather hazards or a vehicle with activated hazard warning lights are shown on the map.

For route guidance with augmented reality, information objects such as arrows indicating a turn, street names and house numbers are shown in a video image during the driving manoeuvre or at traffic lights.

The map shows map data from the database or from an online map service. In small map scales, buildings are shown as realistic images. The online map update service makes possible the updating of the map data.

Weather information and data from other services can be shown on the map. Multi-storey car parks with the corresponding equipment, deliver data about the current occupancy and about parking charges, for example.

The options offered vary depending on the country, vehicle equipment and available services.

Navigation module (expanded view) with route overview

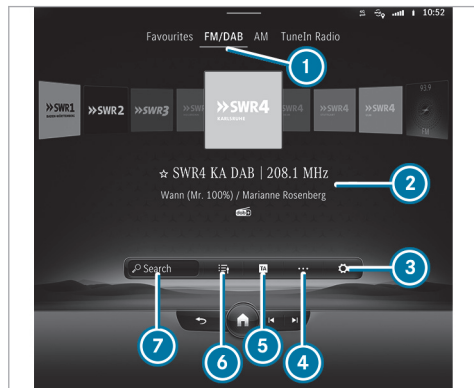

Example: route guidance is active

- 1 Enters an address or POI
- 2 Information about delays along the route
- 3 Arrival time and address for the charging stop
- 4 Charging stop shows the charging time recommended by the Navigation with Electric Intelligence as well as states of charge on arrival and onward journey for an optimal travel time

as well as: current distance to charging stop

- ⑤ Alternative routes
- ⑥ Searches for an additional charging station
- ⑦ Switches traffic information display on or off
- ⑧ Makes settings for **View**, **Messages & tones** and **Route**

Information on radio

- ① Active frequency band
- ② Station name or set frequency
- ③ Settings
- ④ Additional options
- ⑤ Switches on traffic reports
- ⑥ Station list
- ⑦ Search

Using the radio menu you can play a multitude of radio stations and use the Internet Radio Tuneln. Search for your preferred stations and save these as favourites or in station lists.

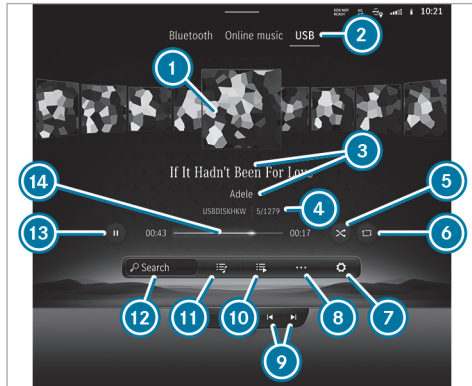

- ① The function of Tuneln Internet radio is country-dependent.

Radio text: this function shows you the station name, the track and the artist for the song currently playing, for example.

DAB: with the DAB function, graphically formatted extra information about a station can be shown, e.g. logos, album covers, music tracks, programmes, news or also service information.

Traffic announcements: Traffic messages can be displayed by pressing **TA**.

Information on media

- ① Album cover
- ② Active media source
- ③ Track and artist
- ④ Active data storage medium and current track number/track in playback list
- ⑤ Random playback
- ⑥ Repeat

- ⑦ Settings
- ⑧ Additional options
- ⑨ Previous or next track and fast rewind or fast forward
- ⑩ Additional categories
- ⑪ Playlists and categories
- ⑫ Media search
- ⑬ Controls playback
- ⑭ Timeline

Using the **Media** application, you can set and use the audio and video functions of your multimedia system. You can listen to music or look at videos, for example.

USB: Using the **USB** menu, you can play back your own audio or video data from a data storage medium connected by USB.

Bluetooth®: Using the **Bluetooth** menu, you can connect Bluetooth® audio equipment with the multimedia system and play back the available tracks on the audio equipment. Connecting the device can be conveniently handled in the device manager, so you can complete all settings with just a few clicks.

Online music: The **Online music** menu allows you to access music streaming services.

Notes on comfort

The **Comfort** menu makes all the functions available that contribute to your comfort when driving or taking a break.

Seat Comfort

The **Seat** menu allows you to flexibly adjust the contours of the seats to your needs by adjusting the side bolsters and lumbar support independently. You can save these settings in your Mercedes me profile, so they can be called up each time you drive. With the **Seat kinetics** function, you can start a programme that causes slight modifications of the seat position when you are driving. These modifications promote a healthy back.

Massage

In the **Massage** menu you will find the massage programmes that are available for your vehicle. By selecting the desired program you start it directly and it runs for a period of approximately ten

minutes, depending on the program selected. With the **High intensity** function you can increase the effect of the massage programme.

Ambient light

In the **Ambient light** menu you can set the colour and brightness for your ambient lighting. Using the **Link zones** function, the ambience, accent and impression zones can be regulated separately so that you can set the lighting of your vehicle individually.

Information about smartphone integration

Using the **Smartphone Integration** menu, various applications are available that can bring the functions of your mobile phone to the multimedia system display. Operation can be carried out via the touchscreen or voice control, for example.

Only one mobile phone at a time can be connected via Smartphone Integration to the multimedia system. Also for use with two phone mode with Smartphone Integration, only one additional mobile phone can be connected using Bluetooth® with the multimedia system.

Use Android Auto for mobile phones with the Android operating system and use Apple CarPlay® with your iPhone®. The full functionality of Android Auto and Apple CarPlay® is only possible with an Internet connection.

Information about vehicle info

You can have important vehicle information displayed in the **Info** menu. At a glance you will have an overview of vehicle and engine data or current consumption values, for example. In addition, you can call up the Digital Owner's Manual via the **Owner's Manual** menu item.

Vehicle data

The following data will be shown, for example:

- Activity of the acceleration and brake pedal
- Activity of the suspension strut
- Wheel angle
- G-force display for the linear and lateral acceleration

Engine data

The following data is shown:

- Transmission oil temperature
- Engine/coolant temperature
- Performance
- Torque
- Boost pressure

Consumption data

Depending on your driving style, this display shows the current and average fuel consumption. Together with the displays of vehicle and engine data, you can adapt your driving style to be as efficient and economical as possible.

Information about In-Car Office

Using the **In-Car Office** menu you can connect your online services with the multimedia system.

You then have multiple options available:

- Organising your meetings and telephone conferences.
- Managing your e-mails and appointments.

- Have navigation to the location for a meeting.

Information about Mercedes me Apps

Various services and online functions are available via the **Apps Mercedes me** menu:

- Managing Mercedes me services
- Using the dashcam
- Using the web browser to surf the Internet

You require a user account, and have to connect your vehicle with the user account, in order to be able to use services.

- ① If the Mercedes me App is available on a mobile phone, the vehicle connection can be accomplished using the QR code shown.

Please note that the available features are country-dependent.

Information on settings

In the **Settings** you can set the basic configuration for your multimedia system and the vehicle. You have access to all functions in this menu,

from switching the driver assistance systems on and off to display and language settings.

The settings are structured in the following menus:

- **Assistance**
- **Vehicle**
- **Lights**
- **System**

Assistance menu

With the **Assistance** menu you have direct access to the driver assistance systems which are installed in your vehicle and can either switch these on or off, or configure according to your wishes.

Vehicle menu

Here you can activate the following functions, for example:

- Automatic folding in of the outside mirrors when parking the vehicle
- Automatic adjustment of the seat and steering wheel, for comfortable entry and exit from the vehicle

- Automatic activation of the 360° camera when selecting reverse gear

Light menu

All the light settings can be carried out in the **Lights** menu. You can activate or deactivate the Intelligent Light System here, set for how long your vehicle should remain lit after parking or unlocking or switch the function off.

System menu

All important settings for the multimedia system can be carried out in the **System** menu.

You can carry out the following settings, for example:

- Setting the system language
- The configuration of Wi-Fi and Bluetooth®
- Setting of time and date

At the filling station

Topping up the windscreen washer system

- ⚠ DANGER** Risk of fatal injuries when carrying out maintenance work during the charging process

During the charging process, the high-voltage on-board electrical system is under high voltage.

- ▶ Do not perform any maintenance work during the charging process.

- ⚠ WARNING** Risk of injury due to overheated vehicle

If you open the bonnet in the event of an overheated vehicle or fire in the engine compartment, the following situations may occur:

- You may come into contact with hot gases.
- You may come into contact with other escaping hot operating fluids.

- ▶ In the event of overheating or fire in the engine compartment, keep the bonnet closed and call the fire service.
- ▶ Allow the overheated vehicle to cool down first if you need to open the bonnet.

- ⚠ WARNING** Risk of injury due to moving parts

Components in the engine compartment may continue to run or start unexpectedly even when the drive system is switched off.

Observe the following if you must open the bonnet:

- ▶ Switch off the vehicle.
- ▶ Never touch the danger zones surrounding moving components, e.g. the rotation area of the fan.
- ▶ Remove jewellery and watches.
- ▶ Keep items of clothing and hair away from moving parts.

- ⚠ WARNING** Risk of burns from hot components in the engine compartment

Certain components in the engine compartment can be very hot, e.g. the drive system and the cooler.

- ▶ Allow the drive system to cool down and touch only the components described below.

- ⚠ WARNING** Risk of fire and injury from windscreen washer concentrate

Windscreen washer concentrate is highly flammable.

- ▶ Avoid fire, naked flames, smoking and the creation of sparks when using windscreen washer concentrate.

- ▶ Remove cap ① by the tab.
- ▶ Top up the washer fluid.

Replacing the windscreen wiper blades

⚠ WARNING Risk of becoming trapped if the windscreen wipers are switched on while wiper blades are being replaced

If the windscreen wipers begin to move while you are changing the wiper blades, you can be trapped by the wiper arm.

- ▶ Always switch off the windscreen wipers and vehicle before changing the wiper blades.

Moving the wiper arms into the replacement position

- ▶ Switch the vehicle on and then off again immediately.
- ▶ Within around 15 seconds, press and hold the  button on the combination switch for approximately three seconds (→ page 198). The wiper arms will move into the replacement position.
- ① Check the condition of the wiper blades regularly and replace them in the event of visible damage or ongoing smearing.

- ▶ Observe the information about the service indicator.

Service indicator

- ▶ Remove protective film ① from the service indicators on the tips of the newly fitted wiper blades.

When the colour of the service indicators changes from black to yellow, replace the wiper blades.

- i** The time until the colour changes varies depending on the usage conditions.

Information on washing the vehicle in a car wash

⚠ WARNING Risk of an accident due to reduced braking power after washing the vehicle

Braking efficiency is reduced after washing the vehicle.

- ▶ After the vehicle has been washed, brake carefully while paying attention to the traffic conditions until braking power has been fully restored.

! NOTE Damage from automatic braking

If one of the following functions is activated, the vehicle will brake automatically in certain situations:

- Active Brake Assist
- Active Distance Assist DISTRONIC

- HOLD function
- Active Parking Assist

To avoid damaging the vehicle, deactivate these systems e.g. during towing or in the car wash.

! NOTE Damage due to unsuitable car wash

- ▶ Before driving into a car wash make sure that the car wash is suitable for the vehicle dimensions.
- ▶ Ensure there is sufficient ground clearance between the underbody and the guide rails of the car wash.
- ▶ Ensure that the clearance width of the car wash, in particular the width of the guide rails, is sufficient.

To avoid damage to your vehicle when using a car wash, ensure the following beforehand:

- Active Distance Assist DISTRONIC is deactivated.
- the HOLD function is switched off.

- the 360° Camera or the reversing camera is switched off.
 - the side windows and sliding sunroof are completely closed.
 - the blower for the ventilation and heating is switched off.
 - the windscreen wiper switch is in position **0**.
 - the key is at a minimum distance of 3 m away from the vehicle. Otherwise the tailgate could open unintentionally.
 - for car washes with a conveyor system:
 - neutral **N** is engaged.
 - If you would like to leave the vehicle while it is being washed, make sure the key is located in the vehicle. The park position **P** is otherwise automatically engaged.
- i** If, after the car wash, you remove the wax from the windscreen and wiper rubbers, this will prevent smearing and reduce wiper noise.

Preparing for a holiday

Notes on adjusting the lights when driving abroad

It is not necessary to adjust the headlamps. The legal requirements are also met in countries in which traffic drives on the other side of the road.

Notes on regularly inspecting wheels and tyres

⚠ WARNING Risk of injury due to damaged tyres

Damaged tyres can cause tyre pressure loss.

- ▶ Check the tyres regularly for signs of damage and replace any damaged tyres immediately.

⚠ WARNING Risk of aquaplaning due to insufficient tyre tread

Insufficient tyre tread will result in reduced tyre grip.

The risk of aquaplaning is increased on wet roads, especially when the speed of the vehicle is not adapted to suit the conditions.

- ▶ Thus, you should regularly check the tread depth and the condition of the tread across the entire width of all tyres.

Minimum tread depth for:

- Summer tyres: 3 mm
- M+S tyres: 4 mm

- ▶ For safety reasons, replace the tyres before the legally-prescribed limit for the minimum tread depth is reached.

Carry out the following checks on all wheels regularly, at least once a month or as required, for example, prior to a long journey or driving off-road:

- Check the tyre pressure (→ page 531).
- Visually inspect wheels and tyres for damage.
- Check the valve caps.
- Visual check of the tyre tread depth and the tyre contact surface across the entire width. The minimum tread depth for summer tyres is 3 mm and for winter tyres 4 mm.

Removing the safety vest

There is a high-visibility waistcoat compartment on the door shelves of all doors for storing a high-visibility waistcoat.

- ▶ To remove: pull out safety vest bag ① by loop ②.
- ▶ Open the safety vest bag ① and pull out the safety vest.

- ▶ Replace: Fold up the safety vest, roll it up and place it in the safety vest ①.
- ▶ Slide the safety vest bag ① along the lower edge of the armrest into the safety vest compartment. Ensure that the loop ② hangs out so that it is easy to reach.

❗ Remove the packaging film before sliding it into the safety vest compartment for a new safety vest. Otherwise, it may cause unintentional slipping or make removing difficult. Observe the legal requirements in the individual countries.

- ① Maximum number of washes
- ② Maximum wash temperature

- ③ Do not bleach
- ④ Do not iron
- ⑤ Do not tumble dry
- ⑥ Do not dry clean
- ⑦ Class 2 safety vest

The requirements defined by the legal standard are only fulfilled if the safety vest is the correct size and is fully closed.

Replace the safety vest in the following cases:

- The reflective strips are damaged or dirty
- The maximum permissible number of washes is exceeded
- The fluorescence property decreases, e.g. due to permanent exposure to sunlight.

Dispose of the safety vest in an environmentally friendly way:

- Please contact your local waste disposal company.

Removing the warning triangle

- ▶ Open the load compartment floor.
- ▶ Remove warning triangle ①.

First-aid kit (soft-sided) overview

First-aid kit (soft-sided) ① is located in the storage net on the left-hand side of the load compartment.

Map data update overview

As the content of a digital road map has a short life, outdated data may have a negative effect on all navigation functions. For the best MBUX navigation experience, you should install all of the map updates offered by Mercedes-Benz.

The following options are available for the update of map data:

- Online map update
 - Updates from the Mercedes me Portal
 - Update at a Mercedes-Benz service centre
- Additional costs can be incurred in this process.

Online map update

Requirements:

- Mercedes me connect is available.
- You have a Mercedes me user account.
- The Online Map Update service is available for your region.
- The service has been activated.

❗ The Online Map Update service is only available in certain countries.

Installation takes place in the background as an automatic map update.

The MBUX multimedia system installs all of the available map updates for the European regions in which the vehicle is located or is moved.

The online map update is activated at the latest after the next time the vehicle is switched on.

Updates from the Mercedes me Portal

The map data for several regions can also be updated manually. Log in with your Mercedes me user account at: <https://www.mercedes-benz.de/>

Follow the menu path [My Mercedes Me account](#) > [My vehicles](#) > [Selection of car](#) > [Online Map Update](#). Select the regions to be downloaded to a storage medium.

After the map data has been copied, connect the storage medium with your vehicle. Select the notification with information about a new version of the map data and start the installation. After the MBUX multimedia system has been restarted, the updated map data is used.

Entering a POI or address

Requirements:

- **For the online search:**
 - There is an Internet connection.

- Mercedes me connect is available.
- You have set up a user account in the Mercedes me Portal.
- The vehicle is connected with the user account and you have accepted the terms of use.
- Further information can be found at: <https://www.mercedes.me>
- The service is available and has been activated.

i If Online Search is not available, the search is performed using the data of the digital map.

Multimedia system:

Example: entering a POI or address

- 1 Input line with current entry
- 2 Deletes an entry
- 3 Selects previous destinations
- 4 Displays and selects additional destination searches

- 5 Adopts the search result in the input line and continues the search
- 6 Search result
- 7 Deletes the last character entered
- 8 Hides the keypad
- 9 Switches to handwriting recognition (→ page 374)
- 10 Sets the written language
- 11 Switches to digits and special characters
- 12 Switches to upper-case or lower-case letters

If available, selecting the  symbol starts the MBUX Voice Assistant.

▶ Enter a destination. The entries can be made in any order.
The search results are displayed in a list.

i Online search results for POIs may contain additional information, for example opening times and ratings. The information is provided by an online map service.
This online function is not available in all countries.

The following entries can be made, for example in ①:

- Town, street, house number or street, town
- Postcode
- POI name or POI category, e.g. [Restaurants](#)
- Town, POI name
- Contact name
- Geo-coordinates (→ page 395)
- Three-word addresses from what3words (→ page 395)

Entering three-word addresses is possible in the online search.

- ▶ Hide the keyboard with .
- ▶ Select the destination in the list. The following menu shows the selected destination with the address information and a corresponding map section. The menu enables the route to be calculated.

Searching for radio stations using station names or frequency entry

Multimedia system:

- ▶ Select .
- ▶ Enter a station name or frequency.
- ▶ Select a station.

Luggage and loading

Attaching a roof luggage rack

⚠ WARNING Risk of accident due to exceeding the maximum roof load

The vehicle centre of gravity and the usual driving characteristics as well as the steering and braking characteristics alter.

If you exceed the maximum roof load, the driving characteristics, as well as steering and braking, will be greatly impaired.

- ▶ Never exceed the maximum roof load and adjust your driving style.

You will find information on the maximum roof load in the "Technical data" section.

! **NOTE** Vehicle damage due to failure to observe the maximum permissible clearance height

If the vehicle height exceeds the maximum permissible clearance height, the roof and other vehicle parts may be damaged.

- ▶ Please observe the indicated maximum clearance height.
- ▶ If the vehicle exceeds the permissible clearance height, do not drive in.
- ▶ Take the modified vehicle height in the case of roof superstructures or other carrier systems into account.

! **NOTE** Damage to the panorama sliding sunroof due to non-approved roof luggage racks

The panorama sliding sunroof may be damaged by the roof luggage rack if you attempt to

open it when using a roof luggage rack not tested and approved for Mercedes-Benz.

- ▶ When a roof luggage rack is fitted, open the panorama sliding sunroof only if this has been tested and approved for Mercedes-Benz.

The panorama sliding sunroof may be raised to allow ventilation of the vehicle interior.

Notes on driving with roof load

- Distribute the roof load and vehicle load evenly, and place heavy objects at the bottom. Also observe the notes on loading the vehicle (→ page 170).
 - Drive carefully, avoiding abrupt starting, braking and steering as well as fast cornering.
 - When transporting a roof load and with a fully laden or fully occupied vehicle, select one of the drive programs **E** and **C**. These are configured for good stability (→ page 226).
- ▶ Secure the roof luggage rack to the roof railing.

- ▶ Observe the manufacturer's installation instructions.

Folding the rear seat backrest forwards

⚠ WARNING Risk of becoming trapped when adjusting the seats

When you adjust a seat, you may trap yourself or a vehicle occupant.

- ▶ When adjusting a seat, make sure that no one has any body parts in the sweep of the seat.

⚠ WARNING Risk of accident if the rear bench seat, rear seat and seat backrest are not engaged

The rear bench seat, rear seat and seat backrest may fold forwards, even while the vehicle is in motion.

- As a result, the vehicle occupant will be pressed into the seat belt with increased

force. The seat belt will not be able to protect as intended and could cause additional injury.

- Objects or loads in the boot or load compartment cannot be restrained by the seat backrest.

- ▶ Make sure that the rear bench seat, the rear seat and the seat backrest are engaged before every trip.

If the seat backrests are not engaged and locked in place, the lock verification indicator will be red.

Always ensure that all vehicle occupants have their seat belts fastened correctly and are sitting properly. Particular attention must be paid to children.

If you no longer require the folded-down seat backrest as a loading area, fold the backrest back into place.

Requirements

- The area into which the seat backrest is folded is clear.

- To fold the centre seat backrest forwards: the centre seat backrest has been unlocked.
- The armrest on the second row of seats is folded back and the cup holders are empty.

Folding the left and right seat backrests forwards

You can fold the centre and outer seat backrests forwards.

- ▶ Move the driver's or front passenger seat forwards, if necessary.
- ▶ If necessary, fully insert the seat backrest head restraints (→ page 160).
- ▶ Pull release lever ①.

Folding the centre seat backrest forwards

- ▶ Pull release catch ③ for seat backrest ② forwards.
- ▶ Fold the corresponding seat backrest forwards.

Folding back the rear seat backrest

⚠ WARNING Risk of becoming trapped when adjusting the seats

When you adjust a seat, you may trap yourself or a vehicle occupant.

- ▶ When adjusting a seat, make sure that no one has any body parts in the sweep of the seat.

⚠ WARNING Risk of accident if the rear bench seat, rear seat and seat backrest are not engaged

The rear bench seat, rear seat and seat backrest may fold forwards, even while the vehicle is in motion.

- As a result, the vehicle occupant will be pressed into the seat belt with increased force. The seat belt will not be able to protect as intended and could cause additional injury.
- Objects or loads in the boot or load compartment cannot be restrained by the seat backrest.

- Make sure that the rear bench seat, the rear seat and the seat backrest are engaged before every trip.

If the seat backrests are not engaged and locked in place, the red lock verification indicator will be visible.

- NOTE** Damage caused by trapping the seat belt when folding back the seat backrest

The seat belt could become trapped and thus be damaged when the seat backrest is folded back.

- Make sure that the seat belt is not trapped when folding back the seat backrest.

- Move the driver's or front passenger seat forwards, if necessary.

- Fold corresponding seat backrest (1) back until it engages.

Left and right seat backrests: if the seat backrest is not engaged and locked in place, red lock verification indicator (2) will be visible.

Centre seat backrest: if the seat backrest is not engaged and locked in place, red lock verification indicator (3) will be visible.

Opening or closing the stowage space under the load compartment floor

- WARNING** Risk of injury due to an open load compartment floor

If you drive with the load compartment floor open, objects could be flung around and hit vehicle occupants as a result. There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- Always close the load compartment floor before a journey.

Opening

- ▶ Pull handle ① upwards.
- ▶ Lift the load compartment floor up using handle ①.

Closing

- ▶ Fold the load compartment floor down and then press handle ① down until it engages.

Folding the ball neck out and in

⚠ WARNING Risk of accident due to the ball neck not being engaged

If the ball neck is not engaged, the trailer may come loose.

- ▶ Always engage the ball neck as described.

⚠ WARNING Risk of injury from ball neck swinging outwards

The ball neck may swing outwards when unlocking or when it has not been properly engaged.

There is a risk of injury within the ball neck's range of movement!

- ▶ Unlock the ball neck only when its range of movement is unobstructed.
- ▶ Always be sure the ball neck is engaged when folding inwards.

! NOTE Increased risk of damage to property due to folded-out ball neck

- ▶ When the trailer is not coupled or the bicycle rack is attached, fold in the ball neck or, in the case of a fully electric trailer hitch, retract the ball neck.

! NOTE Damage to the vehicle due to incorrect use of the trailer hitch

If a trailer hitch is used to recover the vehicle, the vehicle or the trailer hitch itself may be damaged in the process.

- ▶ Use the trailer hitch only for pulling a trailer or attaching approved carrier systems (e.g. a bicycle rack).
Exception: Since vehicles with a trailer hitch do not have a fixture for a towing eye at the rear, towing or tow-starting is permitted.
- ▶ When towing or tow-starting with the trailer hitch, observe the information in the section "Fitting and removing the towing eye."

Folding the ball neck out

- ▶ Secure the vehicle against rolling away.
 - ▶ Keep the swivel range clear.
 - ▶ Remove the trailer cable or adapter plug.
 - ▶ Pull switch ② until the ball neck unlocks. The ball neck will fold out from under the rear bumper.
- Indicator lamp ① will flash.

- ▶ Pull the ball neck in the direction of the arrow until it engages audibly in a vertical position. Indicator lamp ① on the ball neck release switch will go out.
- If the ball neck is not securely locked in place, the **Trailer coupling Check lock** message will appear on the driver's display.
- ▶ Remove the cover cap from the ball head and store it in a safe place.

Make sure that the ball on the ball neck is clean. Check that it is either greased or dry (grease-free), depending on the instructions for the trailer.

Folding the ball neck in

- ▶ Pull switch ② until the ball neck unlocks. The ball neck will fold up under the rear bumper.
- Indicator lamp ① will flash.

- ▶ Push the ball neck in the direction of the arrow until it engages audibly behind the bumper. Indicator lamp ❶ will go out and the message on the driver's display will disappear.

Observe the information about indicators on the driver's display:

- Indicator and warning lamps (→ page 739)

- Display messages (→ page 675)

Overview of tie-down eyes

Observe the notes on loading the vehicle (→ page 170).

- ❶ Tie-down eyes (vehicles with through-loading feature in the rear bench seat)

Overview of the front storage compartments

⚠ WARNING Risk of injury due to objects being stowed incorrectly

If objects in the vehicle interior are stowed incorrectly, they can slide or be thrown around and hit vehicle occupants. In addition, cup holders, open stowage spaces and mobile phone receptacles cannot always retain all objects within.

There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- ▶ Always stow objects so that they cannot be thrown around in such situations.
- ▶ Always make sure that objects do not protrude from stowage spaces, luggage nets or stowage nets.
- ▶ Close the lockable stowage spaces before starting a journey.
- ▶ Always stow and secure heavy, hard, pointed, sharp-edged, fragile or bulky objects in the boot/load compartment.

Observe the notes on loading the vehicle.

- ① Storage spaces in the doors
- ② Storage compartment in the armrest with a multimedia and USB connection
- ③ Storage compartment in the front centre console with a USB port
- ④ Glove compartment

Locking/unlocking the glove compartment

⚠ WARNING Risk of injury due to objects being stowed incorrectly

If objects in the vehicle interior are stowed incorrectly, they can slide or be thrown around and hit vehicle occupants. In addition, cup holders, open stowage spaces and mobile phone brackets cannot always retain all objects they contain.

There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- ▶ Always stow objects in such a way that they cannot be thrown around in such situations.
- ▶ Always make sure that objects do not protrude from stowage spaces, luggage nets or stowage nets.
- ▶ Close the lockable stowage spaces before starting a journey.

- ▶ Always stow and secure heavy, hard, pointed, sharp-edged, fragile or bulky objects in the boot.

Observe the notes on loading the vehicle.

- ▶ Turn the emergency key a quarter turn clockwise **2** (to lock) or anti-clockwise **1** (to unlock).

Ice and snow

Notes on regularly inspecting wheels and tyres

⚠ WARNING Risk of injury due to damaged tyres

Damaged tyres can cause tyre pressure loss.

- ▶ Check the tyres regularly for signs of damage and replace any damaged tyres immediately.

⚠ WARNING Risk of aquaplaning due to insufficient tyre tread

Insufficient tyre tread will result in reduced tyre grip.

The risk of aquaplaning is increased on wet roads, especially when the speed of the vehicle is not adapted to suit the conditions.

- ▶ Thus, you should regularly check the tread depth and the condition of the tread across the entire width of all tyres.

Minimum tread depth for:

- Summer tyres: 3 mm
- M+S tyres: 4 mm

▶ For safety reasons, replace the tyres before the legally-prescribed limit for the minimum tread depth is reached.

Carry out the following checks on all wheels regularly, at least once a month or as required, for example, prior to a long journey or driving off-road:

- Check the tyre pressure (→ page 531).
- Visually inspect wheels and tyres for damage.
- Check the valve caps.
- Visual check of the tyre tread depth and the tyre contact surface across the entire width.
The minimum tread depth for summer tyres is 3 mm and for winter tyres 4 mm.

Setting the speed limit for winter tyres

Multimedia system:

→  ▶ Settings ▶ Vehicle ▶ Driving
▶ Winter tyre limit

▶ Activate or deactivate **Winter tyre limit**.

Setting a speed

- ▶ Select **Winter tyre limit**.
- ▶ Select a speed.

Notes on snow chains

⚠ WARNING Risk of accident due to incorrectly fitted snow chains

If you have fitted snow chains to the rear wheels, they may drag against the vehicle body or chassis components.

- ▶ Never fit snow chains on the rear wheels.
- ▶ Only fit snow chains on the front wheels in pairs.

! **NOTE** Damage to vehicle body or suspension components caused by fitted snow chains

On 4MATIC vehicles, if you fit snow chains on the rear wheels, you can damage vehicle body or suspension components.

▶ On 4MATIC vehicles, only fit snow chains on the front wheels.

Observe the following notes when using snow chains:

- Snow chains are only permissible for certain wheel/tyre combinations. You can obtain information about this from a Mercedes-Benz Service Centre.
- For safety reasons, only use snow chains that have been specifically approved for your vehicle by Mercedes-Benz, or snow chains with the same quality standard.
- If snow chains are fitted, the maximum permissible speed is 50 km/h.

- **Vehicles with Active Parking Assist:** do not use Active Parking Assist when snow chains are fitted.

- ① You can permanently limit the speed for driving with winter tyres (→ page 276).
- ① You can deactivate ESP® to start off (→ page 269). This allows the wheels to spin, achieving increased tractive power.

Notes on windscreen washer fluid

Observe the notes on operating fluids (→ page 667).

! **WARNING** Risk of fire and injury from windscreen washer concentrate

Windscreen washer concentrate is highly flammable. If it comes into contact with hot components, it may ignite.

▶ Make sure that windscreen washer concentrate is not spilled near to the filler opening.

! **NOTE** Damage to the exterior lighting due to unsuitable windscreen washer fluid

Unsuitable windscreen washer fluids may damage the plastic surface of the exterior lighting.

▶ Only use windscreen washer fluids which are also suitable for use on plastic surfaces, e.g. MB SummerFit or MB WinterFit.

! **NOTE** Blocked spray nozzles caused by mixing windscreen washer fluids

▶ Do not mix MB SummerFit and MB WinterFit with other windscreen washer fluids.

Do not use distilled or de-ionised water. Otherwise, the fill level sensor may be triggered erroneously.

Recommended windscreen washer fluid:

- above freezing point: e.g. MB SummerFit
- below freezing point: e.g. MB WinterFit

For the correct mixing ratio, refer to the information on the antifreeze container.

Mix washer fluid with windscreen washer fluid all year round.

Topping up the windscreen washer system

⚠ DANGER Risk of fatal injuries when carrying out maintenance work during the charging process

During the charging process, the high-voltage on-board electrical system is under high voltage.

- ▶ Do not perform any maintenance work during the charging process.

⚠ WARNING Risk of injury due to overheated vehicle

If you open the bonnet in the event of an overheated vehicle or fire in the engine compartment, the following situations may occur:

- You may come into contact with hot gases.
- You may come into contact with other escaping hot operating fluids.
- ▶ In the event of overheating or fire in the engine compartment, keep the bonnet closed and call the fire service.
- ▶ Allow the overheated vehicle to cool down first if you need to open the bonnet.

⚠ WARNING Risk of injury due to moving parts

Components in the engine compartment may continue to run or start unexpectedly even when the drive system is switched off.

Observe the following if you must open the bonnet:

- ▶ Switch off the vehicle.
- ▶ Never touch the danger zones surrounding moving components, e.g. the rotation area of the fan.
- ▶ Remove jewellery and watches.
- ▶ Keep items of clothing and hair away from moving parts.

⚠ WARNING Risk of burns from hot components in the engine compartment

Certain components in the engine compartment can be very hot, e.g. the drive system and the cooler.

- ▶ Allow the drive system to cool down and touch only the components described below.

⚠ WARNING Risk of fire and injury from windscreen washer concentrate

Windscreen washer concentrate is highly flammable.

- ▶ Avoid fire, naked flames, smoking and the creation of sparks when using windscreen washer concentrate.

- ▶ Remove cap ① by the tab.
- ▶ Top up the washer fluid.

Replacing the windscreen wiper blades

⚠ WARNING Risk of becoming trapped if the windscreen wipers are switched on while wiper blades are being replaced

If the windscreen wipers begin to move while you are changing the wiper blades, you can be trapped by the wiper arm.

- ▶ Always switch off the windscreen wipers and vehicle before changing the wiper blades.

Moving the wiper arms into the replacement position

- ▶ Switch the vehicle on and then off again immediately.

- ▶ Within around 15 seconds, press and hold the  button on the combination switch for approximately three seconds (→ page 198). The wiper arms will move into the replacement position.

- ① Check the condition of the wiper blades regularly and replace them in the event of visible damage or ongoing smearing.
- ▶ Observe the information about the service indicator.

Service indicator

- ▶ Remove protective film ① from the service indicators on the tips of the newly fitted wiper blades.

When the colour of the service indicators changes from black to yellow, replace the wiper blades.

- ① The time until the colour changes varies depending on the usage conditions.

Help in the event of a breakdown

Activating/deactivating the hazard warning lights

- ▶ Press button ①.

The hazard warning lights will switch on automatically if:

- the airbag has been deployed.

- the vehicle is braked heavily from a speed of more than 70 km/h to a standstill.

When you pull away again, the hazard warning light system will switch off automatically at approximately 10 km/h. You can also switch off the hazard warning light system using button ①.

Removing the fire extinguisher

- ⚠ **WARNING** Risk of accident due to an incorrectly secured fire extinguisher in the driver's footwell

A fire extinguisher may impede pedal travel or block a depressed pedal.

This jeopardises the operating and road safety of the vehicle.

The fire extinguisher can be flung around and injure the driver or other vehicle occupants.

- ▶ Always store and secure the fire extinguisher in the bracket.
- ▶ Do not remove the fire extinguisher while driving.

- ▶ Pull the tab ① upwards.
- ▶ Fold tab ① down.
- ▶ Remove fire extinguisher ②.

Removing the safety vest

There is a high-visibility waistcoat compartment on the door shelves of all doors for storing a high-visibility waistcoat.

- ▶ To remove: pull out safety vest bag ① by loop ②.
- ▶ Open the safety vest bag ① and pull out the safety vest.
- ▶ Replace: Fold up the safety vest, roll it up and place it in the safety vest ①.

▶ Slide the safety vest bag ① along the lower edge of the armrest into the safety vest compartment. Ensure that the loop ② hangs out so that it is easy to reach.

ⓘ Remove the packaging film before sliding it into the safety vest compartment for a new safety vest. Otherwise, it may cause unintentional slipping or make removing difficult. Observe the legal requirements in the individual countries.

- ① Maximum number of washes
- ② Maximum wash temperature
- ③ Do not bleach
- ④ Do not iron

- ⑤ Do not tumble dry
- ⑥ Do not dry clean
- ⑦ Class 2 safety vest

The requirements defined by the legal standard are only fulfilled if the safety vest is the correct size and is fully closed.

Replace the safety vest in the following cases:

- The reflective strips are damaged or dirty
- The maximum permissible number of washes is exceeded
- The fluorescence property decreases, e.g. due to permanent exposure to sunlight.

Dispose of the safety vest in an environmentally friendly way:

- Please contact your local waste disposal company.

Removing the warning triangle

- ▶ Open the load compartment floor.
- ▶ Remove warning triangle ①.

First-aid kit (soft-sided) overview

First-aid kit (soft-sided) ① is located in the stowage net on the left-hand side of the load compartment.

QR code for rescue card

QR codes are attached in the socket flap and on the opposite side on the B-pillar. In the event of an accident, rescue services can use the QR code to quickly find the appropriate rescue card for your vehicle. The current rescue card contains the most important information about your vehicle

(e.g. the routing of the electric lines) in compact form.

Further information can be obtained at <https://www.mercedes-benz.de/qr-code>

Starting assistance and charging the 12 V battery

- ▶ Only have starting assistance provided by a qualified specialist workshop, e.g. a Mercedes-Benz Service Centre.
- ▶ Only have the battery charged at a qualified specialist workshop, e.g. a Mercedes-Benz Service Centre.

Notes on electrical fuses

⚠ WARNING Risk of accident and injury due to overloaded lines

If you manipulate or bridge a faulty fuse or if you replace it with a fuse with a higher amperage, the electric line could be overloaded.

This could result in a fire.

▶ Always replace faulty fuses with specified new fuses containing the correct amperage.

⚠ NOTE Damage due to incorrect fuses

Using incorrect fuses can result in damage to electrical components or systems or their functions being considerably restricted.

▶ Use only fuses approved for Mercedes-Benz with the respective specified fuse rating.

Blown fuses must be replaced with fuses of the same rating, which you can recognise by the colour and the label. The fuse ratings and further information to be observed can be found in the fuse assignment diagram.

Fuse assignment diagram: on the fuse box in the engine compartment (→ page 527).

⚠ NOTE Damage or malfunctions caused by moisture

Moisture may cause damage to the electrical system or cause it to malfunction.

- ▶ When the fuse box is open, make sure that no moisture can enter the fuse box.
- ▶ When closing the fuse box, make sure that the seal of the lid is positioned correctly on the fuse box.

If the newly inserted fuse also blows, have the cause traced and rectified at a qualified specialist workshop.

Ensure the following before replacing a fuse:

- The vehicle is secured against rolling away.
- All electrical consumers are switched off.
- The vehicle is switched off.

The electrical fuses are located in various fuse boxes:

- Fuse box in the engine compartment on the left-hand side of the vehicle, when viewed in the direction of travel (→ page 527)

- Fuse box in the front passenger footwell (→ page 528)
- Fuse box in the centre of the load compartment (→ page 529)

Notes on flat tyres

⚠ WARNING Risk of accident due to a flat tyre

A flat tyre severely affects the driving characteristics as well as steering and braking.

tyres that do not feature run-flat characteristics:

- ▶ Do not drive on with a flat tyre.
- ▶ Change the flat tyre immediately with an emergency spare wheel or spare wheel. Alternatively, consult a qualified specialist workshop.

Run-flat tyres:

- ▶ Observe the information and warning notes on MOExtended tyres (run-flat tyres).

In the event of a flat tyre, the following options are available depending on your vehicle's equipment:

- **Vehicles with MOExtended tyres:** it is possible to continue the journey for a short period of time. Make sure you observe the notes on MOExtended tyres (run-flat tyres) (→ page 511).
 - **Vehicles with a TIREFIT kit:** you can seal the tyre so that it is possible to continue the journey for a short period of time. To do this, use the TIREFIT kit (→ page 513).
 - (→ page 454) **Vehicles with Mercedes me connect:** you can make a call for breakdown assistance via the overhead control panel in the case of a breakdown .
 - **All vehicles:** change the wheel (→ page 538).
- i** (→ page 543) The emergency spare wheel is only available in certain countries.

Overview of the tyre-change tool kit

Apart from some country-specific variants, vehicles are not equipped with a tyre-change tool kit.

For more information on which tyre-changing tools are required and approved for performing a wheel change on your vehicle, consult a qualified specialist workshop.

You require the following tools, forexample, to change a wheel:

- Jack
- Chock
- Wheel wrench
- Centring pin

- i** The jack weighs approximately 3.4 kg. The maximum load capacity of the jack can be found on the sticker affixed to the jack. The jack is maintenance-free. If there is a malfunction, please contact a qualified specialist workshop.

The tyre-change tool kit is located in tool bag **i** in the load compartment.

- i** When stowing the tool bag, make sure that it is adequately secured.

The tool bag contains:

- Jack
- Gloves
- Wheel wrench
- Centring pin
- Folding chock
- Ratchet for jack

TIREFIT kit storage location

The TIREFIT kit is located under the load compartment floor.

- ① Tyre inflation compressor
- ② Tyre sealant bottle

Depending on the vehicle version, the TIREFIT kit may be located in other positions in the load compartment.

- ⓘ You can find information on the power category (LK) and/or electrical data on the back of the tyre inflation compressor:
 - LK2 - 12 V/15 A, 180 W, 0.8 kg

At a distance of approximately 1 m to the tyre inflation compressor and approximately 1.6 m above the ground, the following sound pressure levels apply:

- Emission sound pressure level L_{PA} 83 dB (A)
- Sound power level L_{WA} 91 dB (A)

The tyre inflation compressor is maintenance-free. If there is a malfunction, please contact a qualified specialist workshop.

Towing the vehicle with both axles on the ground

- ▶ Observe the notes on the permitted towing methods (→ page 521).
- ▶ Make sure that the 12-V-battery is connected and charged

Observe the following points when the 12-V-battery is disconnected or discharged

- the drive system cannot be started
- the electric parking brake cannot be released or applied

- The selector lever cannot be put into position **N** or **P**.

Only one transport is permitted when at least one of the following conditions occur:

- If the selector lever cannot be put into position **N**.
- if the 12-V-battery is disconnected or discharged.
- if the display in the instrument cluster is not working
- if the  **Towing not permitted See Owner's Manual** message is displayed
- if the  **Top up coolant See Owner's Manual** message is displayed
- if the  **Stop Switch off the vehicle** message is displayed

- ▶ In such cases, transport the vehicle (→ page 524).

! **NOTE** Damage due to towing away at excessively high speeds or over long distances

The drivetrain could be damaged when towing at excessively high speeds or over long distances.

- ▶ A towing speed of 50 km/h must not be exceeded.
- ▶ A towing distance of 50 km must not be exceeded.

! **WARNING** Risk of accident when towing a vehicle which is too heavy

If the vehicle to be tow-started or towed away is heavier than the permissible gross mass of your vehicle, the following situations can occur:

- the towing eye may become detached.
- the vehicle/trailer combination may swerve or overturn.
- ▶ Before tow-starting or towing away, check if the vehicle to be tow-started or

towed away exceeds the permissible gross mass.

If a vehicle has to be tow-started or towed away, its permissible gross mass must not exceed the permissible gross mass of the towing vehicle.

- ▶ Information on the permissible gross mass of the vehicle can be found on the vehicle identification plate (→ page 666).

Towing away the vehicle

- ▶ Fit the towing eye (→ page 525).
- ▶ Fasten the towing device.

! **NOTE** Damage due to incorrect connection of the tow bar

- ▶ Only connect the tow rope or tow bar to the towing eyes.

- ▶ Deactivate the automatic locking mechanism (→ page 132).
- ▶ Do not activate the HOLD function.

- ▶ Deactivate tow-away protection (→ page 149).
- ▶ Deactivate Active Brake Assist (→ page 293).
- ▶ Put the selector lever into position **N**.
- ▶ Release the electric parking brake.
- ▶ Remain in the cockpit during towing and observe the display messages.
- ▶ Do not switch off the vehicle while it is being towed.
- ▶ Do not open the driver's door or front passenger door, because otherwise the selector lever automatically switches to position **P**.

⚠ WARNING Risk of accident due to limited safety-related functions during the towing process

Safety-related functions are limited or no longer available in the following situations:

- the vehicle is switched off.

- the brake system or power steering system is malfunctioning.
 - the energy supply or the on-board electrical system is malfunctioning.
- ▶ In such cases, do not tow the vehicle.

- ▶ Transport the vehicle (→ page 524).

⚠ NOTE Damage to the drive system due to incorrect towing

The vehicle must not be towed in the following situations:

- The vehicle is switched off.
 - The brake system or the power steering is faulty.
 - The power supply or the on-board electrical system is faulty.
- ▶ Do not tow the vehicle in these situations.

⚠ NOTE Damage due to excessive tractive power

If you pull away sharply, the tractive power may be too high and the vehicles could be damaged.

- ▶ Pull away slowly and smoothly.

Expert tips

Additional functions of buttons

▶ **Opening and closing the windows using the air-recirculation button (convenience closing/opening)**

When air-recirculation mode is activated, the side windows close automatically, for example, before entering a tunnel. When the air-recirculation mode is deactivated, the side windows move back to their original position.

⚠ WARNING Risk of entrapment due to not paying attention during convenience closing

When the convenience closing feature is operating, parts of the body could become trapped in the closing area of the side window and the sliding sunroof.

- ▶ When the convenience closing feature is operating, monitor the entire closing process and make sure that no body parts are in the closing area.

⚠ WARNING Risk of entrapment due to not paying attention during convenience closing

When the convenience closing feature is operating, parts of the body could become trapped in the closing area of the side windows.

- ▶ When the convenience closing feature is operating, monitor the entire closing process and make sure that no body parts are in the closing area.

- ▶ **To close the windows:** press and hold the  button until the windows start to move. The windows close and air-recirculation mode switches on.

⚠ WARNING Risk of entrapment from the convenience opening feature

During convenience opening parts of the body could be drawn in or become trapped between the side window and window frame.

- ▶ When opening, make sure that nobody is touching the side windows.
- ▶ If someone becomes trapped, immediately press the  button in the door to open the side windows. The side windows stop.
- ▶ To continue closing the side windows, pull on the  button.

- ▶ **To reopen closed windows:** press and hold the  button until the windows start to move. The windows move back to their original position and air-recirculation mode switches off.

Vehicles with a sliding sunroof: the sliding sunroof closes or opens simultaneously.

If body parts become entrapped in the sliding sunroof:

- ▶ **To stop:** press the  button.
- ▶ **To open:** pull the  button back.

Resetting the climate control settings

- ▶ Press and hold the **AUTO** button on the front control panel for four seconds. The climate control settings will be reset to the basic settings.

Activating/deactivating traffic announcements

Multimedia system:

- ▶ Select **Radio announcements**. The traffic information service is switched on or off.

Useful vehicle functions

Notes about the automatically active rear window wiper

The rear window wiper will automatically be active if the following conditions are met at the same time:

- The front windscreen wiper is switched on
- Reverse gear is engaged

Storing the parking position of the front-passenger outside mirror using the memory button

Requirements:

- Reverse gear has not been engaged.

- ▶ Select the front-passenger outside mirror using button ①.
- ▶ Move the front-passenger outside mirror into the desired parking position using button ②.
- ▶ Press the **M** button.
- ▶ Confirm immediately using button ② to store the setting.

- ⓘ No more than three seconds may pass between the **M** button and button ② being pressed. The mirror adjustment will be cancelled after three seconds.

Good to know

Deactivating the function of the key

Vehicles with KEYLESS-GO: if you deactivate the function of the key, the KEYLESS-GO functions are also deactivated. Access or drive authorization via KEYLESS-GO is then no longer possible with that key. Activate the function of the key so that all of its functions are available once again.

You can also deactivate the key's function to reduce the key's energy consumption if you do not use the vehicle or a key for an extended period of time.

- ▶ Press and hold the key button **Ⓚ**.
- ▶ With the key button **Ⓚ** pressed, immediately press key button **Ⓚ** twice in quick succession.
The indicator light of the key lights up once briefly, and then again for longer.

i You have the following options to reactivate the key:

- Press any button on the key.
- Start the vehicle with the key in the centre console storage compartment (→ page 218).

■ Overview of emergency call systems

Both the Mercedes-Benz emergency call system as well as the 112 emergency call system (EU eCall) can help to reduce the time between an accident and the arrival of emergency services at the site of the accident. They help locate an accident site in places that are difficult to access.

Both emergency call systems can initiate an emergency call automatically (→ page 464) or manually (→ page 464).

Only make emergency calls if you or others are in need of rescue. Do not make an emergency call in the event of a breakdown or a similar situation.

Indicators in the displays

The following messages appear on the central display or the media display of both emergency call systems:

- **SOS NOT READY**: the vehicle is not switched on or the emergency call system is malfunctioning. This does not necessarily indicate complete failure of the emergency call system. Emergency calls can still be transmitted.

The display only refers to the vehicle and does not take account of the availability of mobile phone networks and the Mercedes-Benz emergency call centre.

The functional readiness of the emergency call system on the vehicle can be seen when the **SOS NOT READY** display disappears once the vehicle is switched on.

-  **SOS**: the icon appears in the display during an active emergency call.

i If there is a malfunction of the emergency call system, the loudspeakers, microphone, airbag or the SOS button, for example, are faulty.

You can recognise a fault in the emergency call system by the following displays:

- A corresponding message will also appear in the driver display.
- The SOS button lights up red continuously.

■ Emergency guide

In the event of an accident or breakdown, the emergency guide shows safety notes on the central display.

These include, for example:

- Recommended actions when leaving the vehicle
- Procedure for safely removing seat belts in the event of an accident whereby the vehicle comes to rest on its roof

The emergency guide is activated in the following situations:

- Occupant protection system has been triggered
- An emergency call is made
- Certain breakdown situations

-  The availability as well as the scope of the emergency guide can vary depending in the country and vehicle equipment.

Calling up the Digital Owner's Manual

Multimedia system:

- ➔  ➔ Settings ➔ Info
- ➔➔ Owner's Manual
- ➔➔ Open Digital Owner's Manual

The Digital Owner's Manual describes the functions and operation of the vehicle and the multimedia system.

▶ Select one of the following menu items in the Digital Owner's Manual:

- **Quick start:** find the first steps towards adjusting your seat (driver's side).
- **Tips:** find information that prepares you for certain everyday situations with your vehicle.
- **Animations:** watch animations of the vehicle functions.
- **Messages:** receive additional information about the messages in the driver's display.
- **Language:** select the language for the Digital Owner's Manual.

You can search for keywords using the search field **Search**, in order to find quick answers to questions about the operation of the vehicle.

- ① Menu
- ② Search
- ③ Back
- ④ Contents section

Some sections in the Digital Owner's Manual, such as warning notes, can be expanded and collapsed.

Additional methods of calling up the Digital Owner's Manual:

Driver's display: call up brief information as display messages in the driver's display

MBUX Voice Assistant: call up via the voice control system

Global search: call up search results for contents of the Digital Owner's Manual in the home screen

For safety reasons, the Digital Owner's Manual is deactivated while driving.

Protection of the environment

 **ENVIRONMENTAL NOTE** Environmental damage due to operating conditions and personal driving style

Operate your vehicle in an environmentally responsible manner to help protect the environment. Please observe the following recommendations on operating conditions and personal driving style.

Operating conditions:

- ▶ Make sure that the tyre pressure is correct.
- ▶ Do not carry any unnecessary weight (e.g. roof luggage racks once you no longer need them).
- ▶ Monitor energy consumption.
- ▶ Adhere to the service intervals. A regularly serviced vehicle will contribute to environmental protection.
- ▶ Always have maintenance work carried out at a qualified specialist workshop.

Personal driving style:

- ▶ Drive carefully and maintain a suitable distance from the vehicle in front.
- ▶ Avoid frequent, sudden acceleration and braking.
- ▶ Drive in a way that conserves energy. Observe the ECO display for an economical driving style.

 **ENVIRONMENTAL NOTE** Environmental pollution caused by irresponsible disposal of the high-voltage battery

A high-voltage battery contains materials which are harmful to the environment.

- ▶ Dispose of faulty high-voltage batteries at a qualified specialist workshop.

Take-back of end-of-life vehicles

EU countries only:

Mercedes-Benz will take back your end-of-life vehicle for environment-friendly disposal in

accordance with the European Union (EU) End-Of-Life Vehicles Directive.

A network of vehicle take-back points and dismantlers has been established for you to return your vehicle. You can leave it at any of these points free of charge. This makes an important contribution to closing the recycling circle and conserving resources.

For further information about the recycling and disposal of end-of-life vehicles, and the take-back conditions, please visit the national Mercedes-Benz website for your country.

Mercedes-Benz GenuineParts

 **ENVIRONMENTAL NOTE** Environmental damage caused by not using recycled/reconditioned components

Mercedes-Benz AG offers recycled/reconditioned components and parts with the same quality as new parts. The same entitlement from the implied warranty is valid as for new parts.

▶ Recycled reconditioned components and parts from Mercedes-Benz AG.

! **NOTE** Impairment of the operating efficiency of the restraint systems from installing accessory parts or from repairs or welding

Airbags and seat belt tensioners, as well as control units and sensors for the restraint systems, may be installed in the following areas of your vehicle:

- doors
- door pillars
- Sill
- Seats
- Cockpit
- Instrument display
- Centre console
- lateral roof frame

▶ Do not install accessory parts such as audio systems in these areas.

▶ Do not carry out repairs or welding.

▶ Have accessories retrofitted at a qualified specialist workshop.

You could jeopardise the operating safety of your vehicle if you use parts, tyres and wheels as well as accessories relevant to safety that have not been approved by Mercedes-Benz. Safety-critical systems (e.g. the brake system) may malfunction. Use only Mercedes-Benz GenuineParts or parts of equal quality. Use only tyres, wheels and accessory parts that have been specifically approved for your vehicle model.

Mercedes-Benz tests original parts and conversion parts and accessory parts that have been specifically approved for your vehicle model for their reliability, safety and suitability. Despite ongoing market research, Mercedes-Benz is unable to assess other parts. Mercedes-Benz therefore accepts no responsibility for the use of such parts in Mercedes-Benz vehicles, even if

they have been officially approved or independently approved by a testing centre.

Certain parts are officially approved for installation or modification only if they comply with legal requirements. All Mercedes-Benz GenuineParts meet the approval requirements. The use of non-approved parts may invalidate the vehicle's general operating permit.

This is the case in the following situations:

- The vehicle type is different from that for which the vehicle's general operating permit was granted.
- Other road users could be endangered.
- The noise level gets worse.

Always specify the vehicle identification number (VIN) (→ page 666) when ordering Mercedes-Benz GenuineParts.

Touch-sensitive control elements

In addition to conventional switches and buttons, your vehicle is equipped with touch-sensitive control elements.

These are located in the following areas of your vehicle:

- Roof and door operating unit
- Climate control
- Steering wheel
- MBUX multimedia system

The control elements feature touch-sensitive user interface surfaces. These surfaces are controlled by pressing or swiping to adjust settings or trigger functions, foreexample.

In the touchscreen area, haptic acknowledgement is relayed through the touch-sensitive surface, foreexample in the form of a pulse or a vibration, or a change in user interface surface structure.

Haptic acknowledgement is relayed in the following situations, foreexample:

- When pressing a button on the user interface surface
- When scrolling in a list or table
- When reaching a new area on the user interface surface, e.g. a pop-up window

When using touch-sensitive user interface surfaces, observe the following points to avoid operational problems:

- Do not affix stickers or similar objects on the surfaces
- Do not attach a smartphone- or other holders to the surface of the central display.
- Protect the surfaces against moisture and wet conditions.
- Keep the surfaces free of dust and dirt (→ page 505).

In addition to a symbol, some touch-sensitive control elements also feature integrated indicator lamps. Ensure that the symbol of the control element is pressed during use.

Mercedes me App

Notes about the on-demand feature

You can also activate various functions (on-demand feature) subsequently via Mercedes me after purchasing your vehicle.

Information is available at any Mercedes-Benz Service Centre.

Activating on-demand feature using Mercedes me

Requirements

- The vehicle has a wireless connection.
- The vehicle is linked to the Mercedes me user account.

Ordering and activating on-demand feature

- ▶ Add the desired on-demand feature for the vehicle to the shopping basket in the Mercedes me Store.
- ▶ Complete the order. The on-demand feature is activated when operating the vehicle.

Speeding up activation

- ▶ Switch the vehicle off and lock it.

- ▶ Unlock the vehicle after about two minutes and switch on the vehicle. The on-demand feature has been activated. For some features, a notification also appears in the vehicle's multimedia system.

If the activation was not successful, repeat the process.

Operating safety

⚠ WARNING Risk of accident due to malfunctions or system failures

If you do not have the prescribed service/maintenance work or any required repairs carried out, this could result in malfunctions or system failures.

- ▶ Always have the prescribed service- and maintenance work or any required repairs carried out in a qualified workshop.

⚠ WARNING Risk of accident or injury due to improper modifications to electronic components

Modifications to electronic components, their software or wiring can impair their functionality and/or the functionality of other networked components or safety-relevant systems.

This can endanger the vehicle's operating safety.

- ▶ You must not tamper with wiring, electronic components, or their software.
- ▶ Always have work on electrical and electronic devices carried out at a qualified specialist workshop.

If you modify the on-board electronics, the general operating permit is rendered invalid.

Observe the "On-board electronics" section in "Technical data".

! NOTE Impairment of the operating efficiency of the vehicle or individual components due to tampering with the on-board electronics

The vehicle is equipped by the manufacturer with various safety mechanisms that interact with each other.

If the system detects tampering with the on-board electronics due to an unauthorised modification of control units and/or their software/data, this may have the following effects:

- Individual vehicle functions are (temporarily) no longer operational.
 - The overall vehicle is (temporarily) no longer operational.
- ▶ Have the vehicle checked immediately at a qualified specialist workshop and, if necessary, reset to factory settings.

! **NOTE** Damage to the vehicle due to driving too fast and due to impacts to the vehicle underbody and suspension components

In the following situations, in particular, there is a risk of damage to the vehicle:

- the vehicle becomes grounded, e.g. on a high kerb or an unpaved road
- the vehicle is driven too fast over an obstacle, e.g. a kerb, speed bump or pothole
- a heavy object strikes the underbody or suspension components

In situations such as these, damage to the body, underbody, suspension components, wheels or tyres and high-voltage battery components may not be visible. Components damaged in this way can unexpectedly fail or, in the case of an accident, may no longer absorb the resulting force as intended.

- ▶ Have the vehicle checked and repaired immediately at a qualified specialist workshop.

or

- ▶ If driving safety is impaired while continuing your journey, pull over and stop the vehicle immediately, while paying attention to road and traffic conditions, and contact a qualified specialist workshop.

Electric vehicles have an electric motor. The energy supply for the electric motor comes from the high-voltage onboard electrical system.

! **DANGER** Risk of death and fire due to modified and/or damaged components of the high-voltage on-board electrical system

The vehicle's high-voltage on-board electrical system is under high voltage. If you modify component parts in the vehicle's high-voltage on-board electrical system or touch damaged component parts, you may be electrocuted. In addition, modified and/or damaged components may cause a fire.

In the event of an accident or impact to the underbody, components of the high-voltage on-board electrical system may be damaged although the damage is not visible.

- ▶ Never make any modifications to the high-voltage on-board electrical system.
- ▶ Do not switch on or use the vehicle if its high-voltage on-board electrical system components have been modified or damaged.
- ▶ Never touch damaged components of the high-voltage on-board electrical system.
- ▶ After an accident, do not touch any components of the high-voltage on-board electrical system.
- ▶ After an accident, have the vehicle transported away.
- ▶ Have the components of the high-voltage on-board electrical system checked at a qualified specialist workshop and replaced if necessary.

The components of the high-voltage onboard electrical system are marked with yellow warning stickers. The cables of the high-voltage onboard electrical system are orange.

High-voltage components that can become very hot are marked with a separate warning sticker:

Example

Vehicles with an electric motor generate significantly less vehicle noise emissions than vehicles with combustion engines.

This means that other road users may fail to hear the vehicle owing to its significantly lower driving noise.

It is for this reason that the vehicle is equipped with a sound generator, which serves as an acoustic vehicle alerting system (AVAS). This protective measure is prescribed by law.

This exterior noise by the sound generator (AVAS) is audible in the vehicle interior at low speeds, and is not a malfunction.

Fitting the licence plate onto the front licence plate bracket

! **NOTE** Malfunctions and system failures due to incorrect assembly of the licence plate on the front licence plate holder

If the licence plate is incorrectly assembled on the front licence plate holder, sensors, cameras or driving and safety systems may malfunction or fail.

Observe the following points when assembling the licence plate on the front licence plate holder:

- ▶ Assemble the licence plate directly on the licence plate holder without advertising media or other holders.
- ▶ Assemble the licence plate so that it does not protrude above or to the side of the licence plate adapter.

Declarations of conformity and notes on driving in different countries

Electromagnetic compatibility

The electromagnetic compatibility of the vehicle components has been checked and certified according to the currently valid version of Regulation UN-R 10.

Country-specific information for regulatory radio components

Notes when crossing national borders

You must observe the radio regulatory provisions for the country in which you are currently driving when operating the vehicle.

Wireless vehicle components

Only for EU and EFTA countries and countries that recognize the EU manufacturer's declaration of conformity:

The following information applies to all wireless components of the vehicle and of the information systems and communication devices integrated in the vehicle:

The manufacturers of the wireless components ensure that all wireless components installed in the vehicle comply with Directive 2014/53/EU. The full texts of the EU declarations of conformity are available at the following web address:

https://moba.i.mercedes-benz.com/markets/ece-row/baix/cars/certificates-of-conformity/en_GB/index.html

You can obtain further information from a Mercedes-Benz service centre.

For Israel only:

It is prohibited to make any change to a vehicle-installed radio component that could affect the wireless specifications of the device, including software changes, replacement of the original antenna, or adding the option to connect the device to an external antenna, without first obtain-

ing approval from the Communications Ministry, because of concern about wireless interference.

For the United Kingdom only:

The following information applies to all wireless components of the vehicle and of the information systems and communication devices integrated in the vehicle:

The manufacturers of the radio components declare that all radio equipment installed in the vehicle is in compliance with the relevant statutory requirements. The full texts of the declarations of conformity are available at the following web address:

https://moba.i.mercedes-benz.com/markets/ece-row/baix/cars/certificates-of-conformity/en_GB/index.html

For Brazil only:

Note on two-way radio systems in the vehicle:

These systems are not protected against harmful interference and must not cause interference in properly approved systems.

For Jamaica only:

All wireless vehicle components have received type approval from the SMA.

For Nigeria only:

Connection and use of the radio communications equipment in this vehicle is permitted by the Nigerian Communications Commission

For countries of the Eurasian Economic Union only:

The manufacturers of the wireless components installed in the vehicle hereby declare that all wireless components installed in the vehicle comply with the technical regulations for two-way radios. You can obtain further information from a Mercedes-Benz service centre.

For Ukraine only:

The manufacturers of the wireless components installed in the vehicle hereby declare that the wireless components installed in the vehicle comply with the technical regulations for two-way radios. You can obtain further information from a Mercedes-Benz service centre.

Jack

Only for EU and EFTA countries and countries that recognize the EU manufacturer's Declaration of Conformity:

CE Declaration of Conformity

Copy and translation of the original Declaration of Conformity:

EC Declaration of Conformity

1.

The signatory, as a representative

Manufacturer:

BRANO a.s.

747 41 Hradec nad Moravicí, Opavská 1000,
Czech Republic

ID No.: 64-387-5933

VAT Reg. No.: CZ64-387-5933

declares, as our sole responsibility, that the product:

2. a)

Description:

Jack

Type, number:

A) A 164 580 02 18, A 166 580 01 18

B) A 240 580 00 18

C) A 639 580 02 18

D) A 639 580 03 18

E) A 910 580 00 00

F) A 247 580 00 00, A 293 580 00 00

Diagnostics connection

The diagnostics connection is a technical interface in the vehicle. It is used, for example, in the context of repair and maintenance work or for reading out vehicle data in a specialist workshop. Diagnostic devices should therefore only be connected in a qualified specialist workshop.

⚠ WARNING Risk of accident due to connecting devices to the diagnostics connection

If you connect devices to the diagnostics connection of the vehicle, the function of vehicle systems and operating safety may be impaired.

- ▶ For safety reasons, we recommend that you only use and connect products approved by a Mercedes-Benz service centre.

⚠ WARNING Risk of accident due to objects in the driver's footwell

Objects in the driver's footwell may impede pedal travel or block a depressed pedal.

This will jeopardise the operating and road safety of the vehicle.

- ▶ Stow all objects in the vehicle securely so that they cannot get into the driver's footwell.
- ▶ Make sure that there is always sufficient clearance for the pedals.
- ▶ Always fit the floor mats securely and as prescribed.
- ▶ Do not use loose floor mats and do not place floor mats on top of one another.

! NOTE Battery discharging from using devices connected to the diagnostics connection

Using devices at the diagnostics connection drains the battery.

- ▶ Check the charge level of the battery.
- ▶ If the charge level is low, charge the battery, e.g. by driving a considerable distance.

Connecting and using another device with the diagnostics connection can have the following effects:

- Malfunctions in the vehicle system
- Permanent damage to vehicle components

Please refer to the warranty terms and conditions for this matter.

Qualified specialist workshop

A qualified specialist workshop has the necessary special skills, tools and qualifications to correctly carry out any necessary work on your vehicle. This particularly applies to safety-critical work.

Always have the following work carried out on your vehicle at a qualified specialist workshop:

- Safety-critical work
- Service and maintenance work
- Repair work
- Modifications as well as installations and conversions
- Work on electronic components

- Work on high-voltage components

Mercedes-Benz recommends a Mercedes-Benz service centre.

Vehicle registration

Mercedes-Benz may ask its service centres to carry out technical inspections on certain vehicles. The quality or safety of the vehicle is improved as a result of the inspection.

Mercedes-Benz can only inform you about vehicle checks if Mercedes-Benz has your registration data.

It is possible that your vehicle has not yet been registered in your name in the following cases:

- if your vehicle was not purchased at an authorised specialist dealer.
- if your vehicle has not yet been examined at a Mercedes-Benz service centre.

It is advisable to register your vehicle with a Mercedes-Benz service centre.

Inform Mercedes-Benz as soon as possible about any change in address or vehicle ownership. You

can do this at a Mercedes-Benz service centre, for example.

Correct use of the vehicle

If you remove any warning stickers, you or others could fail to recognise certain dangers. Leave warning stickers in position.

Observe the following information in particular when driving your vehicle:

- the safety notes in this Owner's Manual, vehicle-specific supplements and further supplementary documents
- technical data for the vehicle
- Traffic rules and -regulations of the country you are currently in
- Motor vehicle laws and safety standards of the country you are currently in
- Radio regulatory requirements of the country you are currently in

REACH regulation

For EU and EFTA countries only:

The REACH Regulation (Regulation (EC) No. 1907/2006, Article 33) stipulates a duty to supply information about substances of very high concern (SVHCs).

Mercedes-Benz AG acts to the best of its knowledge to prevent these SVHCs from being used and to enable customers to safely handle these substances. According to supplier information and internal product information, there are SVHCs known to Mercedes-Benz AG that are found in individual components of this vehicle in quantities of over 0.1 percent by weight.

Further information can be obtained at the following addresses:

- <https://reach.mercedes-benz.com/de/home/>
- <https://reach.mercedes-benz.com/en/home/>

Notes for persons with electronic medical aids

Mercedes-Benz AG cannot, despite carefully developing vehicle systems, completely rule out the interaction of vehicle systems with electronic medical aids such as cardiac pacemakers.

In addition, there are components installed in the vehicle that, regardless of the operating status of the vehicle, can generate magnetic fields on a par with permanent magnets. These fields can be found, for example, in the area around the multimedia and sound system or also in the area of the seats, depending on the vehicle equipment.

For this reason, the following can occur in isolated cases, depending on the aids used:

- Medical aids malfunctioning
- Adverse health effects

Observe the notes and warnings of the manufacturer of the medical aids; if in doubt, contact the device manufacturer and/or your doctor. If there is continuing uncertainty concerning the possibility of medical aids malfunctioning, Mercedes-Benz AG recommends using only few electrical

vehicle systems and/or maintaining a distance from the components.

When charging the high-voltage battery, keep a distance of at least an arm's length between the medical aid and the following components:

- the power supply equipment
This includes charging stations in the form of a wallbox or a public charging point, for example.
- vehicle components carrying live voltage
This includes the charging cable and the charging control box, for example.

Only have repairs and maintenance work in the area of the following components carried out at a qualified specialist workshop:

- vehicle components carrying live voltage
- transmission aerials
- multimedia system and sound system

If you have any queries or suggestions, consult a qualified specialist workshop.

Implied warranty

! **NOTE** Damage to the vehicle arising from violation of these operating instructions.

Damage to the vehicle can arise from violation of these operating instructions.

This damage is not covered either by the Mercedes-Benz implied warranty or by the New- or Used-Vehicle Warranty.

▶ Follow the instructions in these operating instructions on proper operation of your vehicle as well as on possible vehicle damage.

QR code for rescue card

QR codes are attached in the socket flap and on the opposite side on the B-pillar. In the event of an accident, rescue services can use the QR code to quickly find the appropriate rescue card for your vehicle. The current rescue card contains the most important information about your vehicle (e.g. the routing of the electric lines) in compact form.

Further information can be obtained at <https://www.mercedes-benz.de/qrcode>

Data storage

Data processing in the vehicle

Electronic control units

Electronic control units are fitted in your vehicle. Control units process data they receive, generate themselves or exchange with each other, for example from vehicle sensors. Some control units are required for the safe operation of your vehicle. For example, some assist you when driving, such as driver assistance systems, while others enable convenience or infotainment functions.

The following section provides general information about data processing in the vehicle. Additional information regarding which vehicle data is collected, saved and transmitted to third parties and for what purpose can be found in the information directly related to the relevant functional characteristics in the respective Owner's Manual. This information is available online and digitally, depending on the vehicle's equipment.

Personal data

A unique vehicle identification number identifies every vehicle. Depending on the country, this vehicle identification number can also be used to determine the identity of the vehicle keeper, e.g. by the authorities. There are also other ways of tracing data collected from the vehicle back to the keeper or driver, such as the license plate number.

The data generated or processed by control units may therefore be attributable to a person or, in certain circumstances, become attributable to a person. Depending on which vehicle data are available, it may be possible to make inferences about, for example, your driving behaviour, location, route or use patterns.

Legal requirements regarding the disclosure of data

If legally required to do so, manufacturers are generally obliged to provide the authorities with data stored by the manufacturer upon request and to the extent required. For example, this may be the case during the investigation of a criminal offence.

State authorities are themselves authorised to read out data from the vehicle in individual cases and within the applicable legal framework. In the case of an accident, information that can help with an investigation can be taken from the airbag control unit, for example.

Operational data in the vehicle

To operate the vehicle, control units process data.

This includes the following data, for example:

- Vehicle status information such as the speed, longitudinal acceleration, lateral acceleration, number of wheel revolutions or the fastened seat belts display
- Ambient conditions, such as temperature, rain sensor or distance sensor

Generally, this data is volatile and will not be stored beyond the period of operation and will only be processed within the vehicle itself. Control units, for example, vehicle keys, often contain data memories. Their use permits the temporary or permanent documentation of technical information about the vehicle's operating state, com-

ponent loads, maintenance requirements and technical events or faults.

Depending on the technical equipment, the following data are stored:

- Operating status of system components, such as fill levels, tyre pressure or battery status
- Malfunctions or faults in important system components, such as lights or brakes
- System reactions in special driving situations, such as an airbag deployment or the intervention of stability control systems
- Information on events leading to vehicle damage
- State of charge of the high-voltage battery, estimated range

In certain cases, storing data that would have otherwise been temporary may be required. This may be the case if the vehicle has detected a malfunction, for example.

If you make use of services, e.g. repair services, maintenance work, – the stored operating data can be read out and used together with the vehi-

cle identification number – if necessary. Service network employees such as workshops and manufacturers, and third parties such as breakdown services can read out the data. The same is true in the event of warranty claims and quality assurance measures.

In general, the readout is performed via the legally prescribed port for the diagnostics connection in the vehicle. The selected operating data document the vehicle's or individual components' technical conditions, help with fault diagnosis, compliance with warranty obligations and quality improvement. To that end, these data, particularly information about component loads, technical events, malfunctions and other faults, may be transmitted to the manufacturer along with the vehicle identification number. Furthermore, the manufacturer is subject to product liability. For this reason, the manufacturer also uses operational data from the vehicle, e.g. for recalls. This data can also be used to review the customer's warranty and guarantee claims.

Fault memories in the vehicle can be reset by a service outlet or at your request as part of repair or maintenance work.

Convenience and infotainment functions

You can store the vehicle's convenience and individual settings and change or reset them at any time.

Depending on the vehicle equipment, this includes the following settings, for example:

- Seat and steering wheel positions
- Suspension tuning and climate control settings
- Individual settings, such as interior lighting

Depending on the selected equipment, you can import data into vehicle infotainment functions yourself.

Depending on the vehicle equipment, this includes the following data, for example:

- Multimedia data, such as music, films or photos for playback in an integrated multimedia system
- Address book data for use in connection with an integrated hands-free system or an integrated navigation system
- Entered navigation destinations

- Data about the use of Internet services

This data for convenience and infotainment functions may be saved locally in the vehicle or on a device connected to the vehicle, such as a smartphone, USB flash drive or MP3 player. If you have entered this data yourself, you can delete it at any time.

This data is transmitted only from the vehicle to third parties at your request. This applies in particular when you use online services per your selected settings.

Smartphone integration (e.g. Android Auto or Apple CarPlay®)

If your vehicle is equipped accordingly, you can connect your smartphone or another mobile end device to the vehicle. You can then control them using the control elements integrated into the vehicle. Images and audio from the smartphone can be output via the multimedia system. Certain information is simultaneously transferred to your smartphone. Depending on the type of integration, this includes position data, day/night mode and other general vehicle statuses. For more

information, please consult the vehicle Owner's Manual/infotainment system.

This integration allows the use of selected smartphone apps, such as navigation or music player apps. There is no further interaction between the smartphone and the vehicle; in particular, vehicle data is not directly accessible. The type of additional data processing is determined by the provider of the app being used. The settings you can make, if any, depend on the specific app and your smartphone's operating system.

Online services

Wireless network connection

If your vehicle has a wireless network connection, it enables data to be exchanged between your vehicle and additional systems. The wireless network connection is made possible by the vehicle's own transmitter and receiver or by a mobile end device that you have brought into the vehicle, for example, a smartphone. Online functions can be used via the wireless network connection. This includes online services and applications/apps

provided to you by the manufacturer or by other providers.

Manufacturer's services

Regarding the manufacturer's online services, the individual functions are described by the manufacturer in a suitable place, for example, in the Owner's Manual or on the manufacturer's website, where the relevant data protection information is also given. Personal data may be used for the provision of online services. Data are exchanged via a secure connection, such as the manufacturer's designated IT systems. Any personal data which are collected, processed and used, other than for the provision of services, is done so exclusively on the basis of legal permission. This is the case, for example, for a legally prescribed emergency call system, a contractual agreement or when consent has been given.

You can have services and functions, some of which are subject to a fee, activated or deactivated. This excludes legally prescribed functions and services, such as an emergency call system.

Third party services

If you use online services from other providers (third parties), these services are the responsibility of the provider in question and subject to that provider's data protection conditions and terms of use. As a general rule, the manufacturer has no influence on the content exchanged.

For this reason, when services are provided by third parties, please ask the service provider in question for information about the type, extent and purpose of the collection and use of personal data.

Data protection rights

Depending on your country or the equipment and range of functions of your vehicle as well as the services you use and the services on offer, you are entitled to different data protection rights. Further information on data protection and your data protection rights can either be found on the manufacturer's website or you will receive this information as part of the various services and service offers. There you will also find the contact

information for the manufacturer and its data protection officers.

At a workshop, for example, with the support of a specialist and possibly for a fee, you can have data read out which is stored only locally in the vehicle.

Copyright

Information on licences for free and open-source software used in your vehicle can be found on the data carrier in your vehicle document wallet and with updates on the following website:

<https://www.mercedes-benz.com/opensource>

Brief overview of most important points

Basic information

Make sure that the following prerequisites in particular have been met so that the components of the restraint system are able to provide the intended level of protection:

- Sit correctly (→ page 86).
- Fasten the seat belt correctly (→ page 87).
 - Function of the  seat belt warning lamp (→ page 89).
 - Function of the rear seat belt status display (→ page 89).
- The  restraint system warning lamp has gone out after the self-test (→ page 88).
- The PASSENGER AIR BAG indicator lamps display the correct status of the front passenger airbag (→ page 90).

For clear understanding

The chapter "Occupant safety" includes information on equipment, functions and behaviours that contribute directly to safety of vehicle occupants.

The information is structured as follows:

- **The most important information in brief:** in this chapter, you are provided with an overview of the relationship between the restraint system and the correct behaviour of all vehicle occupants.
- **Specific information:** in further sections of the chapter "Occupant safety", you can find specific information on the equipment and functions of the restraint system.
- **Keyword directory:** you can also find certain subjects in this Owner's Manual using the keyword directory.

Information on the following subjects, among others, are not provided in the chapter "Occupant safety":

- Children in the vehicle (→ page 101)
- Driving and driving safety systems (→ page 265)
- Stowage areas (→ page 170)

Defining generic terms clearly

In this Owner's Manual, the following generic terms are used:

- **Occupant safety:** comprises the components and system functions which help to minimise, as much as possible, the stresses on and consequences for vehicle occupants during an accident.
- **Restraint system:** comprises those components which, along with the vehicle structure, help prevent vehicle occupants from potentially coming into contact with parts of the vehicle interior. The seat belts and airbags, for example, are components of the restraint system.
- **Child restraint system:** you can find all information on this subject in the chapter "Children in the vehicle" (→ page 101).

Be diligent

For the components of the restraint system to provide the intended level of protection, it is essential that your posture is correct and that the seat belt is correctly fastened.

Bear in mind that negligence when adjusting your sitting position and fastening the seat belt may have serious consequences. Be diligent and make sure that all vehicle occupants are sitting correctly and have fastened their seat belts properly before starting every journey (→ page 86).

Information on the correct seat position

The seat position must be correct in order for the components of the restraint system to provide the intended level of protection.

The seat position influences both the protection provided by the seat belt and the additional protection provided by the airbag.

A correct seat position in which the seat is nearly perfectly upright and a correctly fastened seat belt reduce the risks posed by the airbag when it is deployed.

Keep space considerations in mind when choosing a seat. With the seat in the correct, nearly upright position, your head should not touch the roof.

⚠ WARNING Risk of injury or death due to an incorrect seat position

If you deviate from the correct seat position, the airbag cannot provide its intended protective function.

Each vehicle occupant must make sure of the following.

- ▶ Put the seat in the correct position.
- ▶ Fasten seat belts correctly. Pregnant women must take particular care to ensure that the lap belt never lies across the abdomen.
- ▶ Observe the following information.

In order for the restraint system to provide the intended level of protection, observe the following information:

- Before starting your journey, adjust your seat correctly (→ page 151).

When doing so, make sure you are able to fasten your seat belt correctly. The shoulder belt strap must be routed forward from the seat belt outlet over the centre of your shoulder.

- Keep your distance from the airbags, especially the front airbags. Set the driver's seat and front passenger seat as far back as possible while making sure the seat belt is fastened correctly.
- If persons are sitting on the rear seats, vehicle occupants should maintain a sufficient distance to the parts of the vehicle interior in front of them.
- Make sure there are no people, animals or objects between the vehicle occupants and an airbag.
- If you are the driver, observe the following information on the correct position of the driver's seat (→ page 151).

Only hold the steering wheel by the steering wheel rim. This allows the driver's airbag to fully deploy.

- Assume a nearly upright sitting posture, with your buttocks positioned as far back as possible in the gap between the seat cushion and the seat backrest.

Your back must lie as flatly and as firmly as possible against the seat backrest.

- While driving, do not lean forward and do not lean against the door or side window. You may otherwise be in the deployment area of the airbags.
- Sit with their feet resting on the floor, if possible. Your thighs are slightly supported by the seat cushion

Do not put your feet on the cockpit, for example. Your feet may otherwise be in the deployment area of the airbag.

- Fasten the seat belt correctly (→ page 87).

Notes on wearing the seat belt correctly

Always fasten your seat belt correctly before starting a journey. A seat belt can only provide the best level of protection if it is worn correctly.

⚠ WARNING Risk of injury or death due to incorrectly fastened seat belt

If the seat belt is not worn correctly, it cannot perform its intended protective function.

In addition, an incorrectly fastened seat belt can also cause injuries, for example, in the event of an accident or when braking or changing direction suddenly.

- ▶ Always ensure that all vehicle occupants have their seat belts fastened correctly and are sitting properly.

⚠ WARNING Risk of injury or death when additional restraint systems are not used for persons with a smaller stature

Persons under 1.50 m tall cannot wear the seat belt correctly without a suitable additional restraint system.

- ▶ Always secure persons under 1.50 m tall in a suitable restraint system.

Observe the following information on the correct seat position and posture (→ page 86).

Each vehicle occupant must observe the following notes in particular:

- The seat belt must not be twisted.

- The shoulder belt strap must be routed forward from the seat belt outlet over the centre of your shoulder.
- The shoulder belt strap should neither touch your neck nor be routed under your arm or behind your back.
- The lap belt must be routed as low down across the hips as possible.

In addition, push the lap belt down as far as possible across your hips and pull tight with the shoulder belt strap. Never route the lap belt across your abdomen.

Pregnant women must also take particular care with this.

- After being tightened, the shoulder belt strap and lap belt must fit snugly against the body.
- Avoid wearing bulky clothing, e.g. a winter coat.
- Never route the seat belt across sharp, pointed, abrasive or fragile objects.
- Only one person should use each seat belt at any one time.

- Never secure objects with a seat belt if the seat belt is also being used by one of the vehicle's occupants.

Also ensure that no objects, e.g. a cushion, are ever placed between a person and the seat.

If you are driving with a child in the vehicle, observe the information in the chapter "Children in the vehicle" (→ page 101)

Observe the instructions for loading the vehicle when securing objects, luggage or loads (→ page 170).

Fastening seat belts

If the seat belt is pulled quickly or sharply, the seat belt retractor locks. The seat belt strap cannot be pulled out any further.

- ▶ Always engage seat belt tongue ② of the seat belt into seat belt buckle ① of the corresponding seat.

! **NOTE** Deployment of components of the restraint system when the front passenger seat is unoccupied and a seat belt is buckled

When the front passenger seat is unoccupied and the seat belt tongue of the seat belt is engaged in the seat belt buckle, components of the restraint system may deploy unnecessarily on the front passenger side, e.g. the seat belt tensioner.

- ▶ Only buckle the seat belts as intended.

Function of the restraint system warning lamp

When the vehicle is switched on, a self-test is performed, during which the  restraint system warning lamp lights up. It goes out no later than a few seconds after the vehicle is started. The components of the restraint system are then functional.

A malfunction has occurred in the restraint system if:

- the  restraint system warning lamp does not light up or is lit continuously when the vehicle is switched on
- the  restraint system warning lamp lights up continuously or repeatedly during a journey

If components of the restraint system have been deployed, the  restraint system warning lamp lights up continuously.

⚠ WARNING Risk of injury due to malfunctions in the restraint system

Components in the restraint system may be activated unintentionally or not deploy as intended in an accident.

- ▶ Have the restraint system checked and repaired immediately at a qualified specialist workshop.

If the restraint system is malfunctioning, the automatic high voltage emergency shutoff may not function.

⚠ DANGER Risk of fatal injury due to malfunctioning automatic high-voltage emergency shutoff

In the event of an accident, the high-voltage on-board electrical system may not be deactivated as intended.

You may receive an electric shock if you touch the damaged components of the high-voltage on-board electrical system.

- ▶ Have the automatic high-voltage emergency shutoff checked and repaired immediately at a qualified specialist workshop.
- ▶ After an accident, switch off the vehicle immediately.

Mercedes-Benz recommends that you have the vehicle towed to a qualified specialist workshop.

Function of the seat belt warning lamp

The  seat belt warning lamp in the Instrument Display is a reminder that all vehicle occupants must wear their seat belts correctly.

In addition, a warning tone may sound.

As soon as the driver and front passenger fasten their seat belts, the seat belt warning goes out.

Function of the rear seat belt status display

The rear seat belt status display is only available for certain countries.

When the vehicle is switched on, the rear seat belt status display informs you for a certain amount of time which rear seat belt is not fastened.

The status of the rear seat belt can be recognised by the colour of the symbol in the driver's display:

- Grey: the seat belt tongue of a rear seat belt is not engaged in the seat belt buckle of the corresponding seat.
- Green: the seat belt tongue of a rear seat belt is engaged in the seat belt buckle of the corresponding seat.

Every vehicle occupant must always fasten their seat belt correctly before starting a journey.

- Red: a vehicle occupant in the rear passenger compartment has released the seat belt buckle using the release button and may not be properly secured.

If a vehicle occupant unfastens a seat belt in the rear, the rear seat belt status display appears again.

In addition, a warning tone may sound.

Function of the PASSENGER AIR BAG indicator lamps (front passenger airbag)

Vehicles without automatic front passenger airbag shutoff have a special sticker affixed to the side of the cockpit on the front passenger side (→ page 108).

The PASSENGER AIR BAG indicator lamps display the status of the front passenger airbag.

If the front passenger seat is occupied or a child restraint system is fitted on the front passenger seat, you must make sure both before, and also during the journey, that the status of the front passenger airbag is correct for the situation.

⚠ WARNING Risk of potentially fatal injuries due to objects trapped under the front passenger seat

Objects trapped under the front passenger seat may interfere with the function of the automatic front passenger airbag shutoff or damage the system.

- ▶ Do not stow any objects under the front passenger seat.
- ▶ When the front passenger seat is occupied, ensure that no objects have become trapped beneath the front passenger seat.

Self-test: when the vehicle is switched on, both the PASSENGER AIR BAG ON and OFF indicator lamps light up simultaneously for several seconds.

After the self-test, you can determine the status of the front passenger airbag as follows:

- **Front passenger airbag disabled:** PASSENGER AIR BAG OFF lights up continuously.
The front passenger airbag will not be deployed in the event of an accident. If PASSENGER AIR BAG OFF is lit, no one may use the front passenger seat.
If a rearward-facing child restraint system is fitted on the front passenger seat, PASSENGER AIR BAG OFF must be lit continuously.
- **Front passenger airbag enabled:** PASSENGER AIR BAG ON lights up for up to 60 seconds or until both the PASSENGER AIR BAG ON and OFF indicator lamps go out.
The front passenger airbag may be deployed during an accident. If the front passenger airbag is in this status, no rearward-facing child restraint system may be fitted on the front passenger seat.

- ① If you are driving with a child in the vehicle, observe the information in the chapter "Children in the vehicle" (→ page 101)

⚠ WARNING Risk of injury or death due to a disabled front passenger airbag

The front passenger airbag is disabled when the PASSENGER AIR BAG OFF indicator lamp is lit.

A person in the front passenger seat could then, for example, come into contact with the vehicle interior, especially if the person is sitting too close to the cockpit.

If the front passenger seat is occupied, always ensure that:

- the classification of the person in the front passenger seat is correct and the front passenger airbag is enabled or disabled in accordance with the person in the front passenger seat.
- the front passenger seat has been moved as far back as possible.

- the person is seated correctly.
- ▶ Both before and during the journey, ensure that the status of the front passenger airbag is correct.

Malfunction of the automatic front passenger airbag shutoff

The PASSENGER AIR BAG OFF indicator lamp and the  restraint system indicator lamp light up simultaneously.

In this case, no one may use the front passenger seat and no child restraint system may be fitted on the front passenger seat.

Have the automatic front passenger airbag shutoff checked and repaired immediately at a qualified specialist workshop.

Disabling or enabling the front passenger airbag

The automatic front passenger airbag shutoff can disable or enable the front passenger airbag according to the situation.

This happens automatically as a result of the classification of the person or child restraint system on the front passenger seat.

You cannot manually disable or enable the front passenger airbag.

Information on the child restraint system

When fitting a child restraint system, observe the notes in "Children in the vehicle" (→ page 101).

Notes on the child restraint system on the front passenger seat

⚠ WARNING Risk of injury or death due to an enabled co-driver airbag

If the co-driver airbag is enabled, a child on the co-driver seat may be struck by the co-driver airbag during an accident.

▶ NEVER use a rearward-facing child restraint system on a seat with an ENABLED FRONT AIRBAG. DEATH or SERIOUS INJURY to the CHILD can occur.

Also pay particular attention to the notes on rearward-facing or forward-facing child restraint systems on the front passenger seat (→ page 105).

Information on the automatic functions of the restraint system

Function of the automatic front passenger airbag shutoff

A person on the front passenger seat must observe the following information:

- Sit correctly (→ page 86).
- Fasten the seat belt correctly (→ page 87).

The automatic front passenger airbag shutoff can disable or enable the front passenger airbag according to the situation.

Make sure you observe the following information:

- The status of the front passenger airbag, see "Function of the PASSENGER AIR BAG indicator lamps"(→ page 90).

- When fitting a child restraint system to the front passenger seat, observe the vehicle-specific information (→ page 105).

Status of the front passenger airbag in relation to the stature of the person:

- **Front passenger airbag disabled:** PASSENGER AIR BAG OFF lights up continuously.

The front passenger airbag will not be deployed in the event of an accident. If PASSENGER AIR BAG OFF is lit, no one may use the front passenger seat.

- **Front passenger airbag enabled:** PASSENGER AIR BAG ON lights up for up to 60 seconds or until both the PASSENGER AIR BAG ON and OFF indicator lamps go out.

The front passenger airbag may be deployed during an accident. Observe the following information on the correct seat position (→ page 86).

Vehicles with rear seats: a person of smaller stature should use a rear seat.

System limits

The front passenger airbag may otherwise be disabled by mistake, for example, in the following situation:

- The front passenger transfers their weight by supporting themselves on a vehicle armrest.
- The front passenger sits in such a way that their weight is raised from the seat surface.

! **NOTE** Deployment of components of the restraint system when the front passenger seat is unoccupied

In an accident, the components of the restraint system may deploy unnecessarily on the front passenger side if:

- There are heavy objects on the front passenger seat.
 - The seat belt tongue is engaged in the seat belt buckle of the front passenger seat and the front passenger seat is unoccupied.
- ▶ Stow objects in a suitable place.
- ▶ Only one person should use each seat belt at any one time.

Depending on the detected accident situation, the window airbag on the front passenger side may deploy. The airbag is deployed regardless of whether the front passenger seat is occupied.

Function of PRE-SAFE® (anticipatory occupant protection)

PRE-SAFE® is able to detect certain critical driving situations and implement pre-emptive measures to protect the vehicle occupants.

PRE-SAFE® can implement the following measures independently of each other:

- Tightening the seat belts on the driver's seat and front passenger seat.
- Closing the side windows.
- **Vehicles with sliding sunroof:** closing the sliding sunroof.
- **Vehicles with memory function:** moving the front passenger seat to a more favourable seat position.
- **PRE-SAFE® Sound:** provided that the multimedia system is switched on, generating a brief noise signal to stimulate the innate protective mechanism of a person's hearing.

! **NOTE** Damage caused by objects in the footwell or behind the seat

The automatic adjustment of the seat position may result in damage to the seat and/or the object.

▶ Stow objects in a suitable place.

Reversing the PRE-SAFE® system measures

If an accident did not occur, the pre-emptive measures that were taken are reversed.

You will need to perform certain settings yourself.

▶ If the seat belt pre-tensioning is not reduced, move the seat backrest slightly backwards. The seat belt pre-tensioning releases.

Seat belt adjustment function

Vehicles with PRE-SAFE®: after you have fastened the seat belt of the front seat, it may adjust itself against your body by pulling at the shoulder until somewhat tight. Do not hold the seat belt tightly while it is adjusting.

This function is a reminder that all vehicle occupants must wear their seat belts correctly.

You can activate and deactivate the seat belt adjustment function using the multimedia system (→ page 94).

Activating/deactivating seat belt adjustment via the multimedia system

Multimedia system:

↩️ 🏠 ▶▶ Settings ▶▶ Vehicle
▶▶ Occupant protection

▶ Activate or deactivate **Belt adjustment**.

Overview of the automatic measures after an accident

Depending on the type and severity of the accident, and depending on the vehicle's equipment, the following measures can be implemented, for example:

- automatic braking (post-collision brake) (→ page 94)

- activating the hazard warning lights
- triggering an automatic emergency call (→ page 49)
- switching off the drive system and high-voltage on-board electrical system
- unlocking the vehicle doors
- lowering the side windows
- displaying the emergency guide in the central display (→ page 49)
- switching on the interior lighting

Function of the post-collision brake after an accident

Depending on the accident situation, the post-collision brake can minimise the severity of a further collision or even avoid it.

If an accident is detected, the post-collision brake can initiate automatic braking. When the vehicle has come to a standstill, the electric parking brake is automatically applied.

The driver can cancel automatic braking by taking the following actions:

- braking more strongly than automatic braking
- fully depressing the accelerator pedal with force

Purpose and function of the restraint system

Overview of deployment situations (restraint system)

In particular ensure the following conditions to enable the components of the restraint system to deploy their protective potential:

- Seat correctly (→ page 86).
- Fasten seat belts correctly (→ page 87).
 - Function of the seat belt warning lamp (→ page 89).
 - Function of the rear seat belt status display (→ page 89).
- The restraint system warning lamp  does not light up after the self-check (→ page 88).

- The indicator lamps PASSENGER AIR BAG display the correct status of the front passenger airbag (→ page 90).

Depending on the detected deployment situation, the components of the restraint system can be activated or deployed independently of each other:

- Seat belt tensioner: frontal impact, rear impact, side impact, rollover
- Driver's airbag, front passenger airbag: frontal impact
- Knee airbag: frontal impact
- Side airbag: side impact
- Window airbag: side impact, rollover, frontal impact

The installation location of an airbag is identified by the symbol AIRBAG (→ page 100).

Observe the information on how the restraint system works (→ page 95).

Information on how the restraint system works

How the restraint system functions depends on the severity of the impact detected and the apparent type of accident.

For more information about types of accidents, see "Overview of deployment situations" (→ page 95).

The activation thresholds for the components of the restraint system are determined based on the evaluation of the sensor values measured at various points in the vehicle. This process is pre-emptive in nature. The triggering/deployment of the components of the restraint system must take place in good time at the start of the collision.

Factors which can only be seen and measured after a collision has occurred cannot play a decisive role in airbag deployment. Nor do they provide an indication of airbag deployment.

The vehicle may be deformed significantly without an airbag being deployed. This is the case if only parts which are relatively easily deformed are affected and the rate of vehicle deceleration is not high. Conversely, an airbag may be deployed even though the vehicle suffers only minor defor-

mation. If very rigid vehicle parts such as longitudinal members are hit, this may result in sufficiently high levels of vehicle deceleration.

Depending on the apparent type of accident and the detected deployment situation, seat belt tensioners and/or airbags supplement the protection offered by a correctly worn seat belt.

When enabled, an airbag can provide additional protection for the respective vehicle occupant.

Potential protection provided by each airbag:

- Knee airbag: thigh, knee and lower leg
- Driver's airbag, front passenger airbag: head and ribcage
- Window airbag: head
- Side airbag: ribcage and pelvis

However, no system available today can completely eliminate injuries and fatalities in every accident situation. In particular, the seat belt and airbag generally do not protect against objects penetrating the vehicle from the outside. It is also not possible to completely rule out the risk of injury caused by the airbag deploying.

Mercedes-Benz recommends that you have the vehicle towed to a qualified specialist workshop after an accident. Take this into account, particularly if a seat belt tensioner is triggered or an airbag deployed.

If the seat belt tensioners are triggered or an airbag is deployed, you will hear a bang, and a small amount of powder may also be released:

- The bang will not generally affect your hearing.
- In general, the powder released is not hazardous to health but may cause short-term breathing difficulties to persons suffering from asthma or other pulmonary conditions.

Provided it is safe to do so, leave the vehicle immediately or open the window in order to prevent breathing difficulties.

Information on the limited protection provided by the restraint system

Risk due to the incorrect behaviour of vehicle occupants

Every vehicle occupant must make sure of the following in particular:

- They observe the information on the correct seat position (→ page 86).
- There are no heavy, sharp-edged or fragile objects in the pockets of their clothing. Store such objects in a suitable place.

⚠ WARNING Risk of injury or death due to incorrect seat position

The seat belt will not offer the intended level of protection if you have not moved the seat backrest to an almost vertical position.

In particular, you may slip under the seatbelt and injure yourself.

▶ Adjust the seat properly before beginning your journey.

- ▶ Always ensure that the seat backrest is in an almost vertical position and that the shoulder section of your seat belt is routed across the centre of your shoulder.

Risk due to objects in the vehicle interior

Every vehicle occupant must make sure of the following in particular:

- They observe the information on the correct seat position (→ page 86).
- There are no objects between the seat, door and door pillar (B-pillar).
- There are no hard objects, e.g. coat hangers, hanging on the grab handles or coat hooks.
- There are no heavy, sharp-edged or fragile objects in the pockets of their clothing. Store such objects in a suitable place.

⚠ WARNING Risk of injury or death due to blocked seat belt buckle or seat belt anchorage

Objects next to the front seat that block the seat belt buckle or the moving seat belt anchorage on the front seat impair the function of the seat belt tensioners.

- ▶ Before starting the journey, make sure that there are no objects around the seat belt buckle or between the front seat and door.

⚠ WARNING Risk of injury from objects in the deployment area of an airbag

Objects in the deployment area of an airbag can hinder or prevent the correct deployment of the airbag.

The airbag may then deploy in an uncontrolled manner and may even cause additional injuries to the vehicle occupants by deploying. This may be the case in particular if the airbag is integrated into the seat.

- ▶ Always stow and secure objects correctly.
- ▶ Before commencing your journey, make sure that no objects are stowed in the deployment area of an airbag.

The installation location of an airbag is identified by the AIRBAG (→ page 100) symbol.

Risk due to fitting accessories

Do not attach accessories such as mobile navigation devices, mobile phones or cup holders, within the deployment area of an airbag, e.g. on the cockpit, on the door, on the side window or on the side trim.

In addition, no connecting cables, tensioning straps or retaining straps must be routed or attached to the vehicle within the deployment area of an airbag. Always comply with the accessory manufacturer's installation instructions and, in particular, the notes on suitable places for installation.

⚠ WARNING Risk of injury or death due to unsuitable protective covers

Due to unsuitable protective covers, the airbags cannot protect vehicle occupants as they are designed to do.

- ▶ You should only use protective covers that have been approved for the corresponding seat by Mercedes-Benz.

In addition, the function of the automatic front passenger airbag shutoff could be restricted due to an unsuitable protective cover. If the front passenger seat is occupied, ensure that the PASSENGER AIR BAG indicator lamps display the correct status of the front passenger airbag (→ page 90).

Risk due to pets in the vehicle interior

⚠ WARNING Risk of accident and injury due to animals left unsecured or unattended in the vehicle

If you leave animals in the vehicle unattended or unsecured, they could press buttons or switches, for instance.

An animal may:

- activate vehicle equipment and become trapped, for example
- switch systems on or off and endanger other road users

Unsecured animals may be thrown about the vehicle in the event of an accident, or sudden steering and braking manoeuvres, and injure vehicle occupants.

- ▶ Never leave animals unattended in the vehicle.
- ▶ Always correctly secure animals while driving, e.g. using a suitable animal carrier.

Risk due to modification, damage or wear to the components of the restraint system

⚠ WARNING Risk of injury or death due to modifications to the restraint system

Vehicle occupants may no longer be protected as intended if alterations are made to the restraint system.

- ▶ Never alter the parts of the restraint system.
- ▶ Never tamper with the wiring or any electronic component parts or their software.

If it is necessary to modify the vehicle to accommodate a person with disabilities, contact a qualified specialist workshop.

Mercedes-Benz recommends that you use driving aids which have been approved for your vehicle by Mercedes-Benz.

⚠ WARNING Risk of injury or death due to damaged or modified seat belts

Seat belts cannot provide protection in the following situations:

- the seat belt is damaged, has been modified, is extremely dirty, bleached or dyed
- the seat belt buckle is damaged or extremely dirty
- modifications have been made to the seat belt tensioner, seat belt anchorage or seat belt retractor

Seat belts may sustain non-visible damage in an accident, e.g. due to glass splinters.

Modified or damaged seat belts could tear or fail in the event of an accident, for example.

Modified seat belt tensioners could accidentally trigger or fail to function as intended.

- ▶ Never modify the seat belt system, for example the seat belt, seat belt buckle, seat belt tensioner, seat belt anchorage and seat belt retractor.

- ▶ Make sure that the seat belts are undamaged, not worn and clean.
- ▶ Always have the seat belts checked immediately after an accident at a qualified specialist workshop.

Mercedes-Benz recommends that you use seat belts which have been approved for your vehicle by Mercedes-Benz.

⚠ WARNING Risk of injury due to modifications to the cover of an airbag

If you modify the cover of an airbag or affix objects such as stickers to it, the airbag can no longer function as intended.

- ▶ Never modify the cover of an airbag.
- ▶ Do not attach any objects to the cover.

The installation location of an airbag is identified by the AIRBAG symbol (→ page 100).

⚠ WARNING Risk of injury due to malfunctioning sensors in the door

The function of the airbags can be impaired due to modifications or incorrect work performed on the doors or door trim, or if the doors are damaged.

- ▶ Never modify the doors or parts of the doors.
- ▶ Always have work on the doors or door trim carried out at a qualified specialist workshop.

Risk due to components of the restraint system which have already been deployed

Mercedes-Benz recommends that you have the vehicle towed to a qualified specialist workshop after an accident.

⚠ WARNING Risk of burns from hot airbag components

The airbag parts are hot after an airbag has been deployed.

- ▶ Do not touch the airbag parts.

- ▶ Have a deployed airbag replaced at a qualified specialist workshop as soon as possible.

⚠ WARNING Risk of injury due to deployed airbag

A deployed airbag no longer offers any protection.

- ▶ Have the vehicle towed to a qualified specialist workshop in order to have the deployed airbag replaced.

Have deployed airbags replaced immediately.

⚠ WARNING Risk of injury or death from deployed pyrotechnic seat belt tensioners

Pyrotechnic seat belt tensioners that have been deployed are no longer operational and are unable to perform their intended protective function.

- ▶ Therefore, have deployed pyrotechnic seat belt tensioners immediately

replaced at a qualified specialist workshop.

Seat belts

Releasing the seat belts

- ▶ Press the release button in the seat belt buckle and guide the seat belt back with the seat belt tongue.

! NOTE Damage caused by trapping the seat belt

If an unused seat belt is not fully retracted, it may become trapped in the door or in the seat mechanism.

- ▶ Always ensure that an unused seat belt is fully retracted.

Airbags

Overview of airbags

- ① Knee airbag
- ② Driver's airbag
- ③ Front passenger airbag
- ④ Window airbag
- ⑤ Side airbag

The installation location of an airbag is identified by the AIRBAG symbol.

Observe the information in "Overview of deployment situations" (→ page 95).

Brief overview of most important points

Safely transporting children in the vehicle

Always observe the following when transporting children:

- Never leave children unattended in the vehicle (→ page 103).

- Secure children up to a height of 1.50 m on the seat (see illustration above) properly with a suitable and approved child restraint system (→ page 108), and secure small children in a rearward-facing child restraint system.
- Observe the child restraint system manufacturer's installation instructions.

Left/right rear seat (preferred seats)

Preferred securing system:

-  LATCH-type (ISOFIX) securing rings (→ page 112)
- or
-  i-Size securing rings (→ page 114)

and

-  Also secure Top Tether if present (→ page 120).

Alternative securing system:

-  Vehicle seat belt (→ page 121)
-  Additionally attach Top Tether if recommended by the manufacturer of the child restraint system (→ page 120).

The following child restraint systems within the Universal category are approved: U, UF, i-U, IU, IUF. Observe the other alternatives for use (→ page 112).

Front passenger seat

Securing system:

-  Vehicle seat belt (→ page 121)

Be sure to observe:

- If the front passenger seat is occupied, ensure that the status of the front passenger airbag is correct for the current situation (→ page 90).

The following child restraint systems within the Universal category are approved: U^(*), UF. Observe the other alternatives for use (→ page 115).

(*) rearward-facing child restraint systems only in combination with automatic airbag shutoff

Centre rear seat

Securing system:

-  Vehicle seat belt (→ page 121)

The following belt-secured child restraint systems within the Universal category are approved: U, UF. Observe the other alternatives for use (→ page 121).

Important safety notes

Basic information

Be diligent

Bear in mind that negligence when securing a child in the child restraint system may have serious consequences. Always be diligent in securing a child carefully before every journey.

Never allow babies and children to travel sitting on the lap of another vehicle occupant.

To improve protection for children younger than twelve years old or under 1.50 m in height, Mercedes-Benz recommends you observe the following information:

- Always secure the child in a child restraint system suitable for this Mercedes-Benz vehicle.
- The child restraint system must be appropriate to the age, weight and size of the child.

- The vehicle seat must be suitable for the child restraint system to be fitted:
 - LATCH-type (ISOFIX) securing rings: (→ page 112)
 - i-Size securing rings: (→ page 114)
 - Securing with the vehicle seat belt: (→ page 115)

Accident statistics show that children secured on the rear seats are generally safer than children secured on the front seats. For this reason, Mercedes-Benz strongly advises that you fit a child restraint system to a rear seat.

The generic term child restraint system

The generic term child restraint system is used in this Owner's Manual. A child restraint system is, for example:

- a baby car seat
- a rearward-facing child seat
- a forward-facing child seat
- a child booster seat – Mercedes-Benz recommends using a child booster seat **with** a backrest and seat belt guide.

Observe laws and legal requirements

Always observe the legal requirements when using a child restraint system in the vehicle.

Make sure that the child restraint system is approved in accordance with the valid test specifications and guidelines. Further information can be obtained at a qualified specialist workshop. Mercedes-Benz recommends that you use a Mercedes-Benz Service Centre for this purpose.

Securing systems for child restraint systems in the vehicle

Only use the following securing systems for child restraint systems:

- the LATCH-type (ISOFIX) or i-Size securing rings
- the vehicle's seat belt system
- the Top Tether anchorages

Simply attaching to the LATCH-type (ISOFIX) securing rings or i-Size securing rings on the vehicle can reduce the risk of fitting the child restraint system incorrectly.

When securing a child with the integrated seat belt of the ISOFIX/LATCH or i-Size child restraint system, always comply with the permissible gross weight for the child and child restraint system (→ page 119).

Important warning notices

Always secure a child restraint system correctly

⚠ WARNING Risk of injury or death due to incorrect installation of the child restraint system

The child can then not be protected or restrained as intended.

- ▶ Be sure to comply with the manufacturer's installation instructions for the child restraint system and its correct use.
- ▶ Make sure that the entire base of the child restraint system always rests on the sitting surface of the seat.

- ▶ Never place objects (e.g. cushions) under or behind the child restraint system.
- ▶ Use child restraint systems only with the original cover designed for them.
- ▶ Always replace damaged covers with genuine covers.

- Always observe the vehicle-specific information.
 - Fitting an ISOFIX or i-Size child restraint system on the rear seat (→ page 119).
 - Securing the child restraint system with the seat belt (→ page 121).
- Observe the warning labels in the vehicle interior and on the child restraint system.

⚠ WARNING Risk of injury or death due to unsecured child restraint systems in the vehicle

If the child restraint system is incorrectly fitted or not secured, it can become detached.

The child cannot then be protected or restrained as intended.

The unused child restraint system can become detached and strike vehicle occupants.

- ▶ Always comply with the manufacturer's installation instructions for the child restraint system and its correct use.
- ▶ Always fit child restraint systems correctly, even if they are transported unused in the vehicle.

Do not modify the child restraint system

⚠ WARNING Risk of injury due to modifications to the child restraint system

The child restraint system can no longer function properly. This poses an increased risk of injury.

- ▶ Never modify a child restraint system.
- ▶ Only affix accessories which have been specially approved for this child restraint

system by the child restraint system's manufacturer.

Only use child restraint systems which are in proper working condition

⚠ WARNING Risk of injury or death caused by the use of damaged child restraint systems

Child restraint systems or their retaining systems that have been subjected to stress in an accident may not be able to perform their intended protective function.

It may be the case that the child cannot be properly restrained.

- ▶ Always immediately replace child restraint systems that have been damaged or involved in an accident.
- ▶ Have the securing systems for the child restraint systems checked at a qualified specialist workshop before installing a child restraint system again.

Avoid direct sunlight

⚠ WARNING Risk of burns when the child seat is exposed to direct sunlight

If the child restraint system is exposed to direct sunlight or heat, parts could heat up. Children could suffer burns from these parts, particularly on metallic parts of the child restraint system.

- ▶ Always make sure that the child restraint system is not exposed to direct sunlight.
- ▶ Protect the child restraint system with a blanket, for example.
- ▶ If the child restraint system has been exposed to direct sunlight, allow it to cool before securing a child into it.
- ▶ Never leave children unattended in the vehicle.

Observe when stopping or parking

⚠ WARNING Risk of fatal injury due to exposure to extreme heat or cold in the vehicle

If persons, particularly children, are subjected to prolonged exposure to intense heat or cold, there is a risk of severe injury or even death.

- ▶ Never leave persons, particularly children, unattended in the vehicle.

⚠ WARNING Risk of accident- and injury due to children left unattended in the vehicle

When children are left unattended in the vehicle, they can be expected in particular to

- open doors, thereby endangering other persons or road users.
- get out and be struck by oncoming traffic.
- operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:

- releasing the parking brake.
- changing the drive range.
- starting the vehicle.

- ▶ Never leave children unattended in the vehicle.
- ▶ When leaving the vehicle, always take the key with you and lock the vehicle.
- ▶ Keep the key out of reach of children.

Overview of warning stickers in the vehicle

- 1 Front passenger airbag warning (on the front passenger sun visor) (→ page 105)
- 2 Vehicles without automatic front passenger airbag shutoff warning (visible when the front passenger door is open) (→ page 108)

Notes on rearward-facing and forward-facing child restraint systems on the front passenger seat

⚠ WARNING Risk of injury or death when using a rearward-facing child restraint system while the front passenger airbag is enabled

If you secure a child in a rearward-facing child restraint system on the front passenger seat and the PASSENGER AIR BAG OFF indicator lamp is off, the front passenger airbag can deploy in the event of an accident.

The child could be struck by the airbag.

- ▶ Always ensure that the front passenger airbag is disabled. The PASSENGER AIR BAG OFF indicator lamp must be lit.
- ▶ NEVER use a rearward-facing child restraint system on a seat with an ENABLED FRONT AIRBAG. This can result in the DEATH of or SERIOUS INJURY to the CHILD.

Observe the specific instructions for the rearward-facing and forward-facing child restraint systems (→ page 117).

Warning notice on the front passenger sun visor

If it is absolutely necessary to install a child restraint system on the front passenger seat, always observe the additional notes.

- the notes on automatic front passenger airbag shutoff (→ page 91).
- When using a rearward-facing child restraint system on the front passenger seat, the front passenger airbag must always be disabled. This is only the case if the PASSENGER AIR

BAG OFF indicator lamp is lit continuously (→ page 90).

- The front passenger airbag is enabled when the PASSENGER AIR BAG OFF indicator lamp is not lit. The front passenger airbag may be deployed during an accident. In that case, do not use rearward-facing child restraint systems.

Information on the automatic front passenger airbag shutoff

If the front passenger seat is occupied, ensure, both before and during the journey, that the status of the front passenger airbag is correct for the current situation.

⚠ WARNING Risk of injury or death due to objects between the seat surface and the child restraint system

Objects between the seat surface and the child restraint system could affect the function of the automatic co-driver airbag shutoff.

- ▶ Do not place any objects between the seat surface and the child restraint system.
- ▶ Make sure that the entire base of the child restraint system is always resting on the seat surface of the co-driver seat.
- ▶ The backrest of the forward-facing child restraint system must, as far as possible, be resting on the seat backrest of the co-driver seat.
- ▶ It is essential to comply with the child restraint system manufacturer's installation instructions.

When fitting a child restraint system to the front passenger seat, observe the vehicle-specific information (→ page 105).

Rearward-facing child restraint system on the front passenger seat

If a rearward-facing child restraint system is fitted on the front passenger seat, the front passenger airbag must be disabled. The PASSENGER AIR BAG OFF indicator lamp must light up continuously (→ page 90).

⚠ WARNING Risk of injury or death when using a rearward-facing child restraint system while the front passenger airbag is enabled

If you secure a child in a rearward-facing child restraint system on the front passenger seat and the PASSENGER AIR BAG OFF indicator lamp is off, the front passenger airbag can deploy in the event of an accident.

The child could be struck by the airbag.

- ▶ Always ensure that the front passenger airbag is disabled. The PASSENGER AIR BAG OFF indicator lamp must be lit.
- ▶ NEVER use a rearward-facing child restraint system on a seat with an ENABLED FRONT AIRBAG. This can result in the DEATH of or SERIOUS INJURY to the CHILD.

i The front passenger airbag is enabled depending on the child restraint system and the stature of the child. The PASSENGER AIR BAG OFF indicator lamp does not light up.

The front passenger airbag may be deployed during an accident. If the front passenger airbag is in this status, no rearward-facing child restraint system may be fitted on the front passenger seat.

Instead, fit the rearward-facing child restraint system to a suitable rear seat.

Forward-facing child restraint system on the front passenger seat

If a forward-facing child restraint system is fitted on the front passenger seat, the front passenger airbag may be automatically enabled or disabled. The status of the front passenger airbag depends on the child restraint system and the stature of the child.

The PASSENGER AIR BAG OFF indicator lamp is either lit continuously, or it is not lit (→ page 90). Always observe the following information.

⚠ WARNING Risk of injury or death caused by incorrect positioning of the child restraint system

If you secure a child in a forward-facing child restraint system on the front passenger seat and you position the front passenger seat too close to the cockpit, in the event of an accident, the child could:

- Come into contact with the vehicle interior if the PASSENGER AIR BAG OFF indicator lamp is lit, for example.
 - Be struck by the airbag if the PASSENGER AIR BAG OFF indicator lamp is off.
- ▶ Always move the front passenger seat as far back as possible. In doing so, always make sure that the shoulder belt strap is correctly routed from the seat belt outlet of the vehicle to the shoulder belt guide on the child restraint system. The shoulder belt strap must be routed forwards and downwards from the seat belt outlet.

If necessary, adjust the passenger seat accordingly.

- ▶ Always comply with the child restraint system manufacturer's installation instructions.

Notes on vehicles without automatic front passenger airbag shutoff

Vehicles without automatic front passenger airbag shutoff have a special sticker affixed to the side of the cockpit on the front passenger side (→ page 105).

Make sure you observe the following information:

- Never fit a rearward-facing child restraint system to the front passenger seat
- Always fit a rearward-facing child restraint system to a suitable rear seat
- Notes on rearward-facing and forward-facing child restraint systems on the front passenger seat (→ page 105)

Suitable child restraint systems for the transport of children

Information on the advantage of a rearward-facing child restraint system

Transport a baby in a suitable rearward-facing child restraint system only. It is also preferable to transport a small child in a suitable rearward-facing child restraint system. In this case, the child sits in the opposite direction to the direction of travel and faces backwards.

Babies and small children have comparatively weak neck muscles in relation to the size and weight of their head. The risk of injury to the cervical spine during an accident can be reduced in a rearward-facing child restraint system.

Approval categories for child restraint systems

Only child restraint systems that meet the following UNECE standards are permitted for use in the vehicle:

- UN-R44
- UN-R129

Identification on the child restraint system

The following information, e.g., is available on the approval label on the child restraint system:

- Approval category
- Child weight group
- Authorisation number
- Child restraint size class

Approval categories in accordance with UN-R44

Example of an approval label

- **Universal:** child restraint systems in the "Universal" category are approved for installation in vehicles. They can be used, in accordance with overviews of the suitability of seats for securing child restraint systems, on seats labelled U, UF or IUF.

The identification IUF refers to ISOFIX child restraint systems in the "Universal" category.

These child restraint systems must also be secured using Top Tether or support points.

- **Semi-Universal:** child restraint systems in the "Semi-Universal" category may only be used if the vehicle and vehicle seat are listed in the child restraint system manufacturer's vehicle model list.
- **Vehicle-specific:** child restraint systems in the "vehicle-specific" category may only be used if the vehicle and vehicle seat are listed in the child restraint system manufacturer's vehicle model list.

Approval categories in accordance with UN-R129

Example of an approval label

- **i-Size** child restraint systems and booster seats with backrest: suitable for attachment to i-Size mounting brackets. They can be used on the seats marked i-U.

Child restraint systems in this category can also be attached to ISOFIX bars if approved by the manufacturer of the child restraint system. i-Size booster seats with backrest can be used

on seats marked U if the seat is approved for category B2/B3.

- Belted child restraint systems and belted booster seats without backrest of the **Universal** category: suitable for attachment to the seats marked U.
- **Vehicle-specific** child restraint systems (ISO-FIX or belted attachment as well as child booster seats with and without backrest): suitable for attachment to the seats marked i-U or U if this is approved by the child restraint system manufacturer.

Observe the suitability of vehicle seats

- Suitability of the seats for attaching ISOFIX child restraint systems (→ page 112)
- Suitability of seats for securing i-Size child restraint systems (→ page 114).
- Suitability of seats for attaching belt-secured child restraint systems (→ page 115)

Overview of recommended child restraint systems

- ① Further information on the correct child restraint system can be obtained at a quali-

fied specialist workshop. Mercedes-Benz recommends that you use a Mercedes-Benz Service Centre for this purpose.

Attachment with ISOFIX

Weight category 0+ (up to 13 kg and up to approx. 15 months)

Type ¹	BABY SAFE plus (including base station)
Size category	E
Approval	E1 04 301 146
Order number ²	B6 6 86 8224
1 Manufacturer: Britax Römer	2 with colour code 9H95

Weight category I (9 to 18 kg and from approx. 9 months to 4 years)

Type ¹	DUO plus
Size category	B1
Approval	E1 04 301 133

Suitable seats for attaching child restraint systems

Overview of suitability of the seats for attaching ISOFIX child restraint systems

ISOFIX is a standardised securing system for specially designed child restraint systems.

The symbol indicates seats suitable for attaching an ISOFIX child restraint system in accordance with UN R44 (→ page 108).

 ISOFIX child restraint systems can also be installed on seats with i-Size markings (→ page 114).

Attach only ISOFIX child restraint systems that are approved in accordance with UN R44 as per the following ISOFIX tables.

Carry cot

Size class – Equipment	Left/right rear seat
F – ISO/L1	X
G – ISO/L2	X
X Not suitable for an ISOFIX child restraint system in this weight category and/or size class.	

Weight category 0 (up to 10 kg and up to approx. 6 months)

Size class – Equipment	Left/right rear seat
E – ISO/R1	IL
IL Suitable for ISOFIX child restraint systems according to the table in "Overview of the recommended child restraint systems", or if the vehicle and the seat are listed on the child restraint system manufacturer's vehicle model list.	

Weight category 0+ (up to 13 kg and up to approx. 15 months)

Size class – Equipment	Left/right rear seat
E – ISO/R1	IL
D – ISO/R2, ISO/R2X	IL

Size class – Equipment	Left/right rear seat
C – ISO/R3	IL (1)
IL Suitable for ISOFIX child restraint systems according to the table in "Overview of the recommended child restraint systems", or if the vehicle and the seat are listed on the child restraint system manufacturer's vehicle model list. (1) When using a child restraint system of size class (ISO/R3), move the front seat into the highest position. Make sure that the seat backrest of the front seat does not rest against the child restraint system.	

Weight category 1 (9–18 kg and approx. 9 months to 4 years)

Size class – Equipment	Left/right rear seat
D – ISO/R2, ISO/R2X	IL
C – ISO/R3	IL (1)
B – ISO/F2	IUF
B1 – ISO/F2X	IUF

Size class – Equipment	Left/right rear seat
A – ISO/F3	IUF
IL Suitable for ISOFIX child restraint systems according to the table in "Overview of the recommended child restraint systems", or if the vehicle and the seat are listed on the child restraint system manufacturer's vehicle model list.	
IUF Suitable for forward-facing ISOFIX child restraint systems of the "Universal" category in this weight category.	
(1) When using a child restraint system of size class (ISO/R3), move the front seat into the highest position. Make sure that the seat backrest of the front seat does not rest against the child restraint system.	

Overview of suitability of the seats for attaching i-Size child restraint systems

i-Size is a standardised securing system for specially designed child restraint systems.

i-Size child restraint systems can be attached to a seat with the i-Size marking (→ page 108).

Child restraint systems that are approved in accordance with the following i-Size table may be attached.

Left and right rear seat

i-Size child restraint systems (ISO/R1, ISO/R2, ISO/R2X, ISO/R3, ISO/F2, ISO/F2X, ISO/F3, ISO/B2, ISO/B3)	i-U
i-U Suitable for forward-facing and rearward-facing i-Size child restraint systems in the "Universal" category.	

Front passenger seat

i-Size child restraint systems (ISO/R1, ISO/R2, ISO/R2X, ISO/R3, ISO/F2, ISO/F2X, ISO/F3, ISO/B2, ISO/B3)	X
X Not suitable for an i-Size child restraint system in the "Universal" category.	

Overview of the suitability of seats for attaching belt-secured child restraint systems

Suitability of seats for attaching belt-secured child restraint systems

Rear seats

Weight category 0: to 10 kg	
Left/right rear seat	U, L
Centre rear seat ¹	U, L
Weight category 0+: to 13 kg	

Left/right rear seat	U, L
Centre rear seat ¹	U, L
Weight category I: 9 to 18 kg	
Left/right rear seat	U, L
Centre rear seat ¹	U, L
Weight category II: 15 to 25 kg	
Left/right rear seat	U, L
Centre rear seat ¹	U, L
Weight category III: 22 to 36 kg	
Left/right rear seat	U, L
Centre rear seat ¹	U, L
1 Child restraint systems with a supporting bracket are not suitable for this seat.	

U Suitable for child restraint systems of the "Universal" category in this weight category.	
L Suitable for semi-universal child restraint systems according to the table in "Recommended child restraint systems", or if the vehicle and the seat are listed in the child restraint system manufacturer's vehicle model list.	

Notes on child restraint systems on the front passenger seat

- If it is absolutely necessary for you to fit a child restraint system to the front passenger seat, be sure to observe the information on child restraint systems on the front passenger seat (→ page 105).
- Observe the specific instructions for the rearward-facing and forward-facing child restraint systems. If the front passenger seat is occupied, ensure, both before and during the jour-

ney, that the status of the front passenger air-bag is correct for the current situation (→ page 90).

Front passenger seat

Weight category 0: to 10 kg	
Front passenger air-bag enabled ¹	X
Front passenger air-bag disabled ^{1, 2}	U, L
Weight category 0+: to 13 kg	
Front passenger air-bag enabled ¹	X
Front passenger air-bag disabled ^{1, 2}	U, L
Weight category I: 9 to 18 kg	

Front passenger air-bag enabled ¹	UF, L
Front passenger air-bag disabled ^{1, 2}	U, L
Weight category II: 15 to 25 kg	
Front passenger air-bag enabled ¹	UF, L
Front passenger air-bag disabled ^{1, 2}	U, L
Weight category III: 22 to 36 kg	
Front passenger air-bag enabled ¹	UF, L
Front passenger air-bag disabled ^{1, 2}	U, L

1 Adjust the seat cushion inclination so that the front edge of the seat cushion is in the highest position and the rear edge of the seat cushion is in the lowest position.	
2 The vehicle is equipped with automatic front passenger air-bag shutoff. The PASSENGER AIR BAG OFF indicator lamp must be lit.	
X Not suitable for children in this weight category.	
U Suitable for child restraint systems of the "Universal" category in this weight category.	

L Suitable for semi-universal child restraint systems according to the table in "Recommended child restraint systems", or if the vehicle and the seat are listed in the child restraint system manufacturer's vehicle model list.	
UF Suitable for forward-facing child restraint systems of the "Universal" category in this weight category.	

Securing the child restraint system

Adjusting the seat correctly

When fitting a child restraint system on the left or right rear seat, always observe the following:

- ▶ Make sure that the child's feet do not touch the front seat. If necessary, move the front seat slightly forwards.

If the head restraint of the child restraint system cannot be fully extended when it is installed in the vehicle, this will result in restrictions on the maximum size setting for certain child restraint systems. Observe the child restraint system manufacturer's installation instructions.

- ⓘ Contact with the roof when the head restraint is fully extended and locked in place will not result in any restrictions on use.

  Also observe the following when fitting an ISO FIX or i-Size child restraint system:

- ▶ **When using a rearward-facing child restraint system on a rear seat:** adjust the front seat so that it does not touch the child restraint system.
- ▶ **When using a forward-facing child restraint system with integrated child seat belt:** adjust the head restraint of the respective seat so that it does not push the child restraint system forwards. If necessary, the respective head restraint can be removed. In addition, the backrest of the child restraint system must lie as flat as possible against the backrest of the vehicle seat. After the child restraint system

has been removed, replace the vehicle head restraint immediately and adjust it correctly.

- ▶ The child restraint system must not be put under strain between the roof and the seat cushion and/or be fitted facing the wrong direction. Where possible, adjust the seat cushion angle accordingly.
- ▶ Adjust the vehicle head restraints so that the child restraint system is not put under strain by the head restraint.

 **When fitting a belt-secured child restraint system, also observe the following:**

- ▶ **When using a rearward-facing child restraint system on a rear seat:** adjust the front seat so that it does not touch the child restraint system.
- ▶ **When using a forward-facing child restraint system with integrated child seat belt:** adjust the head restraint of the respective seat so that it does not push the child restraint system forwards. If necessary, the respective head restraint can be removed. In addition, the backrest of the child restraint system must lie as flat as possible against the backrest of the

vehicle seat. After the child restraint system has been removed, replace the vehicle head restraint immediately and adjust it correctly.

- ▶ The backrest of the forward-facing child restraint system must, as far as possible, be resting on the seat backrest of the rear seat.
- ▶ The child restraint system must not be put under strain between the roof and the seat cushion and/or be fitted facing the wrong direction. Where possible, adjust the seat cushion angle accordingly.
- ▶ Adjust the vehicle head restraints so that the child restraint system is not put under strain by the head restraint.
- ▶ Make sure that the child's feet do not touch the front seat. If necessary, move the front seat slightly forwards.

 **Depending on the vehicle equipment, always observe the following when fitting a belt-secured child restraint system on the front passenger seat:**

- ▶ Observe the notes on rearward-facing and forward-facing child restraint systems on the front passenger seat (→ page 105).
- ▶ **When using a forward-facing child restraint system integrated child seat belt:** remove the head restraint from the front passenger seat, if possible. After the child restraint system has been removed, immediately replace the head restraint and adjust it correctly.
- ▶ The backrest of the forward-facing child restraint system must, as far as possible, be resting on the seat backrest of the front passenger seat.
- ▶ The child restraint system must not be put under strain between the roof and the seat cushion and/or be fitted facing the wrong direction.

- ▶ Adjust the vehicle head restraints so that the child restraint system is not put under strain by the head restraint.
- ▶ Never place objects (e.g. cushions) under or behind the child restraint system.
- ▶ Set the front passenger seat as far back as possible and move the seat into the highest position if possible. Always make sure that the shoulder belt strap is correctly routed from the seat belt outlet of the vehicle to the shoulder belt guide on the child restraint system. The shoulder belt strap must be routed forwards from the seat belt outlet and, where possible, downwards to the child restraint system.
- ▶ Fully retract the seat cushion length adjustment.
- ▶ Adjust the seat cushion inclination so that the front edge of the seat cushion is in the highest position and the rear edge of the seat cushion is in the lowest position.
- ▶ Set the seat backrest to the most vertical position possible.

Fitting an ISOFIX or i-Size child restraint system

⚠ WARNING Risk of accident if the rear bench seat, rear seat and seat backrest are not engaged

The rear bench seat, rear seat and seat backrest may fold forwards, even while the vehicle is in motion.

- As a result, the vehicle occupant will be pressed into the seat belt with increased force. The seat belt will not be able to protect as intended and could cause additional injury.
- Objects or loads in the boot or load compartment cannot be restrained by the seat backrest.

▶ Make sure that the rear bench seat, the rear seat and the seat backrest are engaged before every trip.

If the rear seat backrest is not engaged and locked in place, the red lock verification indicator will be visible.

⚠ WARNING Risk of injury or death if the permissible gross mass of the child and child restraint system together is exceeded.

Too much load may be placed on the ISOFIX or i-Size child restraint systems and the child may not be restrained correctly in the event of an accident, for example.

▶ If the child is secured in an ISOFIX or i-Size child restraint system with integrated seat belts, the total mass of the child and child restraint system must not exceed 33 kg.

Always observe the information on the mass of the child restraint system:

- in the installation and operating instructions of the manufacturer of the child restraint system
- on a label on the child restraint system, if present

Regularly check that the permitted total mass of the child and child restraint system is still being adhered to.

When fitting a child restraint system, also always observe the following:

✓ Always observe the area of use and the suitability of the seats for mounting a child restraint system.

 ISOFIX mounting brackets
(→ page 112).

or

 i-Size mounting brackets (→ page 114)

① ISOFIX mounting bracket

② i-Size mounting brackets

▶ Always be sure to check before every journey that the ISOFIX child restraint system or the i-Size child restraint system is correctly locked in place in both on-board mounting brackets.

! **NOTE** Damage to the seat belt for the centre seat during installation of the child restraint system

▶ Make sure that the seat belt is not trapped.

▶ Attach the ISOFIX or i-Size child restraint system to both mounting brackets in the vehicle.

Fastening a Top Tether

! **WARNING** Risk of injury or death if the rear seat backrests are not locked after Top Tether belts are fitted

The rear seat backrests may fold forwards when you are driving.

As a result, child restraint systems will no longer be able to perform their intended protective function. This may also cause additional injuries.

▶ Always lock rear seat backrests after fitting Top Tether belts.

▶ Observe the lock verification indicator.

If the rear seat backrest is not engaged and locked in place, the red lock verification indicator will be visible.

 If the child restraint system is equipped with a Top Tether belt:

The risk of injury may be reduced by Top Tether. The Top Tether belt enables an additional connection between the child restraint system attached with ISOFIX or i-Size and the vehicle.

Vehicles with adjustable head restraints:

- ▶ If necessary, slide the head restraint upwards (→ page 160).
- ▶ Guide Top Tether belt ③ under the head restraint between the two head restraint bars.

Vehicles without adjustable head restraints:

- ▶ Top Tether belt with one seat belt strap: guide Top Tether belt ③ over the centre of the head restraint.

or

- ▶ Top Tether belt with two seat belt straps: guide one Top Tether belt ③ past the head restraint on the right and left sides respectively.

All vehicles:

- ▶ Fit the ISOFIX or i-Size child restraint system with Top Tether. In doing so, comply with the child restraint system manufacturer's installation instructions.
- ▶ Hook Top Tether hook ② into Top Tether anchorage ① without twisting.
- ▶ Tension Top Tether belt ③. In doing so, comply with the child restraint system manufacturer's installation instructions.

Vehicles with adjustable head restraints:

- ▶ If necessary, slide the head restraint downwards (→ page 160). Make sure that you do not interfere with the correct routing of Top Tether belt ③.

Securing the child restraint system with the seat belt

⚠ WARNING Risk of accident if the rear bench seat, rear seat and seat backrest are not engaged

The rear bench seat, rear seat and seat backrest may fold forwards, even while the vehicle is in motion.

- As a result, the vehicle occupant will be pressed into the seat belt with increased force. The seat belt will not be able to protect as intended and could cause additional injury.
- Objects or loads in the boot or load compartment cannot be restrained by the seat backrest.

- ▶ Make sure that the rear bench seat, the rear seat and the seat backrest are engaged before every trip.

If the rear seat backrest is not engaged and locked in place, the red lock verification indicator will be visible.

- ▶ For a child restraint system of the category "Universal" or "Semi-Universal" ensure that this is approved for the vehicle seat.
- ▶ Fit the child restraint system.
The entire base of the child restraint system must always rest on the sitting surface of the seat.
- ▶ Always make sure that the shoulder belt strap is correctly routed from the seat belt outlet of the vehicle to the shoulder belt guide on the child restraint system.
The shoulder belt strap must be routed forwards from the seat belt outlet and, where possible, downwards to the child restraint system.
- ▶ **When fitting on the rear seat:** also secure Top Tether to the front passenger seat, if present.
- ▶ **When fitting on the front passenger seat:** if necessary, adjust the seat belt outlet as appropriate.

Child safety locks

Activating or deactivating the child safety lock for the rear doors

⚠ WARNING Risk of accident- and injury due to children left unattended in the vehicle

When children are left unattended in the vehicle, they can be expected in particular to

- open doors, thereby endangering other persons or road users.
- get out and be struck by oncoming traffic.
- operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:

- releasing the parking brake.
- changing the drive range.
- starting the vehicle.

- ▶ Never leave children unattended in the vehicle.
- ▶ When leaving the vehicle, always take the key with you and lock the vehicle.
- ▶ Keep the key out of reach of children.

⚠ WARNING Risk of fatal injury due to exposure to extreme heat or cold in the vehicle

If persons, particularly children, are subjected to prolonged exposure to intense heat or cold, there is a risk of severe injury or even death.

- ▶ Never leave persons, particularly children, unattended in the vehicle.

⚠ WARNING Risk of accident and injury due to children left unattended in the vehicle

If children are travelling in the vehicle, they could, in particular:

- open doors, thereby endangering other persons or road users.
- get out and be struck by oncoming traffic.

- operate vehicle equipment and become trapped, for example.
- ▶ Always activate the installed child safety locks if children are travelling in the vehicle.
 - ▶ Never leave children unattended in the vehicle.
 - ▶ When leaving the vehicle, always take the key with you and lock the vehicle.

Vehicles for the United Kingdom: observe the important safety notes in the "Notes on the additional door lock" section.

There are child safety locks for the rear doors and the rear side windows.

The child safety lock on the rear doors secures each door separately. The doors can no longer be opened from the inside.

- ▶ Press the lever in direction ① (activate) or ② (deactivate).
- ▶ Check the functionality of the child safety lock.

Activating and deactivating the child safety lock for the rear side windows

⚠ WARNING Risk of accident- and injury due to children left unattended in the vehicle

When children are left unattended in the vehicle, they can be expected in particular to

- open doors, thereby endangering other persons or road users.
- get out and be struck by oncoming traffic.
- operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:

- releasing the parking brake.
- changing the drive range.
- starting the vehicle.

▶ Never leave children unattended in the vehicle.

- ▶ When leaving the vehicle, always take the key with you and lock the vehicle.
- ▶ Keep the key out of reach of children.

⚠ WARNING Risk of fatal injury due to exposure to extreme heat or cold in the vehicle

If persons, particularly children, are subjected to prolonged exposure to intense heat or cold, there is a risk of severe injury or even death.

- ▶ Never leave persons, particularly children, unattended in the vehicle.

⚠ WARNING Risk of accident and injury due to children left unattended in the vehicle

If children are travelling in the vehicle, they could, in particular:

- open doors, thereby endangering other persons or road users.
- get out and be struck by oncoming traffic.
- operate vehicle equipment and become trapped, for example.

- ▶ Always activate the installed child safety locks if children are travelling in the vehicle.
- ▶ Never leave children unattended in the vehicle.
- ▶ When leaving the vehicle, always take the key with you and lock the vehicle.

Vehicles for the United Kingdom: observe the important safety notes in the "Notes on the additional door lock" section.

There are child safety locks for the rear doors and the rear side windows.

- ▶ **To activate/deactivate:** press button ②.

The rear side window can be opened or closed in the following cases:

- Indicator lamp ① is lit: via the switch on the driver's door
- Indicator lamp ① is off: via the switch on the corresponding rear door or driver's door

Occupant presence reminder

Function of the occupant presence reminder

The occupant presence reminder can help to remind you about a child who may have been forgotten in the rear compartment of the vehicle. It activates and deactivates automatically when the rear door is open for an extended period of time and a child which the system presumes to be present could enter or exit the vehicle.

When the vehicle is switched off, the **Do not leave persons or animals in the vehicle** message appears on the driver's display if the system was already automatically activated.

You can permanently deactivate the function in the multimedia system (→ page 125). When the system is deactivated, the  indicator lamp in the driver's display lights up.

Activating or deactivating the occupant presence reminder in the multimedia system

Multimedia system:

  **Settings**  **Vehicle**

 **Occupant protection**

 Activate or deactivate the function.

Key

Overview of key functions

⚠ WARNING Accident- and risk of injury with unsupervised children in the vehicle

If you leave children unattended in the vehicle, they can in particular

- Open doors and thereby endanger other persons or road users.
- get out of the car and are hit by traffic.
- Operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:

- releasing the parking brake.
- change the gearbox setting.
- start the vehicle.

▶ Never leave children unattended in the vehicle.

- ▶ When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- ▶ Keep the key out of reach of children.

! NOTE Damage to the key caused by magnetic fields

- ▶ Keep the key away from strong magnetic fields.

Vehicle key

- ① Locking
- ② Indicator lamp

- ③ Unlocking
- ④ Opens/closes the tailgate

i If indicator lamp ② does not light up after pressing the  or  button, the battery is weak or possibly discharged. Replace the battery as soon as possible.

Replace the key battery (→ page 128).

The key locks and unlocks the following components:

- Doors
- Socket flap
- Tailgate

If the vehicle is not opened within approximately 40 seconds after unlocking, it locks again. Anti-theft protection is primed again.

Do not keep the key together with electronic devices or metal objects. This can affect the key's functionality.

Activating/deactivating the acoustic locking verification signal

Multimedia system:

➔  ➔ Settings ➔ Vehicle
➔ Open/close

▶ Activate or deactivate the **Acoustic lock**.

Please observe:

The selected setting for the acoustic locking verification signal must comply with the relevant national road and traffic regulations. In some countries, including Germany, using the acoustic locking verification signal is forbidden by traffic laws (in accordance with §16 Para. 1 and §30 Para. 1 of the German national road traffic regulations). The driver of the vehicle must comply with these regulations. In countries where the use of this function is forbidden, this function is not activated in the vehicle and must not be activated.

Changing the unlocking settings

Possible unlocking functions of the key:

- Central unlocking
- Unlocking the driver's door and socket flap

▶ **To switch between settings:** press the  and  buttons simultaneously for approximately six seconds until the indicator lamp flashes twice.

Options if the unlocking function for the driver's door and socket flap has been selected:

- **To unlock the vehicle centrally:** press the  button twice.
- **Vehicles with KEYLESS-GO:** if you touch the inner surface of the door handle on the driver's door, only the driver's door and the socket flap are unlocked.

Deactivating the function of the key

Vehicles with KEYLESS-GO: if you deactivate the function of the key, the KEYLESS-GO functions are also deactivated. Access or drive authorization via

KEYLESS-GO is then no longer possible with that key. Activate the function of the key so that all of its functions are available once again.

You can also deactivate the key's function to reduce the key's energy consumption if you do not use the vehicle or a key for an extended period of time.

▶ Press and hold the key button .

▶ With the key button  pressed, immediately press key button  twice in quick succession.

The indicator light of the key lights up once briefly, and then again for longer.

 You have the following options to reactivate the key:

- Press any button on the key.
- Start the vehicle with the key in the centre console storage compartment(→ page 218).

Removing/inserting the emergency key

Removing the emergency key

- ▶ Press the release button ①. The emergency key ② is pushed out slightly.
- ▶ Pull out the emergency key ② until it engages in the intermediate position.
- ▶ Press the release button ① again and fully remove the emergency key ②.

Inserting the emergency key

- ▶ Press the release button ①.
 - ▶ Insert the emergency key ② to the intermediate position or fully until it engages.
- ① You can use the intermediate position of the emergency key ② to attach the key to a key ring.

Replacing the key battery

⚠ DANGER Risk of fatal injury due to swallowing batteries

Batteries contain toxic and corrosive substances. If batteries are swallowed or otherwise enter the body, severe internal burns can occur within two hours.

There is a risk of fatal injury!

- ▶ Keep the batteries out of the reach of children.
- ▶ If the lid and/or the battery compartment do not close securely, stop using the key and keep it away from children.
- ▶ If batteries are swallowed or otherwise enter the body, seek immediate medical attention.

 **ENVIRONMENTAL NOTE** Environmental damage due to improper disposal of batteries

Batteries contain pollutants. It is illegal to dispose of them with the household rubbish.

Dispose of batteries in an environmentally responsible manner. Take discharged batteries to a qualified specialist workshop or to a collection point for used batteries.

Requirements

- You require a CR 2032 3 V cell battery.

Mercedes-Benz recommends that you have the battery replaced at a qualified specialist workshop.

- Remove the emergency key (→ page 128).

- Press release knob ② down fully and slide cover ① in the direction of the arrow.
- Fold out cover ① in the direction of the arrow and remove.
- Remove battery compartment ③ and take out the discharged battery.
- Insert the new battery into battery compartment ③. Observe the positive pole marking in the battery compartment and on the battery when doing this.
- Push in battery compartment ③.
- Re-attach cover ① and push it until it engages.

Problems with the key, troubleshooting

You can no longer lock or unlock the vehicle

Possible causes:

- The key battery is weak or discharged.
- Check the battery using the indicator lamp (→ page 126).
- Replace the key battery, if necessary (→ page 128).
- Use the replacement key.
- Use the emergency key to lock or unlock (→ page 133).
- Have key checked at a qualified specialist workshop.

There is interference from a powerful radio signal source

Possible causes if the function of the key is impaired:

- high voltage power lines
- mobile phones
- electronic devices (notebooks, tablets)

- shielding due to metal objects or induction loops for electrical gate systems or automatic barriers

▶ Make sure that there is sufficient distance between the key and the potential source of interference.

You have lost a key

- ▶ Have the key deactivated at a qualified specialist workshop.
- ▶ If necessary, have the mechanical lock replaced as well.

Doors

Notes on the additional door lock

The additional door lock is only available for vehicles for the United Kingdom.

⚠ WARNING Risk of injury to persons inside the vehicle when the additional door lock is activated

If the additional door lock is activated, the doors can no longer be opened from the inside.

- ▶ Never leave persons, in particular children, unattended in the vehicle.
- ▶ If there are persons in the vehicle, do not activate the additional door lock.

The additional door lock is automatically activated in the following situations:

- The vehicle is locked using the key.
- The vehicle is locked using KEYLESS-GO.

If the vehicle has been locked via Mercedes me connect, the additional door lock is not activated (→ page 458).

If the additional door lock is activated, the doors cannot be opened from the inside.

- i** After locking you can issue a signal with the horn.

You can prevent the additional door lock from being activated by deactivating interior protection before locking the vehicle (→ page 149).

Unlocking/opening the doors from the inside

- ▶ **United Kingdom only:** observe the notes on the additional door lock (→ page 130).

- ▶ Pull the door **1** handle.

Centrally locking and unlocking the vehicle from the inside

▶ **To unlock:** Press ① button.

▶ **To lock:** Press ② button.

The red indicator lamp on button ② lights up once the vehicle is locked.

The socket flap is also locked and unlocked. The socket flap can be opened even if a key is detected in the car.

The vehicle is not unlocked:

- if you have locked the vehicle using the key
- if you have locked the vehicle using KEYLESS-GO

Locking/unlocking the vehicle with KEYLESS-GO

Requirements

- The key is outside the vehicle.
- The distance between the key and the vehicle does not exceed 1 m.
- The driver's door and the door on which the door handle is used are closed.

! **NOTE** Vehicle damage due to unintentional opening of the tailgate

- when using an automatic car wash
- when using a high pressure cleaner

▶ Deactivate the function of the key in these situations.

or

▶ Make sure that the key is at a minimum distance of 3 m away from the vehicle.

Observe the notes:

- on washing the vehicle in a car wash (→ page 22)
- on using a high pressure cleaner (→ page 501)

- ▶ **To unlock the vehicle:** touch the inner surface of the door handle.
- ▶ **To lock the vehicle:** touch sensor surface ① or ②.
- ▶ **Convenience closing:** touch recessed sensor surface ② until the closing process has been completed.

① Further information on convenience closing (→ page 142).

If you open the tailgate from outside, it is automatically unlocked.

Problems with KEYLESS-GO, troubleshooting

You can no longer lock or unlock the vehicle using KEYLESS-GO

Possible causes:

- The function of the key has been deactivated.
- The key battery is weak or discharged.
- ▶ Activate the function of the key (→ page 48).
- ▶ Check the battery using the indicator lamp (→ page 126).
- ▶ Replace the key battery, if necessary (→ page 128).
- ▶ Use the replacement key.
- ▶ Use the emergency key to lock or unlock (→ page 133).
- ▶ Have the vehicle and key checked at a qualified specialist workshop.

There is interference from a powerful radio signal source

Possible causes if the function of KEYLESS-GO is impaired:

- high voltage power lines
- mobile phones
- electronic devices (notebooks, tablets)
- shielding due to metal objects or induction loops for electrical gate systems or automatic barriers

▶ Make sure that there is sufficient distance between the key and the potential source of interference.

Activating/deactivating the automatic locking feature

The vehicle is locked automatically when the vehicle is switched on and the wheels are turning faster than walking pace.

- ▶ **To activate:** press and hold button ② for approximately five seconds until an acoustic signal sounds.
- ▶ **To deactivate:** press and hold button ① for approximately five seconds until an acoustic signal sounds.

The red indicator lamp on button ② lights up once the vehicle is locked.

In the following situations, there is a danger of being locked out when the function is activated:

- while the vehicle is being tow-started or pushed
- if the vehicle is being tested on a roller dynamometer

Activating or deactivating the automatic lock feature

Multimedia system:

→ ▶ Settings ▶ Vehicle
▶▶ Open/close

- ① The vehicle is locked automatically when the vehicle is switched on and the wheels are turning faster than walking pace.
- ▶ Activate or deactivate **Automatic locking**.

In the following situations, there is a danger of being locked out when the function is activated:

- The vehicle is being towed or pushed.
- If the vehicle is being tested on a roller dynamometer.

Locking/unlocking the vehicle with the emergency key

Locking/unlocking the driver's door with the emergency key

- ① If you wish to lock the vehicle entirely using the emergency key, first press the button for locking from the inside while the driver's door is open. Then proceed to lock the driver's door using the emergency key.
- ① If you unlock and open the driver's door with the emergency key, this triggers the anti-theft alarm system.
- ① Information regarding starting the vehicle with the key in the storage compartment (emergency operation mode) (→ page 218).

- ▶ Remove the emergency key (→ page 128).
- ▶ Insert the emergency key as far as it will go into the opening ① on the cover cap.
- ▶ Pull and hold the door handle.
- ▶ Pull the cover cap on the emergency key as straight as possible away from the vehicle until it releases.
- ▶ Release the door handle.

- ▶ **To unlock:** turn the emergency key anti-clockwise to position ①.
- ▶ **To lock:** turn the emergency key clockwise to position ①.
- ▶ Carefully press the cover cap onto the lock cylinder until it engages and is seated firmly.

Locking the front passenger door and rear doors

- ▶ Insert a suitable object, e.g. the emergency key, into opening ① on the door lock.
- ▶ **To lock the left-hand side of the vehicle:** turn the emergency key anti-clockwise as far as it will go.

- ▶ **To lock the right-hand side of the vehicle:** turn the emergency key clockwise as far as it will go.

If the locked door is closed, it can no longer be opened from the outside.

Load compartment

Opening the tailgate

! **NOTE** Damage to the tailgate caused by obstacles above the vehicle

The tailgate swings rearwards and upwards when it is opened.

- ▶ Make sure that there is sufficient space behind and above the tailgate.
- ▶ If the tailgate is unlocked, press the top of the Mercedes star located on the tailgate.
- ▶ **Vehicles with HANDS-FREE ACCESS:** make a kicking movement with your foot below the bumper (→ page 137).

Vehicles with an EASY-PACK tailgate

- ▶ Pull remote operating switch ① until the tailgate opens.
- or
- ▶ Press and hold the  button on the key.
- ▶ If the tailgate is unlocked, press the top of the Mercedes star.

- ▶ If the tailgate has stopped in an intermediate position, pull it upwards. Release it as soon as it begins to open.

If an obstacle obstructs the tailgate during the automatic opening process, blockage detection will stop the tailgate. The automatic blockage detection function is only an aid. It is not a substitute for you having to pay attention.

Closing the tailgate

! **WARNING** Risk of injury from unsecured items in the vehicle

If objects, luggage or loads are not secured or not secured sufficiently, they could slip, tip over or be thrown around and thereby hit vehicle occupants.

There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- ▶ Always stow objects in such a way that they cannot be thrown around.

- ▶ Before the journey, secure objects, luggage or loads against slipping or tipping over.

Observe the notes on loading the vehicle.

Notes on closing the tailgate: your vehicle is equipped with automatic key recognition.

Note that the tailgate will not be locked in the following situation:

- You have locked the vehicle and closed the tailgate while a key belonging to the vehicle is inside the vehicle and is detected.
and
- A second key belonging to the vehicle is not detected outside the vehicle.

Automatic key recognition is only an aid and is not a substitute for your attentiveness.

- ▶ Before locking, ensure that at least one key belonging to the vehicle is outside the vehicle.
- ▶ **To close the tailgate:** pull the tailgate downwards with the handle and let it drop into the lock.

Vehicles with an EASY-PACK tailgate

⚠ WARNING Risk of becoming trapped during automatic closing of the tailgate

Body parts may become trapped. There may be people in the closing area.

- ▶ Make sure that nobody is in the vicinity of the closing area.

Use one of the following options to stop the closing process:

- Press the  button on the key.
- Press or pull the remote operating switch on the driver's door.
- Press the closing or locking button on the tailgate.
- Press the top of the Mercedes star on the tailgate.

Vehicles with HANDS-FREE ACCESS: it is also possible to stop the closing process by making a kicking movement below the rear bumper.

- ▶ **To close the tailgate:** pull the tailgate downwards slightly. Release it as soon as it begins to close.

- ▶ Switch on the power supply or the vehicle.
- ▶ Push remote operating switch  until the tailgate is fully closed.

- ▶ Press closing button ① on the tailgate.

Vehicles with KEYLESS-GO

- ▶ Press locking button ② on the tailgate. If a key is detected outside the vehicle, the tailgate will close and the vehicle will be locked.
- ▶ Press and hold the  button on the key. The key must be in the vicinity of the vehicle.

Vehicles with HANDS-FREE ACCESS

- ▶ Make a kicking movement with your foot below the bumper (→ page 137).

Automatic reversing function for the tailgate

The tailgate is equipped with automatic blockage detection with a reversing function. If an obstacle obstructs the tailgate during the automatic closing process, it will automatically open again slightly. Automatic blockage detection with the reversing function is only an aid and is not a substitute for your attentiveness.

- ▶ During the closing process, ensure that no body parts remain within the closing area.

⚠ WARNING Risk of becoming trapped despite reversing function

The reversing function will not react:

- to soft, light and thin objects, e.g. fingers
- towards the end of the closing procedure

In these situations in particular, the reversing function cannot prevent someone being trapped.

- ▶ Ensure that no body parts are in the closing area.

If someone is trapped, either:

- Press the  button on the key.
- Press or pull the remote operating switch on the driver's door.
- Press the closing or locking button on the tailgate.
- Press the top of the Mercedes star on the tailgate.

HANDS-FREE ACCESS function

HANDS-FREE ACCESS allows you to open and close the tailgate, or even stop the opening and closing process at any point, by performing a kicking motion under the rear bumper. The transmission must be in position **P** for this function.

The kicking motion triggers the opening or closing process alternately.

- If you stop the tailgate opening process with a kicking motion, the tailgate is closed with the next kicking motion
- If you stop the tailgate closing process with a kicking motion, the tailgate is opened with the next kicking motion

In the following cases, the tailgate can only be closed with HANDS-FREE ACCESS:

- If the vehicle is switched on and the key's unlock function has been set so that only the driver's door is unlocked when activated (→ page 127).
- If the vehicle has been centrally locked from the inside (→ page 131).

Observe the notes when opening (→ page 135) and closing (→ page 135) the tailgate.

- ① Two warning tones sound when the tailgate is opening or closing.

! **NOTE** Vehicle damage due to unintentional opening of the tailgate

- when using an automatic car wash
- when using a high pressure cleaner

▶ Deactivate the function of the key in these situations.

or

▶ Make sure that the key is at a minimum distance of 3 m away from the vehicle.

Ensure that you are standing firmly on the ground when performing the kicking motion. You could otherwise lose your balance, e.g. on ice.

Observe the following notes:

- The key is behind the vehicle.

If the key is not recognised:

- Take the key in your hand.

or

- Ensure that the function of the key is activated (→ page 48).

- Stand at least 30 cm away from the vehicle when performing the kicking motion.
- Do not come into contact with the bumper when performing the kicking motion.
- Do not carry out the kicking motion too slowly.
- The kicking motion must be towards the vehicle and back again.
- **Vehicles with trailer hitch:** Perform the kicking motion to the left or right of the ball head.

- ① Detection range of the sensors

If several consecutive kicking motions are not successful, wait ten seconds.

System limits

The system may be impaired or inoperative in the following cases:

- The sensors are dirty, e.g. due to road salt or snow.
- The kicking motion is made using a prosthetic leg.

The tailgate can open or close unintentionally in the following situations:

- A person's arms or legs are moving in the sensor detection range, e.g. when polishing the vehicle or picking up objects.
- Objects are moved or placed behind the vehicle, e.g. a charging cable or luggage.
- Tension belts, tarps or other covers are pulled over the bumper.
- A protective mat with a length reaching over the loading sill down into the detection range of the sensors is used.
- The protective mat is not secured correctly.

- **Vehicles with trailer hitch:** Work is being carried out on the trailer hitch, trailers or rear bicycle racks.

Deactivate the function of the key (→ page 48) or do not carry the key about your person in such situations.

You can watch an animation on this topic via the following link:

Limiting the opening angle of the tailgate

Activating the opening angle limiter

You can limit the opening angle of the tailgate in the top half of its opening range up to a point shortly before the end position.

- ▶ Stop the opening procedure of the tailgate at the desired position.
- ▶ Press and hold the closing button on the tailgate until you hear a short tone. The opening angle limiter will be activated. The tailgate will then stop in the stored position when opened.

Fully opening the tailgate after it has stopped automatically

- ▶ Press the top of the Mercedes star on the tailgate again.

Deactivating the opening angle limiter

- ▶ Press and hold the closing button on the tailgate until two short tones sound.

Unlocking the tailgate with the emergency key

Requirements

- The rear seat backrest has been folded forward.
- The load compartment cover has been removed.

- ▶ Remove the emergency key (→ page 128).
- ▶ Insert emergency key ② into opening ① in the trim and push it in.
The tailgate will be unlocked.

Side windows

Opening and closing the side windows

- ⚠ **WARNING** Risk of becoming trapped when opening a side window

When you open a side window, parts of the body could be drawn in or become trapped between the side window and window frame.

- ▶ When opening, make sure that nobody is touching the side window.
- ▶ If someone is trapped, release the button immediately or pull it in order to close the side window again.

- ⚠ **WARNING** Risk of becoming trapped when closing a side window

When closing a side window, body parts could be trapped in the closing area in the process.

- ▶ When closing, make sure that no body parts are in the closing area.

- ▶ If someone is trapped, release the button immediately or press the button in order to reopen the side window.

- ⚠ **WARNING** Risk of becoming trapped when children operate the side windows

Children could become trapped if they operate the side windows, particularly when unattended.

- ▶ Activate the child safety lock for the rear side windows.
- ▶ When leaving the vehicle, always take the key with you and lock the vehicle.
- ▶ Never leave children unattended in the vehicle.

Requirements

- The power supply or the vehicle has been switched on.

- ① Closing
- ② Opening

The buttons on the driver's door take precedence.

- ▶ **To start automatic operation:** press the  button beyond the point of resistance or pull and release it.
- ▶ **To interrupt automatic operation:** press or pull the  button again.

When the vehicle is switched off, you can continue to operate the side windows.

This function will be available for around four minutes or until a front door is opened.

Automatic reversing function of the side windows

If an obstacle impedes a side window during the closing process, the side window will open again automatically. The automatic reversing function is only an aid and is not a substitute for your attentiveness.

- ▶ During the closing process, make sure that no body parts are in the closing area.

⚠ WARNING Risk of becoming trapped despite there being reversing protection on the side window

The reversing function does not react:

- to soft, light and thin objects, e.g. fingers.
- during resetting.

The reversing function cannot prevent someone from becoming trapped in these situations.

- ▶ During the closing process, make sure that no body parts are in the closing area.
- ▶ If someone becomes trapped, press the  button to open the side window again.

Automatic function of the side windows

In the following cases, the side windows will be closed automatically when the vehicle is switched off:

- if it starts to rain
Rain will be detected by a rain sensor on the windscreen.
- in extreme temperatures
- after a certain time (depending on the on-board electrical system voltage)
- if there is a malfunction in the power supply

The side windows will be closed as far as the ventilation position.

Vehicles with a panorama sliding sunroof: the side windows will be closed completely if the sliding sunroof is open.

If the side windows are obstructed during automatic closing, the side window concerned will open again slightly. After another automatic closing process, the automatic function may be deactivated. The automatic function will be active again the next time the vehicle is started.

Convenience opening (ventilating the vehicle before starting a journey)

⚠ WARNING Risk of entrapment when opening a side window

When opening a side window, parts of the body could be drawn in or become trapped between the side window and window frame.

- ▶ When opening, make sure that nobody is touching the side window.
- ▶ Release the button immediately if somebody becomes trapped.

Requirements

- The key is near the vehicle.

▶ Press and hold the  button on the key.

The following functions are performed:

- The vehicle is unlocked.
- The side windows are open.
- The panoramic sunroof opens.
- The seat ventilation of the driver's seat is switched on.

ⓘ If the roller sunblind of the panoramic sliding sunroof is closed, the roller sunblind is opened first.

▶ **Interrupt convenience opening:** Release the key .

▶ **Continue convenience opening:** Press key  again and keep it pressed.

Convenience closing (closing the vehicle from outside)

⚠ WARNING Risk of entrapment due to not paying attention during convenience closing

When the convenience closing feature is operating, parts of the body could become trapped in the closing area of the side window and the sliding sunroof.

- ▶ When the convenience closing feature is operating, monitor the entire closing process and make sure that no body parts are in the closing area.

Requirements

- The key is near the vehicle.

▶ Press and hold the  button on the key.

The following functions are performed:

- The vehicle is locked.
- The side windows are closed.
- The panoramic sliding roof is closed.

▶ **To interrupt convenience closing:** release the  button.

▶ **To continue convenience closing:** press and hold the  button again.

❗ Convenience closing also functions with KEY-LESS-GO (→ page 131).

Resolving problems with the side windows

⚠ WARNING Risk of becoming trapped or fatally injured if reversing protection is not activated

If you close a side window again immediately after it has been blocked, the side window will close with increased or maximum force. The reversing function is then not active and body parts may become trapped.

- ▶ Make sure that no parts of the body are in the closing area.
- ▶ To stop the closing process, release the button or press the button again to reopen the side window.

A side window cannot be closed and you cannot see the cause.

▶ Check to see whether any objects are in the window guide.

▶ Adjust the side windows.

Adjusting the side windows

If a side window is obstructed during closing and reopens again immediately:

▶ Immediately after this, pull and hold the corresponding button again until the side window has closed and hold the button for at least one more second (re-adjustment). The side window will be closed without the automatic reversing function.

If the side window is obstructed again and reopens again immediately:

▶ Immediately after this, pull and hold the corresponding button again until the side window has closed and hold the button for at least one more second (follow-up adjustment). The side window will be closed without the automatic reversing function.

The side windows cannot be opened or closed using the convenience opening feature.

Possible causes:

- The key battery is weak or discharged.
- ▶ Check the battery using the indicator lamp (→ page 126).
- ▶ Replace the key battery, if necessary (→ page 128).

Sliding sunroof

Opening and closing the sliding sunroof

❗ The term "sliding sunroof" also refers to the panorama sliding sunroof.

⚠ WARNING Risk of becoming trapped when the sliding sunroof is being opened and closed

Body parts may become trapped in the range of movement.

- ▶ During opening and closing, make sure that no body parts are in the range of movement.
- ▶ Release the button immediately if somebody becomes trapped.

or

- ▶ Briefly press the button in any direction during automatic operation. The opening or closing process will be stopped.

⚠ WARNING Risk of entrapment if the sliding sunroof is operated by children

Children operating the sliding sunroof could get caught in the moving parts, particularly if unattended.

- ▶ Never leave children unattended in the vehicle.
- ▶ When leaving the vehicle, always take the key with you and lock the vehicle.

⚠ WARNING Risk of becoming trapped when the roller sunblind is being opened and closed

Body parts may become trapped between the roller sunblind and frame or sliding roof.

- ▶ When opening or closing, make sure that no body parts are in the roller sunblind's range of movement.
- ▶ Release the button immediately if somebody becomes trapped.

or

- ▶ Briefly press the button in any direction during automatic operation. The opening or closing process will be stopped.

! NOTE Malfunction due to snow and ice

Snow and ice may cause the sliding sunroof to malfunction.

- ▶ Open the sliding sunroof only if it is free of snow and ice.

! NOTE Damage caused by protruding objects

Objects that protrude from the sliding sunroof may damage the seals.

- ▶ Do not allow anything to protrude from the sliding sunroof.

! NOTE Damage to the panorama sliding sunroof due to non-approved roof luggage racks

The panorama sliding sunroof may be damaged by the roof luggage rack if you attempt to open it when using a roof luggage rack not tested and approved for Mercedes-Benz.

- ▶ When a roof luggage rack is fitted, open the panorama sliding sunroof only if this has been tested and approved for Mercedes-Benz.

The panorama sliding sunroof may be raised to allow ventilation of the vehicle interior.

- ① Raise
- ② Open
- ③ Close/lower

Use the  button to operate the panorama sliding sunroof and the roller sunblind.

The panorama sliding sunroof can be operated only when the roller sunblind is open.

- ▶ Check whether the sliding sunroof can be raised or opened when a roof luggage rack is fitted.
- ▶ **To start automatic operation:** press the  button beyond the point of resistance or pull and release it.
- ▶ **To interrupt automatic operation:** briefly press the  button in any direction. The opening/closing process will be stopped.

Automatic reversing function of the sliding sunroof

If an obstacle obstructs the sliding sunroof during the closing process, the sliding sunroof will open again automatically. The automatic reversing function is only an aid and is not a substitute for your attentiveness.

- ▶ During the closing process, make sure that no body parts are in the closing area.

⚠ WARNING Risk of becoming trapped despite the reversing function being active

In particular, the reversing function does not react:

- to soft, light and thin objects, e.g. fingers.
- towards the end of the closing procedure.
- during resetting.

- ▶ During the closing process, make sure that no body parts are in the closing area.
- ▶ Release the button immediately if somebody becomes trapped.

or

- ▶ Briefly press the button in any direction during automatic operation. The closing process will be stopped.

Automatic reversing function of the roller sunblind

If an obstacle obstructs the roller sunblind during the closing process, the roller sunblind will open again automatically. The automatic reversing func-

tion is only an aid and is not a substitute for your attentiveness.

- ▶ When closing the roller sunblind, make sure that no body parts are in the area of movement.

⚠ WARNING Risk of becoming trapped despite reversing function

In particular, the reversing function does not react to soft, light and thin objects, e.g. fingers.

- ▶ When closing the roller sunblind, make sure that no body parts are in the range of movement.
- ▶ Release the button immediately if somebody becomes trapped.

or

- ▶ Briefly press the button in any direction during the automatic closing process. The closing process will be stopped.

Automatic functions of the sliding sunroof

- ⓘ The term "sliding sunroof" also refers to the panorama sliding sunroof.

The sliding sunroof will be closed automatically when the vehicle has been switched off in the following situations:

- if it starts to rain
Rain is detected by a rain sensor on the windscreen.
- in extreme temperatures
- after a certain time (depending on the on-board electrical system voltage)
- if there is a malfunction in the power supply

The sliding sunroof will rise at the rear in order to continue ventilating the vehicle interior.

If the sliding sunroof is obstructed during an automatic closing procedure, it will be opened again slightly. The automatic function for the sliding sunroof and the side windows will then be deactivated.

Rain closing function when driving

Vehicles with a panorama sliding sunroof: if it starts to rain, the raised sliding sunroof will automatically be lowered while the vehicle is in motion.

Automatic lowering function

Vehicles with a panorama sliding sunroof: if the sliding sunroof is raised at the rear, it will automatically be lowered slightly at higher speeds. At low speeds, it will be raised again automatically.

⚠ WARNING Risk of becoming trapped by automatic lowering of the sliding sunroof

At higher speeds, the raised sliding sunroof will automatically be lowered slightly at the rear.

- ▶ Make sure that nobody reaches into the sliding sunroof's range of movement while the vehicle is in motion.
- ▶ If somebody becomes trapped, briefly push the sliding sunroof button forwards or backwards.

- ① By pushing or pulling the  button, you can interrupt the automatic functions "Rain closing function when driving" and "Automatic lowering".

Rectifying problems with the sliding sunroof

⚠ WARNING Risk of becoming trapped or fatal injuries when the sliding sunroof is closed again

If the sliding sunroof is closed again immediately after it has been blocked or reset, it will close with increased force.

- ▶ Make sure that no parts of the body are in the closing area.
- ▶ Release the button immediately if somebody becomes trapped.

or

- ▶ Briefly press the button in any direction during the automatic closing process. The closing process will be stopped.

The sliding sunroof cannot be closed and you cannot see the cause.

- ① The term "sliding sunroof" also refers to the panorama sliding sunroof.

If the sliding sunroof is obstructed during closing and reopens again slightly:

- ▶ Immediately after automatic reversing, pull and hold the  button down again to the point of resistance until the sliding sunroof is closed. The sliding sunroof will be closed with increased force.

If the sliding sunroof is obstructed again and opens again slightly:

- ▶ Repeat the previous step. The sliding sunroof will be closed again with increased force.

Vehicles with a panorama sliding sunroof: the sliding sunroof or the roller sunblind is not operating smoothly.

- ▶ Reset the sliding sunroof and the roller sunblind.

Resetting the sliding sunroof and the roller sunblind

- ▶ Pull and hold the  button little by little until the sliding sunroof is fully closed.
- ▶ Pull and hold the  button little by little until the roller sunblind is fully closed.
- ▶ Use automatic operation to fully open and then close the sliding sunroof.

Anti-theft protection

Function of the immobiliser

The immobiliser prevents your vehicle from being started without the correct key.

The immobiliser is automatically activated when the vehicle is switched off, and deactivated when the vehicle is switched on.

ATA (Anti-Theft Alarm system)

Function of the ATA system

If the ATA system is primed, a visual and audible alarm is triggered in the following situations:

- when a door is opened
- when the tailgate is opened
- when the bonnet is opened
- when interior protection is triggered (→ page 149)
- when tow-away protection is triggered (→ page 148)

The ATA system is primed automatically after approximately ten seconds in the following situations:

- After locking the vehicle with the key
- After locking the vehicle using KEYLESS-GO

Indicator lamp ① flashes when the ATA system is primed.

The ATA system is deactivated automatically in the following situations:

- After unlocking the vehicle with the key
- After unlocking the vehicle using KEYLESS-GO

- After pressing the start/stop button with the key in the storage compartment (→ page 218)

Deactivating the ATA

- ▶ Press the ,  or  button on the key.

or

- ▶ Press the start/stop button with the key in the storage compartment (→ page 218)

Deactivating the alarm using KEYLESS-GO

- ▶ Grasp the outside door handle with the key outside the vehicle.

Function of tow-away protection

An audible and visual alarm is triggered if an alteration to your vehicle's angle of inclination is detected while tow-away protection is primed.

Tow-away protection is automatically primed after about 60 seconds:

- After locking the vehicle with the key
- After locking the vehicle using KEYLESS-GO

Tow-away protection is only primed when the following components are closed:

- Doors
- Tailgate

Tow-away protection is automatically deactivated:

- After pressing the  or  button on the key
- After pressing the start/stop button with the key in the storage compartment (→ page 218)
- After unlocking the vehicle using KEYLESS-GO
- When using HANDS-FREE ACCESS

Information on collision detection on a parked vehicle (→ page 263).

Priming/deactivating tow-away protection

Multimedia system:

- ➔  ➔ Settings ➔ Vehicle
- ➔ Opening/closing ➔ Vehicle protection
- ▶ Prime or deactivate **Tow-away protection**.

Tow-away protection is primed again in the following cases:

- The vehicle is unlocked again.
- A door is opened.
- The vehicle is locked again.

Function of interior protection

When interior protection is primed, a visual and audible alarm is triggered if movement is detected in the vehicle interior.

Interior protection is primed automatically after approximately ten seconds:

- after locking the vehicle with the key
- after locking the vehicle using KEYLESS-GO

Interior protection is only primed when the following components are closed:

- Doors
- Tailgate

Interior protection is automatically deactivated:

- after pressing the  or  button on the key
- after pressing the start/stop button with the key in the stowage compartment (→ page 218)
- after unlocking the vehicle using KEYLESS-GO
- when using HANDS-FREE ACCESS

The following situations can lead to a false alarm:

- when there are moving objects such as mascots in the vehicle interior
- if a side window is open
- if the panoramic sunroof is open

Activating/deactivating interior protection

Multimedia system:

- ➔  ➔ Settings ➔ Vehicle
- ➔ Opening/closing ➔ Vehicle protection
- ▶ Activate or deactivate **Interior protection**.

Interior protection is activated again in the following cases:

- The vehicle is unlocked again.
- A door is opened.
- The vehicle is locked again.

Notes on the correct driver's seat position

⚠ WARNING Risk of accident due to adjusting the vehicle settings while the vehicle is in motion

You could lose control of the vehicle in the following situations in particular:

- if you adjust the driver's seat, the head restraint, the steering wheel or the mirror while the vehicle is in motion
- if you fasten your seat belt while the vehicle is in motion

▶ Before starting the vehicle: in particular, adjust the driver's seat, head restraint, steering wheel and mirror, and fasten your seat belt.

Ensure the following when adjusting steering wheel ①, seat belt ② and driver's seat ③:

- You are sitting as far away from the driver's airbag as possible, taking the following points into consideration:
- You are sitting in an upright position
- Your thighs are slightly supported by the seat cushion

- Your legs are not fully extended and you can depress the pedals properly
- The back of your head is supported at eye level by the centre of the head restraint
- You can hold the steering wheel with your arms slightly bent
- You can move your legs freely
- You can see all the indicators on the driver's display clearly
- You have a good overview of the traffic conditions
- Observe the notes on correctly fastening the seat belt (→ page 87).

Notes on grab handles

⚠ WARNING Risk of injury due to excessive load on the grab handles

If you apply your full body weight to the grab handle or pull it abruptly, the grab handle may be damaged or come loose from its anchorage. This may result in injuries.

- ▶ Use the grab handles only to stabilise the seating position or to assist in getting in and out of the seat.

Seats

Adjusting the front seat mechanically (without Seat Comfort Package)

- ⚠ WARNING** Risk of becoming trapped if the seats are adjusted by children

Children could become trapped if they adjust the seats, particularly when unattended.

- ▶ When leaving the vehicle, always take the key with you and lock the vehicle.
- ▶ Never leave children unattended in the vehicle.

This also applies to the Digital Vehicle Key.

- ⚠ WARNING** Risk of becoming trapped during seat adjustment

When you adjust a seat, you or other vehicle occupants could become trapped, e.g. on the seat guide rail.

- ▶ Make sure when adjusting a seat that no one has any body parts in the sweep of the seat.

Observe the safety notes on "Airbags" and "Children in the vehicle".

- ⚠ WARNING** Risk of accident due to the driver's seat not being engaged

The driver's seat may move unexpectedly while driving.

This could cause you to lose control of the vehicle.

- ▶ Always make sure that the driver's seat is engaged before starting the vehicle.

- ⚠ WARNING** Risk of accident due to adjusting the vehicle settings while the vehicle is in motion

You could lose control of the vehicle in the following situations in particular:

- if you adjust the driver's seat, the head restraint, the steering wheel or the mirror while the vehicle is in motion
- if you fasten your seat belt while the vehicle is in motion

- ▶ Before starting the vehicle: in particular, adjust the driver's seat, head restraint, steering wheel and mirror, and fasten your seat belt.

- ⚠ WARNING** Risk of becoming trapped if the seat height is adjusted carelessly

If you adjust the seat height carelessly, you or other vehicle occupants could be trapped and thereby injured.

Children in particular could accidentally press the electrical seat adjustment buttons and become trapped.

- ▶ While moving the seats, make sure that hands or other body parts do not get under the lever assembly of the seat adjustment system.

⚠ WARNING Risk of injury due to head restraints not being fitted or being adjusted incorrectly

If head restraints have not been installed or have not been adjusted correctly, there is an increased risk of injury in the head and neck area, e.g. in the event of an accident or when braking.

- ▶ Always drive with the head restraints fitted.
- ▶ Before driving off, make sure for every vehicle occupant that the centre of the head restraint supports the back of the head at about eye level.

Do not interchange the head restraints of the front and rear seats. Otherwise, you will not be able to adjust the height and angle of the head restraints correctly.

Adjust the head restraint fore-and-aft position so that it is as close as possible to the back of your head.

⚠ WARNING Risk of injury or death due to incorrect seat position

The seat belt will not offer the intended level of protection if you have not moved the seat backrest to an almost vertical position.

In particular, you may slip under the seatbelt and injure yourself.

- ▶ Adjust the seat properly before beginning your journey.
- ▶ Always ensure that the seat backrest is in an almost vertical position and that the shoulder section of your seat belt is routed across the centre of your shoulder.

⚠ WARNING Risk of injury due to excessive load on the grab handles

If you apply your full body weight to the grab handle or pull it abruptly, the grab handle may be damaged or come loose from its anchorage. This may result in injuries.

- ▶ Use the grab handles only to stabilise the seating position or to assist in getting in and out of the seat.

⚠ WARNING Risk of potentially fatal injuries due to objects trapped under the front passenger seat

Objects trapped under the front passenger seat may interfere with the function of the automatic front passenger airbag shutoff or damage the system.

- ▶ Do not stow any objects under the front passenger seat.
- ▶ When the front passenger seat is occupied, ensure that no objects have become trapped beneath the front passenger seat.

Adjusts the seat fore-and-aft position

- ▶ Lift lever ① and slide the seat into the desired position.
- ▶ Make sure that the seat is engaged.

- ▶ To adjust the seat height: push or pull lever ② until the desired position has been reached.
- ▶ To adjust the seat backrest inclination: turn handwheel ③ forwards and backwards until the desired position has been reached.

Adjusting the front seat mechanically (with Seat Comfort Package)

⚠ WARNING Risk of becoming trapped if the seats are adjusted by children

Children could become trapped if they adjust the seats, particularly when unattended.

- ▶ When leaving the vehicle, always take the key with you and lock the vehicle.
- ▶ Never leave children unattended in the vehicle.

This also applies to the Digital Vehicle Key.

⚠ WARNING Risk of becoming trapped during seat adjustment

When you adjust a seat, you or other vehicle occupants could become trapped, e.g. on the seat guide rail.

- ▶ Make sure when adjusting a seat that no one has any body parts in the sweep of the seat.

Observe the safety notes on "Airbags" and "Children in the vehicle".

⚠ WARNING Risk of accident due to the driver's seat not being engaged

The driver's seat may move unexpectedly while driving.

This could cause you to lose control of the vehicle.

- ▶ Always make sure that the driver's seat is engaged before starting the vehicle.

⚠ WARNING Risk of accident due to adjusting the vehicle settings while the vehicle is in motion

You could lose control of the vehicle in the following situations in particular:

- if you adjust the driver's seat, the head restraint, the steering wheel or the mirror while the vehicle is in motion
- if you fasten your seat belt while the vehicle is in motion

- ▶ Before starting the vehicle: in particular, adjust the driver's seat, head restraint, steering wheel and mirror, and fasten your seat belt.

⚠ WARNING Risk of becoming trapped if the seat height is adjusted carelessly

If you adjust the seat height carelessly, you or other vehicle occupants could be trapped and thereby injured.

Children in particular could accidentally press the electrical seat adjustment buttons and become trapped.

- ▶ While moving the seats, make sure that hands or other body parts do not get under the lever assembly of the seat adjustment system.

⚠ WARNING Risk of injury due to head restraints not being fitted or being adjusted incorrectly

If head restraints have not been installed or have not been adjusted correctly, there is an increased risk of injury in the head and neck area, e.g. in the event of an accident or when braking.

- ▶ Always drive with the head restraints fitted.
- ▶ Before driving off, make sure for every vehicle occupant that the centre of the head restraint supports the back of the head at about eye level.

Do not interchange the head restraints of the front and rear seats. Otherwise, you will not be able to adjust the height and angle of the head restraints correctly.

Adjust the head restraint fore-and-aft position so that it is as close as possible to the back of your head.

⚠ WARNING Risk of injury or death due to incorrect seat position

The seat belt will not offer the intended level of protection if you have not moved the seat backrest to an almost vertical position.

In particular, you may slip under the seatbelt and injure yourself.

- ▶ Adjust the seat properly before beginning your journey.
- ▶ Always ensure that the seat backrest is in an almost vertical position and that the shoulder section of your seat belt is routed across the centre of your shoulder.

⚠ WARNING Risk of injury due to excessive load on the grab handles

If you apply your full body weight to the grab handle or pull it abruptly, the grab handle may be damaged or come loose from its anchorage. This may result in injuries.

- ▶ Use the grab handles only to stabilise the seating position or to assist in getting in and out of the seat.

⚠ WARNING Risk of potentially fatal injuries due to objects trapped under the front passenger seat

Objects trapped under the front passenger seat may interfere with the function of the automatic front passenger airbag shutoff or damage the system.

- ▶ Do not stow any objects under the front passenger seat.
- ▶ When the front passenger seat is occupied, ensure that no objects have become trapped beneath the front passenger seat.

Adjusts the seat fore-and-aft position

- ▶ Lift lever ② and slide the seat into the desired position.
- ▶ Make sure that the seat is engaged.

- ▶ **To adjust the seat cushion length (driver's seat only):** lift lever ① and slide the front section of the seat cushion forwards or backwards.
- ▶ **To adjust the seat cushion inclination:** turn handwheel ③ forwards and backwards until the desired position has been reached.
- ▶ **To adjust the seat height:** push or pull lever ④ until the desired position has been reached.

- ▶ **To adjust the seat backrest inclination:** turn handwheel ⑤ forwards and backwards until the desired position has been reached.

Adjusting the front seat electrically

- ⚠ **WARNING** Risk of becoming trapped if the seats are adjusted by children

Children could become trapped if they adjust the seats, particularly when unattended.

- ▶ When leaving the vehicle, always take the key with you and lock the vehicle.
- ▶ Never leave children unattended in the vehicle.

You can adjust the seats when the vehicle is switched off.

- ⚠ **WARNING** Risk of becoming trapped during seat adjustment

When you adjust a seat, you or other vehicle occupants could become trapped, e.g. on the seat guide rail.

- ▶ Make sure when adjusting a seat that no one has any body parts in the sweep of the seat.

Observe the safety notes on "Airbags" and "Children in the vehicle".

- ⚠ **WARNING** Risk of becoming trapped if the seat height is adjusted carelessly

If you adjust the seat height carelessly, you or other vehicle occupants could be trapped and thereby injured.

Children in particular could accidentally press the electrical seat adjustment buttons and become trapped.

- ▶ While moving the seats, make sure that hands or other body parts do not get under the lever assembly of the seat adjustment system.

⚠ WARNING Risk of injury due to head restraints not being fitted or being adjusted incorrectly

If head restraints have not been installed or have not been adjusted correctly, there is an increased risk of injury in the head and neck area, e.g. in the event of an accident or when braking.

- ▶ Always drive with the head restraints fitted.
- ▶ Before driving off, make sure for every vehicle occupant that the centre of the head restraint supports the back of the head at about eye level.

Do not interchange the head restraints of the front and rear seats. Otherwise, you will not be able to adjust the height and angle of the head restraints correctly.

Adjust the head restraint fore-and-aft position so that it is as close as possible to the back of your head.

⚠ WARNING Risk of injury or death due to incorrect seat position

The seat belt will not offer the intended level of protection if you have not moved the seat backrest to an almost vertical position.

In particular, you may slip under the seatbelt and injure yourself.

- ▶ Adjust the seat properly before beginning your journey.
- ▶ Always ensure that the seat backrest is in an almost vertical position and that the shoulder section of your seat belt is routed across the centre of your shoulder.

⚠ WARNING Risk of injury due to excessive load on the grab handles

If you apply your full body weight to the grab handle or pull it abruptly, the grab handle may be damaged or come loose from its anchorage. This may result in injuries.

- ▶ Use the grab handles only to stabilise the seating position or to assist in getting in and out of the seat.

⚠ WARNING Risk of potentially fatal injuries due to objects trapped under the front passenger seat

Objects trapped under the front passenger seat may interfere with the function of the automatic front passenger airbag shutoff or damage the system.

- ▶ Do not stow any objects under the front passenger seat.
- ▶ When the front passenger seat is occupied, ensure that no objects have become trapped beneath the front passenger seat.

- ① Seat backrest inclination
- ② Seat height
- ③ Seat cushion inclination
- ④ Seat fore-and-aft position

▶ Save the settings with the memory function (→ page 168).

Adjusting the 4-way lumbar support

- ① Higher
- ② Softer
- ③ Lower
- ④ Firmer

▶ Use buttons ① to ④ to adjust the contour of the backrest.

Head restraints

Adjusting the front seat head restraints manually

⚠ WARNING Risk of accident due to adjusting the vehicle settings while the vehicle is in motion

You could lose control of the vehicle in the following situations in particular:

- if you adjust the driver's seat, the head restraint, the steering wheel or the mirror while the vehicle is in motion
- if you fasten your seat belt while the vehicle is in motion

▶ Before starting the vehicle: in particular, adjust the driver's seat, head restraint, steering wheel and mirror, and fasten your seat belt.

⚠ WARNING Risk of injury due to head restraints not being fitted or being adjusted incorrectly

If head restraints have not been installed or have not been adjusted correctly, there is an increased risk of injury in the head and neck area, e.g. in the event of an accident or when braking.

- ▶ Always drive with the head restraints fitted.
- ▶ Before driving off, make sure for every vehicle occupant that the centre of the head restraint supports the back of the head at about eye level.

Do not interchange the head restraints of the front and rear seats. Otherwise, you will not be able to adjust the height and angle of the head restraints correctly.

Adjust the head restraint fore-and-aft position so that it is as close as possible to the back of your head.

- ▶ **To raise:** pull the head restraint up.
- ▶ **To lower:** press release knob ① in the direction of the arrow and push the head restraint down.
- ▶ **To move the driver's head restraint forwards:** press release knob ② and pull the head restraint forwards.

- ▶ **To move the driver's head restraint backwards:** press release knob ② and push the head restraint backwards.

■ Adjusting the head restraints of the rear seats manually

⚠ WARNING Risk of injury due to head restraints not being fitted or being adjusted incorrectly

If head restraints have not been installed or have not been adjusted correctly, there is an increased risk of injury in the head and neck area, e.g. in the event of an accident or when braking.

- ▶ Always drive with the head restraints fitted.
- ▶ Before driving off, make sure for every vehicle occupant that the centre of the head restraint supports the back of the head at about eye level.

Do not interchange the head restraints of the front and rear seats. Otherwise, you will not be able to adjust the height and angle of the head

restraints correctly. Adjust the head restraint fore-and-aft position so that it is as close as possible to the back of your head.

- ▶ **To raise:** pull the head restraint up.
- ▶ **To lower:** press release button ① and push the head restraint down.

- ▶ **If the centre seat on the second row of seats is not occupied:** press the head restraint down all the way.

▶ Fitting/removing the rear seat head restraints

⚠ WARNING Risk of injury due to head restraints not being fitted or being adjusted incorrectly

If head restraints have not been installed or have not been adjusted correctly, there is an increased risk of injury in the head and neck area, e.g. in the event of an accident or when braking.

- ▶ Always drive with the head restraints fitted.
- ▶ Before driving off, make sure for every vehicle occupant that the centre of the head restraint supports the back of the head at about eye level.

Do not interchange the head restraints of the front and rear seats. Otherwise, you will not be able to adjust the height and angle of the head restraints correctly.

Adjust the head restraint fore-and-aft position so that it is as close as possible to the back of your head.

Removing

- ▶ Release the rear seat backrest and fold it forwards slightly (→ page 28).
- ▶ Pull the head restraint upwards as far as it will go.

- ▶ Push release knob ① in the direction of the arrow and pull out the head restraint.

Fitting

- ▶ Insert the head restraint such that the notches on the bar are on the left when viewed in the direction of travel.
- ▶ Push the head restraint down until it engages.

- ▶ Fold the rear seat backrest back until it engages.

Configuring the seat settings

Multimedia system:

→ [Home] ▶▶ Comfort ▶▶ Seat

Adjusting the air cushions

- ▶ In the corresponding menu, adjust the air cushions for **Lumbar** or **Side bolsters**.

Setting automatic seat adjustment

⚠ WARNING Risk of becoming trapped during adjustment of the driver's seat after calling up a driver profile

Selecting a user profile may trigger an adjustment of the driver's seat to the position saved under the user profile. You or other vehicle occupants could be injured in the process.

- ▶ Make sure that when the position of driver's seat is being adjusted using the mul-

timedia system, no people or body parts are in the seat's range of movement.

If there is a risk of someone becoming trapped, immediately stop the adjustment process by:

- ▶ a) Pressing the warning message on the central display.

or

- ▶ b) Pressing a position button of the memory function or a seat adjustment switch in the driver's door.

The adjustment process is stopped.

Multimedia system:

→ [Home] ▶▶ Comfort ▶▶ Seat
▶▶ Position seat automatically

Manually adjusting driver's seat and steering wheel position to body size

The vehicle calculates a suitable driver's seat and steering wheel position on the basis of the driver's body size and sets this directly.

- ▶ **To set the unit of measurement:** select **cm** or **ft/in.**
- ▶ Set the size using the scale.
- ▶ Select **Start positioning.**
The driver's seat and steering wheel position is adjusted to the body size that has been set.
- ① You can also configure these settings via the Mercedes me user account for your user profile. By synchronising the profiles in the vehicle and the Mercedes me connect profiles, you can carry over these settings for your vehicle. Further information about synchronising user profiles (→ page 369).
- ① If the driver's seat and steering wheel position calculated by the vehicle is not practical or comfortable, it can be manually adapted at any time via the control buttons.
The outside mirrors are not set via this function. Instead, they have to be set manually via the operating switches.

Resetting seat settings

Multimedia system:

→  ▶▶ **Comfort** ▶▶ **Seat**

- ▶ Select **Reset.**
- ▶ Select  for the desired seat.
The settings for the selected seat are reset.

Switching the seat heating on/off

⚠ WARNING Risk of burns due to repeatedly switching on the seat heating

Repeatedly switching on the seat heating can cause the seat cushion and seat backrest padding to become very hot.

In particular, the health of persons with limited temperature sensitivity or a limited ability to react to high temperatures may be affected or they may even suffer burn-like injuries.

- ▶ Do not repeatedly switch on the seat heating.

To protect against overheating, the seat heating may be temporarily deactivated after it has been switched on repeatedly.

! **NOTE** Damage to the seats caused by objects or documents when the seat heater is switched on

When the seat heater is switched on, overheating may occur due to objects or documents placed on the seats e.g. seat cushions or child seats. This could cause damage to the seat surface.

- ▶ Make sure that no objects or documents are on the seats when the seat heater is switched on.

Requirements

- The power supply is switched on.

- ▶ Press button ① repeatedly until the desired heating level is set. Depending on the heating level, up to three indicator lamps will light up. If all indicator lamps are off, the seat heating is switched off.

The seat heating will automatically switch down from the three heating levels after around 8, 10 and 20 minutes. For optimum seating comfort,

the seat heating can remain switched on at reduced power after 20 minutes.

- ① The seat heating will be deactivated when the vehicle is in **ECO+** (→ page 207) climate mode and when you are using the range maximisation function (→ page 225).
- ① When the outside temperature is low, the seat heating may switch on automatically to one of the three heating levels depending on the vehicle interior temperature and remain switched on for an extended time. This will be indicated by the respective indicator lamps. You can change the heating level manually at any time by pressing button ①, which will override the automatic seat heating function.

Switching the seat ventilation on/off

Requirements

- The power supply is switched on.

- ▶ Press button ① repeatedly until the desired blower setting has been reached. Depending on the blower setting, up to three indicator lamps will light up. If all indicator lamps are off, the seat ventilation is switched off.

Steering wheel

Adjusting the steering wheel manually

⚠ WARNING Risk of accident due to adjusting the vehicle settings while the vehicle is in motion

You could lose control of the vehicle in the following situations in particular:

- if you adjust the driver's seat, the head restraint, the steering wheel or the mirror while the vehicle is in motion
- if you fasten your seat belt while the vehicle is in motion

▶ Before starting the vehicle: in particular, adjust the driver's seat, head restraint, steering wheel and mirror, and fasten your seat belt.

⚠ WARNING Risk of entrapment for children when adjusting the steering wheel

Children could injure themselves if they adjust the steering wheel.

- ▶ Never leave children unattended in the vehicle.
- ▶ When leaving the vehicle, always take the key with you and lock the vehicle.

Unlocking

- ▶ Fold release lever ① down as far as it will go.

- ▶ Adjust height ② and distance ③ to the steering wheel.

Locking

- ▶ Fold release lever ① up as far as it will go.
- ▶ Check and make sure that the steering column is locked by moving the steering wheel.

Switching the steering wheel heater on/off

Depending on the vehicle version, the steering wheel heater can be switched on/off via a switch on the steering wheel.

Requirements:

- The vehicle is switched on.

- ▶ **To switch on:** push the switch to position ①. If the indicator lamp ③ lights up, the steering wheel heater is switched on.
- ▶ **To switch off:** push the switch to position ②.

When you switch the vehicle off, the steering wheel heater will switch off.

Decoupling the steering wheel heater from the seat heating

Requirements

- The power supply or the vehicle has been switched on.
- The steering wheel heater and the seat heating are linked.

Multimedia system:

→ [Home] ▶▶ Comfort ▶▶ Seat
▶▶ Heating settings

The function is active by default and the steering wheel heater is automatically activated and deactivated when the seat heating is switched on and off.

- ▶ Tap on **Additional steering wheel heater**. The steering wheel heater will be decoupled from the seat heating.

Easy entry and exit feature

Using the easy entry and exit feature

⚠ WARNING Risk of accident when pulling away during the adjustment process of the easy entry and exit feature

You could lose control of the vehicle.

- ▶ Always wait until the adjustment process is complete before driving off.

⚠ WARNING Risk of becoming trapped during adjustment of the easy entry and exit feature

You and other vehicle occupants could become trapped.

- ▶ Ensure that no-one has any body parts in the range of movement of the seat.

If there is a risk of becoming trapped by the driver's seat:

- ▶ Press the seat adjustment switch. The adjustment process will be stopped.

You can stop the adjustment process by pressing one of the memory function position switches.

⚠ WARNING Risk of becoming trapped if children activate the easy entry and exit feature

Children could become trapped if they activate the easy entry and exit feature, particularly when unattended.

- ▶ Never leave children unattended in the vehicle.
- ▶ When leaving the vehicle, always take the key with you and lock the vehicle.

When the easy entry and exit feature is active, the driver's seat will move into an ideal position for getting in or out of the vehicle and the seat backrest will be moved to a more upright position if:

- you switch off the vehicle when the driver's door is open.
- you open the driver's door when the vehicle is switched off.

i The driver's seat will only move forwards or backwards if it is not already in the ideal position for getting in or out of the vehicle. The seat backrest will then move forwards only if it is not already at the front of the backrest adjustment range.

The driver's seat will move back to the last drive position if:

- you switch the vehicle on when the driver's door is closed.
- you close the driver's door when the vehicle is switched on.

The last drive position will be saved when:

- you switch off the vehicle.

- you call up the seat settings via the memory function.
- you save the seat settings via the memory function.

Setting the easy entry and exit feature

Requirements

- The automatic seat adjustment has been activated (→ page 162).
- The power supply or the vehicle has been switched on.

Multimedia system:

➔  ➔ Settings ➔ Vehicle ➔ Comfort ➔ Easy entry and exit feature

▶ Select **Steering wheel and seat, Steering wheel only** or **Off**.

i If you are using a custom user profile, this information will be used for the easy entry and exit feature. This will cause the driver's seat and steering wheel to move into the correct position automatically (→ page 367).

Memory function

Memory function

- ⚠ WARNING** Risk of an accident if the memory function is used while driving

If you use the memory function on the driver's side while driving, you could lose control of the vehicle as a result of the adjustments being made.

- ▶ Only use the memory function on the driver's side when the vehicle is stationary.

- ⚠ WARNING** Risk of entrapment when adjusting the seat with the memory function

When the memory function adjusts the seat, you and other vehicle occupants – particularly children – could become trapped.

- ▶ During the adjustment process of the memory function, make sure that no one

has any body parts in the sweep of the seat.

- ▶ If someone becomes trapped, press a preset position button or seat adjustment switch immediately.

- ⚠ WARNING** Danger of entrapment when memory function is activated by children

When children activate the memory function, they can get trapped, especially if they are unsupervised.

- ▶ Never leave children unattended in the vehicle.
- ▶ When leaving the vehicle, always take the key with you and lock the vehicle.

You can use the memory function when the vehicle is switched off.

Seat adjustments for up to three people can be stored and called up using the memory function.

You can save settings for the following systems:

- Seat
- Seat contour

- Outside mirrors

Operating the memory function

- ⚠ WARNING** Risk of an accident if the memory function is used while driving

If you use the memory function on the driver's side while driving, you could lose control of the vehicle as a result of the adjustments being made.

- ▶ Only use the memory function on the driver's side when the vehicle is stationary.

- ⚠ WARNING** Risk of entrapment when adjusting the seat with the memory function

When the memory function adjusts the seat, you and other vehicle occupants – particularly children – could become trapped.

- ▶ During the adjustment process of the memory function, make sure that no one

has any body parts in the sweep of the seat.

- ▶ If someone becomes trapped, press a preset position button or seat adjustment switch immediately.

⚠ WARNING Danger of entrapment when memory function is activated by children

When children activate the memory function, they can get trapped, especially if they are unsupervised.

- ▶ Never leave children unattended in the vehicle.
- ▶ When leaving the vehicle, always take the key with you and lock the vehicle.

You can use the memory function when the ignition is switched off.

Storing

- ▶ Set the desired position for all systems.
- ▶ Briefly press memory button **M** and then press preset position **1**, **2** or **3** within three seconds.

- ▶ **To call up:** press and briefly hold one of preset position buttons **1**, **2** or **3**. After releasing the button, all systems are moved into the stored position.

Stowage areas

Notes on loading the vehicle

Objects in the deployment area of an airbag may prevent the airbag from functioning correctly. Observe the notes on airbags (→ page 100).

⚠ WARNING Risk of injury from unsecured items in the vehicle

If objects, luggage or loads are not secured or not secured sufficiently, they could slip, tip over or be thrown around and thereby hit vehicle occupants.

There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- ▶ Always stow objects in such a way that they cannot be thrown around.
- ▶ Before the journey, secure objects, luggage or loads against slipping or tipping over.

⚠ WARNING Risk of injury due to objects being stowed incorrectly

If objects in the vehicle interior are stowed incorrectly, they can slide or be thrown around and hit vehicle occupants. In addition, cup holders, open stowage spaces and mobile phone brackets cannot always retain all objects they contain.

There is a risk of injury, particularly in the event of braking manoeuvres or abrupt changes in direction.

- ▶ Always stow objects so that they cannot be thrown around in such situations.
- ▶ Always make sure that objects do not protrude from stowage spaces, luggage nets or stowage nets.
- ▶ Close the lockable stowage spaces before starting a journey.
- ▶ Stow and secure objects that are heavy, hard, pointed, sharp-edged, fragile or too large in the load compartment.

⚠ WARNING Risk of accident due to objects in the driver's and front-passenger footwell

Objects in the driver's and front-passenger footwell may impede pedal travel or block a depressed pedal.

This jeopardises the operating- and road safety of the vehicle.

- ▶ Stow all objects in the vehicle securely so that they cannot get into the driver's or front-passenger footwell.
- ▶ Always ensure that the pedals have sufficient free space.
- ▶ Always fit the floor mats securely and as prescribed.
- ▶ Do not use loose floor mats and do not place floor mats on top of one another.

Vehicles with automatic front passenger airbag deactivation: objects trapped under the front passenger seat may interfere with the function of the automatic front passenger airbag deactivation or damage the system. Therefore please observe

the notes on the function of automatic front passenger airbag deactivation (→ page 91).

⚠ WARNING - Risk of accident or injury when using the cup holder while the vehicle is in motion

The cup holder cannot hold a container secure while the vehicle is in motion.

If you use a cup holder while the vehicle is in motion, the container may be flung around and liquids could be spilled. The vehicle occupants may come into contact with the liquid and if it is hot, they could be scalded. You could be distracted from traffic conditions and you may lose control of the vehicle.

- ▶ Only use the cup holder when the vehicle is stationary.
- ▶ Only use the cup holder for containers of the right size.
- ▶ Always close the container, particularly if the liquid is hot.

! NOTE Damage to the cup holder

The cup holder can be damaged when folding back the rear seat armrest. When open, the cup holder can be damaged by body weight.

- ▶ The rear seat armrest can only be folded back when the cup holder is closed.
- ▶ Do not sit or support yourself on the cup holder when it is open.

! NOTE Damage to the rear armrest due to body weight

When folded out, the rear armrest can be damaged by body weight.

- ▶ Do not sit or support yourself on the rear seat armrest.

! NOTE Damage to the load compartment floor caused by uneven loading or sudden stresses

The load compartment floor can be damaged by unevenly distributed loads or sudden stresses.

▶ Distribute the load evenly.

▶ Drive with due care when the vehicle is carrying a load. Avoid sudden starting, braking and steering manoeuvres or fast cornering.

i Leather is a natural product. It has natural surface properties, such as differences in structure, marks caused by growth and injury or subtle colour differences. These surface characteristics are particular to leather, and not material defects. Leather is also subject to a natural ageing process which changes the surface characteristics.

The driving characteristics of your vehicle are dependent on the distribution of the load within the vehicle. You should bear the following in mind when loading the vehicle:

- Never allow the payload including occupants to exceed the maximum permissible gross mass or the permissible axle loads for the vehicle.

These are shown on the vehicle's model identification plate (→ page 666).

- The load must not protrude above the upper edge of the seat backrests.
- Always use the safety net when carrying objects in the load compartment.
- Always place the load behind unoccupied seats if possible.
- Secure the load using the lashing eyelets and distribute the tension evenly.

Notes on carrying a roof load:

- Distribute the roof load and vehicle load evenly, and place heavy objects at the bottom. Also observe the notes on loading the vehicle.
- Drive with care. Avoid sudden starting, braking and steering manoeuvres or fast cornering.
- When carrying a roof load or when the vehicle is fully loaded or occupied, select driving mode **E** or **C**. These are configured for good stability (→ page 226).

i Further information on stowage compartments and stowage facilities can be found in the Digital Owner's Manual.

Stowage spaces in the vehicle interior

Overview of the front storage compartments

⚠ WARNING Risk of injury due to objects being stowed incorrectly

If objects in the vehicle interior are stowed incorrectly, they can slide or be thrown around and hit vehicle occupants. In addition, cup holders, open stowage spaces and mobile phone receptacles cannot always retain all objects within.

There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- ▶ Always stow objects so that they cannot be thrown around in such situations.
- ▶ Always make sure that objects do not protrude from stowage spaces, luggage nets or stowage nets.
- ▶ Close the lockable stowage spaces before starting a journey.

▶ Always stow and secure heavy, hard, pointed, sharp-edged, fragile or bulky objects in the boot/load compartment.

Observe the notes on loading the vehicle.

- ① Stowage spaces in the doors
- ② Storage compartment in the armrest with a multimedia and USB connection
- ③ Storage compartment in the front centre console with a USB port
- ④ Glove compartment

Locking/unlocking the glove compartment

⚠ WARNING Risk of injury due to objects being stowed incorrectly

If objects in the vehicle interior are stowed incorrectly, they can slide or be thrown around and hit vehicle occupants. In addition, cup holders, open stowage spaces and mobile phone brackets cannot always retain all objects they contain.

There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- ▶ Always stow objects in such a way that they cannot be thrown around in such situations.
- ▶ Always make sure that objects do not protrude from stowage spaces, luggage nets or stowage nets.
- ▶ Close the lockable stowage spaces before starting a journey.

- ▶ Always stow and secure heavy, hard, pointed, sharp-edged, fragile or bulky objects in the boot.

Observe the notes on loading the vehicle.

- ▶ Turn the emergency key a quarter turn clockwise **2** (to lock) or anti-clockwise **1** (to unlock).

Through-loading feature in the rear bench seat (EASY-PACK Quickfold)

Folding the rear seat backrest forwards

⚠ WARNING Risk of becoming trapped when adjusting the seats

When you adjust a seat, you may trap yourself or a vehicle occupant.

- ▶ When adjusting a seat, make sure that no one has any body parts in the sweep of the seat.

⚠ WARNING Risk of accident if the rear bench seat, rear seat and seat backrest are not engaged

The rear bench seat, rear seat and seat backrest may fold forwards, even while the vehicle is in motion.

- As a result, the vehicle occupant will be pressed into the seat belt with increased force. The seat belt will not be able to pro-

ject as intended and could cause additional injury.

- Objects or loads in the boot or load compartment cannot be restrained by the seat backrest.

- ▶ Make sure that the rear bench seat, the rear seat and the seat backrest are engaged before every trip.

If the seat backrests are not engaged and locked in place, the lock verification indicator will be red.

Always ensure that all vehicle occupants have their seat belts fastened correctly and are sitting properly. Particular attention must be paid to children.

If you no longer require the folded-down seat backrest as a loading area, fold the backrest back into place.

Requirements

- The area into which the seat backrest is folded is clear.
- To fold the centre seat backrest forwards: the centre seat backrest has been unlocked.

- The armrest on the second row of seats is folded back and the cup holders are empty.

Folding the left and right seat backrests forwards

You can fold the centre and outer seat backrests forwards.

- ▶ Move the driver's or front passenger seat forwards, if necessary.

- ▶ If necessary, fully insert the seat backrest head restraints (→ page 160).

- ▶ Pull release lever ①.

Folding the centre seat backrest forwards

- ▶ Pull release catch ③ for seat backrest ② forwards.

- ▶ Fold the corresponding seat backrest forwards.

Folding back the rear seat backrest

⚠ WARNING Risk of becoming trapped when adjusting the seats

When you adjust a seat, you may trap yourself or a vehicle occupant.

▶ When adjusting a seat, make sure that no one has any body parts in the sweep of the seat.

⚠ WARNING Risk of accident if the rear bench seat, rear seat and seat backrest are not engaged

The rear bench seat, rear seat and seat backrest may fold forwards, even while the vehicle is in motion.

- As a result, the vehicle occupant will be pressed into the seat belt with increased force. The seat belt will not be able to protect as intended and could cause additional injury.

- Objects or loads in the boot or load compartment cannot be restrained by the seat backrest.

▶ Make sure that the rear bench seat, the rear seat and the seat backrest are engaged before every trip.

If the seat backrests are not engaged and locked in place, the red lock verification indicator will be visible.

! NOTE Damage caused by trapping the seat belt when folding back the seat backrest

The seat belt could become trapped and thus be damaged when the seat backrest is folded back.

▶ Make sure that the seat belt is not trapped when folding back the seat backrest.

▶ Move the driver's or front passenger seat forwards, if necessary.

▶ Fold corresponding seat backrest ① back until it engages.

Left and right seat backrests: if the seat backrest is not engaged and locked in place, red lock verification indicator ② will be visible.

Centre seat backrest: if the seat backrest is not engaged and locked in place, red lock verification indicator ③ will be visible.

Locking the release catch of the centre rear seat backrest

⚠ WARNING Risk of accident if the rear bench seat, rear seat and seat backrest are not engaged

The rear bench seat, rear seat and seat backrest may fold forwards, even while the vehicle is in motion.

- As a result, the vehicle occupant will be pressed into the seat belt with increased force. The seat belt will not be able to protect as intended and could cause additional injury.
- Objects or loads in the boot or load compartment cannot be restrained by the seat backrest.

▶ Make sure that the rear bench seat, the rear seat and the seat backrest are engaged before every trip.

If the seat backrests are not engaged and locked in place, the lock verification indicator will be red.

Requirements

- The left and centre seat backrests are engaged and joined together.

You can lock the centre seat backrest. The centre seat backrest can then be folded forwards only together with the left seat backrest.

▶ Fold the centre and left seat backrests forwards.

▶ **To lock or unlock:** slide catch ① upwards or downwards.

Load compartment cover

Installing and removing the load compartment cover

⚠ WARNING Risk of injury or death due to poorly secured objects

The load compartment cover alone cannot secure or restrain heavy objects, items of luggage or heavy loads.

You could be hit by an unsecured load, particularly in the event of abrupt changes in direction, sudden braking or an accident.

- ▶ Always stow objects in such a way that they cannot be thrown around.
- ▶ Secure objects, luggage or loads against slipping or tipping over, e.g. by using lashing material, even if you are using the load compartment cover.

Requirements

- Do not load the load compartment cover with more than 2.5 kg.

Removing

- i** Please note that the load compartment cover must not be pushed further upwards when the tailgate is open.

- Pull hanger **3** on the tailgate upwards out of eyelet **1** and unhook it.
- Swivel the load compartment cover downwards and pull it out on the left and right in the direction of arrow **4**.

Fitting

- Hang up the load compartment cover on the left and right.
- Push the load compartment cover forwards evenly with both hands on the left and right until it engages.
- Swivel the load compartment cover upwards and hook hanger **3** through eyelet **2**.
- Pull hanger **3** downwards into eyelet **1** until it engages.

Attaching/removing the partitioning net

⚠ WARNING Risk of injury or death due to poorly secured objects

The partitioning net alone cannot secure or restrain heavy objects, items of luggage or heavy loads.

You could be hit by an unsecured load, particularly in the event of abrupt changes in direction, sudden braking or an accident.

- Always stow objects in such a way that they cannot be thrown around.
- Secure objects, luggage or loads against slipping or tipping over, e.g. by using lashing material, even if you are using the partitioning net.

For safety reasons, always use a partitioning net when transporting a load.

Damaged partitioning nets can no longer fulfil their functions and must be replaced. Visit a qualified specialist workshop.

Attaching

Partitioning net without load compartment enlargement

Partitioning net with load compartment enlargement

- ▶ Hook partition net ① into holders ② on the left and right on the roof lining.
- ▶ Without load compartment enlargement: attach hooks ③ to tie-down eyes ④ on the left and right in such a way that hooks ③ point backwards.

- ▶ With load compartment enlargement: attach hooks ③ to tie-down eyes ④ on the left and right in such a way that hooks ③ point to the door.
- ▶ Pull on the loose ends of the lashing straps at the same time until the partitioning net ① is tight and the top edge of partitioning net ① is horizontal.

Removing

- ▶ Turn the buckle of the lashing strap in the direction of arrow ⑥.
- ▶ Slide the loose end of lashing strap into the buckle in the direction of arrow ⑤ until the lashing straps are loose.
- ▶ Remove hooks ③ from tie-down eyes ④ on the left and right.

- ▶ Remove partitioning net ① from brackets ② on the roof lining on the left and right.

Overview of tie-down eyes

Observe the notes on loading the vehicle (→ page 170).

- ① Tie-down eyes (vehicles with through-loading feature in the rear bench seat)

Overview of bag hooks

⚠ WARNING Risk of injury when using bag hooks with heavy objects

The bag hooks cannot restrain heavy objects or items of luggage.

Objects or items of luggage may be flung around and hit vehicle occupants.

- ▶ Only hang light objects on the bag hooks.
- ▶ Never hang hard, sharp-edged or fragile objects on the bag hooks.

Observe the notes on loading the vehicle (→ page 170).

Subject the bag hooks to a maximum load of 3 kg and do not attach any goods to them.

① Bag hook

Overview of clothes hooks on the tailgate

Observe the notes on loading the vehicle (→ page 170).

① Clothes hook

The clothes hooks are not suitable for hanging heavy objects as this can cause the tailgate to lower automatically. Use the clothes hooks only for light objects such as jackets.

Opening or closing the stowage space under the load compartment floor

⚠ WARNING Risk of injury due to an open load compartment floor

If you drive with the load compartment floor open, objects could be flung around and hit vehicle occupants as a result. There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

▶ Always close the load compartment floor before a journey.

Opening

- ▶ Pull handle ① upwards.
- ▶ Lift the load compartment floor up using handle ①.

Closing

- ▶ Fold the load compartment floor down and then press handle ① down until it engages.

Attaching a roof luggage rack

⚠ WARNING Risk of accident due to exceeding the maximum roof load

The vehicle centre of gravity and the usual driving characteristics as well as the steering and braking characteristics alter.

If you exceed the maximum roof load, the driving characteristics, as well as steering and braking, will be greatly impaired.

- ▶ Never exceed the maximum roof load and adjust your driving style.

You will find information on the maximum roof load in the "Technical data" section.

! NOTE Vehicle damage due to failure to observe the maximum permissible clearance height

If the vehicle height exceeds the maximum permissible clearance height, the roof and other vehicle parts may be damaged.

- ▶ Please observe the indicated maximum clearance height.
- ▶ If the vehicle exceeds the permissible clearance height, do not drive in.
- ▶ Take the modified vehicle height in the case of roof superstructures or other carrier systems into account.

! NOTE Damage to the panorama sliding sunroof due to non-approved roof luggage racks

The panorama sliding sunroof may be damaged by the roof luggage rack if you attempt to open it when using a roof luggage rack not tested and approved for Mercedes-Benz.

- ▶ When a roof luggage rack is fitted, open the panorama sliding sunroof only if this has been tested and approved for Mercedes-Benz.

The panorama sliding sunroof may be raised to allow ventilation of the vehicle interior.

Notes on driving with roof load

- Distribute the roof load and vehicle load evenly, and place heavy objects at the bottom. Also observe the notes on loading the vehicle (→ page 170) .
 - Drive carefully, avoiding abrupt starting, braking and steering as well as fast cornering.
 - When transporting a roof load and with a fully laden or fully occupied vehicle, select one of the drive programs **E** and **C**. These are configured for good stability (→ page 226).
- ▶ Secure the roof luggage rack to the roof railing.
 - ▶ Observe the manufacturer's installation instructions.

Cup holders

Fitting the cup holder in or removing it from the centre console

⚠ WARNING - Risk of accident or injury when using the cup holder while the vehicle is in motion

The cup holder cannot hold a container secure while the vehicle is in motion.

If you use a cup holder while the vehicle is in motion, the container may be flung around and liquids could be spilled. The vehicle occupants may come into contact with the liquid and if it is hot, they could be scalded. You could be distracted from traffic conditions and you may lose control of the vehicle.

- ▶ Only use the cup holder when the vehicle is stationary.
- ▶ Only use the cup holder for containers of the right size.
- ▶ Always close the container, particularly if the liquid is hot.

Cup holder in the stowage compartment with cover

Cup holder in the stowage compartment without cover

- ▶ **To remove:** slide snap-in brackets ① of the cup holder inwards until they are unlocked.
- ▶ Pull the cup holder up and out of the stowage compartment.

ⓘ The cup holder and the rubber mat beneath it can be removed for cleaning, e.g. with clean, lukewarm water.

Cup holder in the stowage compartment with cover

Cup holder in the stowage compartment without cover

- ▶ **To fit:** if necessary, open the stowage compartment cover and insert the cup holder, as shown, into the stowage compartment with the label facing the vehicle interior.
- ▶ Slide the cup holder onto the bars in the stowage compartment.

- ▶ Slide snap-in brackets ① outwards until they engage.
 - ▶ Cup holder in the stowage compartment with cover: press button ②.
 - ▶ Cup holder in the stowage compartment without cover: press button ② and/or ④. Wings ③ will fold upwards.
- ① The cup holder wings can be folded downwards and locked. The cup holder's holding function will then not be available.

Opening or closing the cup holders in the rear armrest

⚠ WARNING - Risk of accident or injury when using the cup holder while the vehicle is in motion

The cup holder cannot hold a container secure while the vehicle is in motion.

If you use a cup holder while the vehicle is in motion, the container may be flung around and liquids could be spilled. The vehicle occu-

pants may come into contact with the liquid and if it is hot, they could be scalded. You could be distracted from traffic conditions and you may lose control of the vehicle.

- ▶ Only use the cup holder when the vehicle is stationary.
- ▶ Only use the cup holder for containers of the right size.
- ▶ Always close the container, particularly if the liquid is hot.

⚠ NOTE Damage to the rear armrest due to body weight

When folded out, the rear armrest can be damaged by body weight.

- ▶ Do not sit or support yourself on the rear seat armrest.

⚠ NOTE Damage to the cup holder

The cup holder can be damaged when folding back the rear seat armrest. When open, the cup holder can be damaged by body weight.

- ▶ The rear seat armrest can only be folded back when the cup holder is closed.
- ▶ Do not sit or support yourself on the cup holder when it is open.

① Depending on its equipment, your vehicle will have a rear armrest with a cup holder.

- ▶ **To open:** press cup holder ① or ②. Cup holder ① or ② will extend automatically.
- ▶ **To close:** push cup holder ① or ② back until it engages.

Ashtray and cigarette lighter

Using the ashtray

During a journey

- ▶ Place the closed ashtray in the front door stowage compartment.
- ▶ Check that it is secure.
- ▶ Comply with the notes on loading the vehicle (→ page 170).

▶ **To open:** fold lid ① upwards.

① **i** Twist the top part of the ashtray to remove it for cleaning, e.g. with clean, lukewarm water, or for emptying.

Using the cigarette lighter

⚠ WARNING Risk of fire and injury from hot cigarette lighter

You can suffer burns if you touch the hot heating element or the hot socket of the cigarette lighter.

In addition, flammable materials can catch fire if:

- you drop the hot cigarette lighter.
- children e.g. hold the hot cigarette lighter to objects.

- ▶ Always hold the cigarette lighter by the knob.
- ▶ Always make sure that the cigarette lighter is out of the reach of children.
- ▶ Never leave children unattended in the vehicle.

Requirements

- The vehicle is switched on.

- ▶ Press in cigarette lighter ①.
The cigarette lighter will pop out automatically when the heating element is red-hot.

Sockets

Using the 12 V socket

Requirements

- Only devices up to a maximum of 180 W (15 A) are permissible.

Depending on the vehicle equipment, the vehicle has the following 12 V sockets:

- In the stowage compartment in the front centre console
- In the load compartment

Example: 12 V socket in the stowage compartment in the front centre console

- ▶ Fold up socket cap ①.
- ▶ Insert the plug of the device.

12 V socket in the stowage compartment with cover: if you have connected a device to the 12 V

socket, leave the cover of the stowage compartment open.

Using the 115 V socket in the rear passenger compartment

⚠ DANGER Risk of fatal injuries due to a damaged connecting cable or a damaged socket

You could receive an electric shock if the connecting cable or the 115 V power socket is pulled out of the trim or is damaged or wet.

- ▶ Use only connecting cables that are dry and free of damage.
- ▶ When the vehicle is switched off, make sure that the 115 V power socket is dry.
- ▶ Immediately have the 115 V power socket checked or replaced at a qualified specialised workshop if it is damaged or has been pulled out of the trim.
- ▶ Never plug the connecting cable into a 115 V power socket that is damaged or has been pulled out of the trim.

⚠ DANGER Risk of death due to using the socket incorrectly

In particular, you could receive an electric shock:

- if you touch the inside of the socket
- if you insert unsuitable devices or objects into the socket

- ▶ Do not touch the inside of the socket.
- ▶ Only connect suitable devices to the socket.

Make sure that no liquids get into the 115 V socket.

When the 115 V socket is not in use, keep the socket flap closed.

Requirements

- The device is equipped with a suitable plug which conforms to the standards specific to the country you are in.
- A device up to a maximum of 150 W (1.3 A) is used.
- Do not use multiple socket outlets.

- ▶ Open socket flap ③.
 - ▶ Insert the plug of the device into 115 V socket ①.
- When the on-board electrical system voltage is sufficient, indicator lamp ② lights up.

USB port in the rear passenger compartment

- ① Depending on the vehicle equipment, the design of the stowage compartment and the number of USB ports in the rear centre console may vary.

When the vehicle is switched on, you can charge a USB device, such as a mobile phone, at USB port ① using a suitable charging cable.

Wireless charging of the mobile phone and connection with the exterior aerial

Notes on wirelessly charging a mobile phone

⚠ WARNING Risk of injury due to objects being stowed incorrectly

If objects in the vehicle interior are stowed incorrectly, they can slide or be thrown around and hit vehicle occupants. In addition, cup holders, open stowage spaces and mobile phone receptacles cannot always retain all objects within.

There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- ▶ Always stow objects so that they cannot be thrown around in such situations.
- ▶ Always make sure that objects do not protrude from stowage spaces, luggage nets or stowage nets.
- ▶ Close the lockable stowage spaces before starting a journey.

- ▶ Always stow and secure heavy, hard, pointed, sharp-edged, fragile or bulky objects in the boot/load compartment.

Observe the notes on loading the vehicle.

⚠ WARNING Risk of fire from placing objects in the mobile phone stowage compartment

Placing other objects in the mobile phone stowage compartment could constitute a fire hazard.

- ▶ Apart from a mobile phone, do not place any other objects in the mobile phone stowage compartment, especially those made of metal.

! NOTE Damage to objects caused by placing them in the mobile phone stowage compartment

If objects are placed in the mobile phone stowage compartment, these may be damaged by electromagnetic fields.

- ▶ Do not place credit cards, storage media, ski passes or other objects sensitive to electromagnetic fields in the mobile phone stowage compartment.

! NOTE Damage to the mobile phone stowage compartment caused by liquids

If liquids enter the mobile phone stowage compartment, the compartment may be damaged.

- ▶ Ensure that no liquids enter the mobile phone stowage compartment.

Observe the following notes on wirelessly charging a mobile phone:

- Depending on the vehicle equipment, the mobile phone is connected to the vehicle's exterior aerial via the charging module.
- The charging function and wireless connection of the mobile phone to the vehicle's exterior aerial are only available if the vehicle is switched on.

- Small mobile phones may not be able to be charged in every position of the mobile phone stowage compartment.
- Large mobile phones which do not rest flat in the mobile phone stowage compartment may not be able to be charged or connected with the vehicle's exterior aerial.
- The mobile phone may heat up during the charging process. This may in particular be dependent on the currently open applications (apps), which are open in the background.
- To ensure more efficient charging and connection with the vehicle's exterior aerial, remove the protective cover from the mobile phone. Protective covers which are required for wireless charging are excluded.

Charging a mobile phone wirelessly

⚠ WARNING Risk of injury due to objects being stowed incorrectly

If objects in the vehicle interior are stowed incorrectly, they can slide or be thrown around

and hit vehicle occupants. In addition, cup holders, open stowage spaces and mobile phone receptacles cannot always retain all objects within.

There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- ▶ Always stow objects so that they cannot be thrown around in such situations.
- ▶ Always make sure that objects do not protrude from stowage spaces, luggage nets or stowage nets.
- ▶ Close the lockable stowage spaces before starting a journey.
- ▶ Always stow and secure heavy, hard, pointed, sharp-edged, fragile or bulky objects in the boot/load compartment.

Observe the notes on loading the vehicle.

Requirements

- The mobile phone is suitable for wireless charging.

A list of compatible mobile phones can be found at: <https://www.mercedes-benz-mobile.com>.

- ▶ Place the mobile phone as close to the centre of the marked surface on mat ① as possible with the display facing upwards. When a message is shown in the multimedia system, the mobile phone is being charged. Malfunctions during the charging process are shown in the central display.
- ① The mat can be removed for cleaning, e.g. using clean, lukewarm water.

Stowage compartment without cover

Make sure the mobile phone is properly stored and secured to prevent it from falling out while you are driving.

- ▶ **To secure the mobile phone:** swing lever ② out.

Radio equipment approval numbers for Brazil

This device operates on a secondary basis, that is to say it has no protection against harmful interference, not even from the same type of stations, and must not cause interference with systems operating on a primary basis.

This product is permitted in accordance with the procedure defined in Directive 242/2000 by the

Brazilian telecommunications agency ANATEL and meets the applicable technical requirements.

Further information is available on the ANATEL website. www.anatel.gov.br

- ▶ For further information on the declaration of conformity for vehicle components which receive and/or transmit radio waves see (→ page 71).

Fitting/removing the floor mats

⚠ WARNING Risk of accident due to objects in the driver's footwell

Objects in the driver's footwell may impede pedal travel or block a depressed pedal.

This jeopardises the operating and road safety of the vehicle.

- ▶ Stow all objects in the vehicle securely so that they cannot get into the driver's footwell.

- ▶ Always fit the floor mats securely and as prescribed in order to ensure that there is always sufficient room for the pedals.
- ▶ Do not use loose floor mats and do not place floor mats on top of one another.

- ▶ **To fit:** slide the corresponding seat backwards and lay the floor mat in the footwell.

- ▶ Press studs ① onto holders ②.
- ▶ Adjust the corresponding seat.
- ▶ **To remove:** slide the corresponding seat backwards and pull the floor mat off holders ②.
- ▶ Remove the floor mat.

Exterior lighting

Notes on adjusting the lights when driving abroad

It is not necessary to adjust the headlamps. The legal requirements are also met in countries in which traffic drives on the other side of the road.

Information about lighting systems and your responsibility

The various lighting systems of the vehicle are only aids. The driver of the vehicle is responsible for correct vehicle illumination in accordance with the prevailing light and visibility conditions, legal requirements and traffic situation.

Light switch

Operating the light switch

- 1 Left-hand parking lights
- 2 Right-hand parking lights
- 3 Standing lights and licence plate lighting

- 4 Automatic driving lights (preferred light switch position)
- 5 Low beam/high beam
- 6 Activates or deactivates the rear fog light.

When low beam is activated, the indicator lamp for the standing lights will be deactivated and replaced by the low-beam indicator lamp.

▶ Always park your vehicle safely using sufficient lighting, in accordance with the relevant legal stipulations.

! **NOTE** Battery discharging by operating the standing lights

Do not have the standing lights switched on over a period of several hours.

For vehicles that are wider than 2 m or longer than 6 m, single-sided parking lighting is not permitted in some countries. In this case, the standing lights are also switched on in the parking lights position.

If the battery is insufficiently charged, the standing lights or parking lights will be switched off automatically to facilitate the next drive system start.

The exterior lighting (except standing and parking lights) will switch off automatically when the driver's door is opened.

- Observe the notes on locator lighting (→ page 196).

Automatic driving lights function

When the vehicle is switched on, the standing lights, low beam and daytime running lights will be switched on automatically depending on the light conditions.

⚠ WARNING Risk of accident when the dipped beam is switched off in poor visibility

When the light switch is set to **AUTO**, the dipped beam may not be switched on automatically if there is fog, snow or other causes of poor visibility such as spray.

▶ In such cases, turn the light switch to .

The automatic driving lights are only an aid. You are responsible for the vehicle lighting.

Switching the rear fog light on/off

Requirements

- The light switch is in the  or **AUTO** position.

▶ Press button .

Please observe the country-specific laws on the use of rear fog lamps.

Operating the combination switch for the lights

- 1 High beam
- 2 Turn signal light, right
- 3 Headlamp flashing
- 4 Turn signal light, left

▶ Use the combination switch to select the desired function.

Switching on high beam

- ▶ Turn the light switch to the  or **AUTO** position.
- ▶ Push the combination switch in the direction of arrow ①.
When high beam is activated, the indicator lamp for low beam  will be deactivated and replaced by the indicator lamp for high beam .

Switching off high beam

- ▶ Push the combination switch in the direction of arrow ① or pull it in the direction of arrow ③.

Headlamp flashing

- ▶ Pull the combination switch in the direction of arrow ③.

Turn signal light

- ▶ **To indicate briefly:** push the combination switch briefly to the point of resistance in the direction of arrow ② or ④.
The corresponding turn signal light will flash three times.
- ▶ **To indicate permanently:** push the combination switch beyond the point of resistance in the direction of arrow ② or ④.

Activating/deactivating the hazard warning lights

- ▶ Press button ①.

The hazard warning lights will switch on automatically if:

- the airbag has been deployed.
- the vehicle is braked heavily from a speed of more than 70 km/h to a standstill.

When you pull away again, the hazard warning light system will switch off automatically at approximately 10 km/h. You can also switch off the hazard warning light system using button ①.

Adaptive Highbeam Assist

Adaptive Highbeam Assist function

⚠ WARNING Risk of accident despite Adaptive Highbeam Assist

Adaptive Highbeam Assist does not react to:

- road users without lights, e.g. pedestrians
- road users with poor lighting, e.g. cyclists
- road users whose lighting is obstructed, e.g. by a barrier

On very rare occasions, Adaptive Highbeam Assist may fail to recognise other road users with their own lighting, or may recognise them too late.

In these, or in similar situations, the automatic high beam will not be deactivated or will be

activated despite the presence of other road users.

▶ Always observe the road and traffic conditions carefully and switch off the high beam in good time.

Adaptive Highbeam Assist cannot take into account road, weather or traffic conditions.

Detection may be restricted in the following cases:

- in poor visibility, e.g. fog, heavy rain or snow
- if there is dirt on the sensors or the sensors are obscured

Adaptive Highbeam Assist is only an aid. You are responsible for adjusting the vehicle's lighting to the prevailing light, visibility and traffic conditions.

① Adaptive Highbeam Assist is an on-demand feature (→ page 67).

Adaptive Highbeam Assist automatically switches between the following types of light:

- Low beam
- High beam

At speeds greater than 30 km/h:

- If no other road users are detected, high beam will switch on automatically.

High beam will switch off automatically in the following cases:

- At speeds below 25 km/h
- If other road users are detected
- If street lighting is sufficient

 The system's optical sensor is located behind the windscreen near the overhead control panel.

Switching Adaptive Highbeam Assist on/off

 **WARNING** Risk of accident despite Adaptive Highbeam Assist

Adaptive Highbeam Assist does not react to:

- road users without lights, e.g. pedestrians
- road users with poor lighting, e.g. cyclists
- road users whose lighting is obstructed, e.g. by a barrier

On very rare occasions, Adaptive Highbeam Assist may fail to recognise other road users with their own lighting, or may recognise them too late.

In these, or in similar situations, the automatic high beam will not be deactivated or will be activated despite the presence of other road users.

- ▶ Always observe the road and traffic conditions carefully and switch off the high beam in good time.

Switching on

- ▶ Turn the light switch to the **AUTO** position.
- ▶ Switch on high beam using the combination switch.
If Adaptive Highbeam Assist is activated, the  indicator lamp will light up on the driver's display.

Switching off

- ▶ Switch off high beam using the combination switch.

Setting the exterior lighting switch-off delay time

Multimedia system:

- ▶  **Settings** ▶ **Lights**
- ▶ **Interior/exterior lighting**
- ▶ **Exterior lighting display**

- ▶ Set a switch-off delay time.
When the vehicle's engine is switched off, the exterior lighting will be activated for the set time.

Activating/deactivating locator lighting

Multimedia system:

- ▶  **Settings** ▶ **Lights**
- ▶ **Interior/exterior lighting**

- ▶ Activate or deactivate **Locator lighting**.

When the function is activated, the exterior lighting will light up for 40 seconds after the vehicle is unlocked or the driver's door is opened when the vehicle is parked and not locked. When you start the vehicle, the locator lighting is switched off and automatic driving lights are activated.

Interior lighting

Adjusting the interior lighting

Front overhead control panel

- ① Front left reading lamp
- ② Automatic interior lighting control
- ③ Front interior lighting
- ④ Rear interior lighting
- ⑤ Front right reading lamp

▶ **To switch on or off:** press button ① - ⑤ accordingly.

Operating unit inside the grab handle (rear)

- ① Rear reading lamp

▶ **To switch on or off:** press the ① button.

Adjusting the ambient lighting

Multimedia system:

➔ ➔ **Comfort** ➔ **Ambient light**

Setting the colour

- ▶ Select **Colour**.
- ▶ Select **Monochrome** or **Multi-colour**.
- ▶ Set the desired colour or colour scheme.

Adjusting the brightness

- ▶ Select **Brightness**.
- ▶ Adjust the brightness.
- ① Depending on the ambient light conditions, the ambient lighting will automatically switch between day and night modes.

Activating the brightness for zones

- ▶ Select **Brightness**.
- ▶ Switch off **Link zones** .
The **Direct**, **Indirect** and **Accents** zones can be set separately.

Activating effects

- ▶ Select **Effects**.
- ▶ Activate the desired effect.
- ① Different effects will be available depending on the vehicle equipment.

Multi-colour animation

- The chosen colour combination will change at predefined intervals.

Climate

- If changes are made to the temperature setting in the vehicle, the colour of the ambient lighting will change briefly.

Greeting

- When you get into the vehicle, a special colour animation will play.

Charging animation

- The ambient lighting provides visual feedback on the different states of charge when the vehicle is connected to or disconnected from the charging station.

Switching the interior lighting switch-off delay time on/off

Multimedia system:

-  ➤ Settings ➤ Lights
- Interior/external lighting
- Interior lighting display

- ▶ Activate or deactivate **Interior lighting display**. If this function is active, the interior lighting will be switched on for a short time after the end of the journey.

Windscreen wipers and windscreen washer system

Switching the windscreen wipers on/off

- 1** **0** Windscreen wipers off
- 2** **...** Automatic wiping, normal
- 3** **....** Automatic wiping, frequent

4  Continuous wiping, slow

5  Continuous wiping, fast

▶ Turn the combination switch to the corresponding position 1 - 5.

▶  **Single wipe:** press button ① as far as the point of resistance.

▶  **Wiping with washer fluid:** press button ① beyond the point of resistance.

① Observe the notes on washing the vehicle in a car wash (→ page 22).

Switching the rear window wiper on/off

①  Single wipe/washing

②  Intermittent wiping

▶ **Single wipe:** press button ① as far as the point of resistance.

▶ **Wiping with washer fluid:** press button ① beyond the point of resistance.

▶ **Switching intermittent wiping on/off:** press button ②.
The  symbol will appear on the driver's display when the rear window wiper is switched on.

Replacing the windscreen wiper blades

⚠ WARNING Risk of becoming trapped if the windscreen wipers are switched on while wiper blades are being replaced

If the windscreen wipers begin to move while you are changing the wiper blades, you can be trapped by the wiper arm.

▶ Always switch off the windscreen wipers and vehicle before changing the wiper blades.

Moving the wiper arms into the replacement position

▶ Switch the vehicle on and then off again immediately.

- ▶ Within around 15 seconds, press and hold the  button on the combination switch for approximately three seconds (→ page 198). The wiper arms will move into the replacement position.
- ⓘ Check the condition of the wiper blades regularly and replace them in the event of visible damage or ongoing smearing.
- ▶ Observe the information about the service indicator.

Service indicator

- ▶ Remove protective film  from the service indicators on the tips of the newly fitted wiper blades.

When the colour of the service indicators changes from black to yellow, replace the wiper blades.

- ⓘ The time until the colour changes varies depending on the usage conditions.

Replacing the rear window wiper blade

⚠ WARNING Risk of becoming trapped if the windscreen wipers are switched on while wiper blades are being replaced

If the windscreen wipers begin to move while you are changing the wiper blades, you can be trapped by the wiper arm.

- ▶ Always switch off the windscreen wipers and vehicle before changing the wiper blades.

Removing the wiper blade

- ▶ Switch off the vehicle.
- ▶ Fold wiper arm ② away from the rear window until it engages in the replacement position.
- ▶ Unclip wiper blade ① from wiper arm ② and remove it in the direction of arrow ③.

Fitting the wiper blade

- ▶ Position wiper blade ① with both tabs ③ on holder ② on the wiper arm.
- ▶ Push wiper blade ① in the direction of arrow ④ until it engages in holder ②.
- ▶ Make sure that wiper blade ① is seated correctly.

- ▶ Fold the wiper arm from the replacement position back onto the rear window.

Mirrors

Operating the outside mirrors

- ⚠ **WARNING** Risk of injury due to adjusting vehicle settings while the vehicle is in motion

You could lose control of the vehicle in the following situations in particular:

- If you adjust the driver's seat, the head restraints, the steering wheel or the mirror while the vehicle is in motion.
 - If you fasten your seat belt while the vehicle is in motion.
- ▶ Before starting the drive system: adjust the driver's seat, the head restraints, the steering wheel and the mirror and fasten your seat belt.

⚠ WARNING Risk of accident due to misjudgement of distance when using the outside mirror

The outside mirrors reflect objects on a smaller scale. The objects in view are in fact closer than they appear.

▶ Therefore, always look over your shoulder in order to ensure that you are aware of the actual distance between you and the road users driving behind you.

- ▶ **To fold in or out:** briefly press button ②.
 - ▶ **To adjust:** use button ① or ③ to select the outside mirror to be adjusted.
 - ▶ Use button ④ to adjust the position of the mirror glass.
- ⓘ If the battery has been disconnected or completely discharged, you will have to reset the

outside mirrors. Only then will the automatic mirror folding function work properly.

▶ **To reset:** briefly press button ②.
An outside mirror that has been pushed out of position can be engaged in position again as follows:

- ▶ **Vehicles without electrically folding outside mirrors:** manually move the outside mirror into the correct position.
- ▶ **Vehicles with electrically folding outside mirrors:** press and hold button ②. You will hear a click. The outside mirror will now be set to the correct position.

Automatic anti-dazzle mirrors function

⚠ WARNING Risk of acid burns and poisoning due to the anti-dazzle mirror electrolyte

Electrolyte may escape if the glass in an automatic anti-dazzle mirror breaks.

The electrolyte is hazardous to health and causes irritation. It must not come into contact with your skin, eyes, respiratory organs or clothing or be swallowed.

- ▶ If you come into contact with electrolyte, observe the following:
- Immediately rinse the electrolyte from your skin with water and seek medical attention.
 - If electrolyte comes into contact with your eyes, immediately rinse them thoroughly with clean water and seek medical attention.
 - If the electrolyte is swallowed, immediately rinse your mouth out thoroughly. Do not induce vomiting. Seek medical attention immediately.
 - Immediately change out of clothing which has been contaminated with electrolyte.
 - If an allergic reaction occurs, seek medical attention immediately.

When light from a headlamp hits the sensor on the inside rearview mirror, the inside rearview mirror automatically dims.

System limits

The system will not go into anti-dazzle mode if:

- The drive system is switched off.
- Reverse gear is engaged
- The interior lighting is switched on.

Front-passenger outside mirror parking position function

The parking position makes parking easier.

The front-passenger outside mirror will swivel downwards in the direction of the rear wheel on the front passenger's side when:

- the parking position is stored (→ page 204).
- the front-passenger mirror is selected.
- reverse gear is engaged.

The front-passenger outside mirror will move back to its original position when:

- you shift the transmission to another transmission position.
- you are travelling at a speed greater than 15 km/h.
- you press the button for the outside mirror on the driver's side.

Storing the parking position of the front-passenger outside mirror using reverse gear

Storing

- ▶ Press button ① to select the front-passenger outside mirror.
- ▶ Engage reverse gear.

- ▶ Move the front-passenger outside mirror into the desired parking position using button ②.

Calling up

- ① Selects the front-passenger outside mirror
- ② Adjusts the mirrors
- ▶ Press button ① to select the front-passenger outside mirror.

- ▶ Engage reverse gear.
The front-passenger outside mirror will move into the stored parking position.

Activating/deactivating the automatic mirror folding function

Multimedia system:

→  Settings ▶ Vehicle

▶ Open/close

- ▶ Activate or deactivate **Automatic mirror fold-in**.

Overview of climate control systems

Notes on climate control

For the air-conditioning system, pollution level monitoring and air filtration to function correctly, an interior air filter must always be used. Make sure that the filter is installed correctly. Use filters recommended and approved by Mercedes-Benz. Always have maintenance work carried out at a qualified specialist workshop.

Overview of the air-conditioning control panel

Vehicles with the THERMATIC air conditioning control panel:

- 1 Sets the temperature
- 2 Calls up the air conditioning menu
- 3 Sets the airflow or switches off climate control
- 4 **AUTO** Sets climate control to automatic mode (→ page 206)
- 5 Demists the windscreen
- 6 Switches the rear window heater on/off
- 7 Switches air-recirculation mode on/off (→ page 208)
- 8 **A/C** Switches the A/C function on/off (→ page 206)

- 9 Activates/deactivates "Immediate pre-entry climate control" (→ page 211)
- 10 Sets the air distribution

Vehicles with the THERMOTRONIC air conditioning control panel:

- 1 Sets the temperature on the driver's side
- 2 Calls up the air conditioning menu
- 3 Sets the airflow or switches off climate control
- 4 **AUTO** Sets climate control to automatic mode (→ page 206)
- 5 Demists the windscreen

- 6  Switches the rear window heater on/off
- 7  Switches air-recirculation mode on/off (→ page 208)
- 8  Switches the A/C function on/off (→ page 206)
- 9  Activates/deactivates "Immediate pre-entry climate control" (→ page 211)
- 10  Sets the temperature on the front passenger side

Operating the climate control system

Switching climate control on/off

- ▶ **To switch on:** set the airflow to level 1 or higher using the  button.
- ▶ **To switch off:** set the airflow to level 0 using the  button.
- i If climate control is switched off, the windows may mist up more quickly. Switch off climate control only briefly.

Switching the A/C function on/off using the air conditioning control panel

The A/C function heats, cools and dehumidifies the vehicle's interior air.

- ▶ Press the  button.

Switch off the A/C function only briefly; otherwise, the windows may mist up more quickly.

Condensation may drip from the underside of the vehicle when cooling mode is active. This is not indicative of a fault.

Calling up the air conditioning menu via the climate bar or the air conditioning control panel

The air conditioning menu can be called up via the climate bar. The climate bar is always shown on the lower edge of the media display.

- ▶ Select the **Climate menu** entry in the air conditioning bar.

Activating/deactivating the A/C function via the air conditioning menu

Multimedia system:

- ▶ **Climate menu** ▶ **First row of seats**

Depending on the external conditions, support for improved cooling and dehumidification of the interior air will be provided when the A/C function is activated. If it is not possible to operate the A/C function on the climate bar on the central display, switch the function on or off in the climate menu of the central display.

- ▶ Select **A/C** (A/C).

Switch off the A/C function only briefly; otherwise, the windows may mist up more quickly.

Condensation may drip from the underside of the vehicle when cooling mode is active. This is not indicative of a fault.

Setting climate control to automatic mode

In automatic mode, the set temperature is controlled and maintained at a constant level by the air supply.

▶ Press button .

▶ **To switch to manual mode:** press the  or  button.

In automatic mode, you can choose between five different air quantities using the  button. Automatic mode is retained.

Selecting climate modes via the air conditioning menu

Multimedia system:

↳ [Climate menu](#)

It is possible to switch between different climate modes on the Climate menu via the ECO button.

If ECO or ECO+ mode is activated, certain climate control functions will be restricted to conserve energy and extend the vehicle's range.

The following modes are available on the Climate menu:

- **Comfort:** maximum climate comfort
- **ECO:** while heating and cooling output are limited, it remains possible to operate climate

control without restriction. If you activate , the system will automatically switch to Comfort mode.

- **ECO+:** mode using only the blower and waste heat, if applicable. The temperature can no longer be adjusted. If you activate , the system will automatically switch to Comfort mode.
- i** The windows may mist up more when ECO or ECO+ mode is activated. If windows mist up, the blower setting should be varied and, if necessary, the Comfort air-conditioning mode should be selected. If necessary, also switch on the "Demist windscreen" function  (→ page 208).
- i** ECO+ climate mode can also be switched on and off via the range maximisation button (→ page 225) on the EQ menu under [Range](#). When the range maximisation function is deactivated, the system will automatically switch to the last selected climate mode.
- i** If ECO+ mode or range maximisation is activated, the seat heating will automatically be deactivated.

- i** If there is a low outside and vehicle interior temperature, the heating output via air will be reduced and the seat heating will automatically be activated to increase the range (→ page 163).
- i** If the vehicle is parked in the ECO or ECO+ mode for a short period, the previously selected mode will still be activated the next time the vehicle is started. If the vehicle is parked in ECO or ECO+ mode for a longer period of time, the system will automatically switch to Comfort mode the next time the vehicle is started.

▶ Tap on [ECO](#).

▶ Select [Comfort](#), [ECO](#) or [ECO+](#).

If an ECO mode is selected via the air conditioning control panel, two LEDs will appear below the temperature display. When ECO mode is switched on, one LED will light up green on the temperature display. When ECO+ mode is switched on, both LEDs will light up green and the ECO+ display will appear.

Overview of the air distribution settings

The symbols on the display indicate which vents the airflow is being directed through:

-  Demister and side air vents
-  Centre and side air vents
-  Footwell and side air vents
-  Centre, side and footwell vents
-  Demister, footwell and side air vents
-  All vents
-  Demister, centre and side air vents
-  Automatic air distribution

Setting air distribution via the air conditioning menu

Multimedia system:

➔ Climate menu

- ▶ Select **First row of seats** or **Second row of seats**.
- ▶ To set air distribution: select ,  or .

- ▶ Set the airflow.

i When the air conditioning system is switched on, at least one zone is always active. However, several air distribution options can be selected at the same time, for example to set the climate control for the vehicle interior and the footwells simultaneously. The  climate control for the windscreen can only be selected for the first seat row. When automatic mode is active, the buttons for setting the air distribution are deactivated automatically. If the air conditioning system is deactivated, the buttons remain operable and the last setting is saved.

Switching the synchronisation function on/off via the air conditioning menu

Multimedia system:

➔ Climate menu ➔ First row of seats

The synchronisation function controls the climate control centrally. The driver's settings for temperature, airflow and air distribution are automatically adopted for each climate zone.

- ▶ Select **SYNC** (SYNC).

Demisting the windows

Windows misted up on the inside

- ▶ Press the **AUTO** button.
- ▶ If the windows remain misted up: press the  button.

Windows misted up on the outside

- ▶ Switch on the windscreen wipers.
- ▶ Press the **AUTO** button.

Switching air-recirculation mode on/off

- ▶ Press the  button.
The interior air will be recirculated.

Air-recirculation mode automatically switches to fresh air mode after a while.

- i** If air-recirculation mode is switched on, the windows may mist up more quickly. Switch on air-recirculation mode only briefly.

Pre-entry climate control using the key

Pre-entry climate control using the key

Before you get into the vehicle, the driver's side or the whole vehicle interior can be briefly pre-warmed or pre-cooled.

During pre-cooling, the following functions will be activated as needed:

- Automatic climate control
- Blower
- Seat ventilation

During pre-heating, the following functions will be activated as needed:

- Automatic climate control
- Blower
- Seat heating
- Steering wheel heater
- Mirror heater
- Rear window heater

Switching pre-entry climate control via the key on/off

Requirements:

- The high-voltage battery is charged sufficiently.
- The function has been activated via the multimedia system.

To switch on: unlock the vehicle. The climate control functions are activated for up to five minutes for pre-heating and pre-cooling.

Pre-entry climate control via the key cannot be activated more than three times when the vehicle is switched off.

To switch off: push the  button up or down.

The following functions will remain active once the vehicle has been started:

- Seat heating
- Seat ventilation

Pre-entry climate control for departure time

Pre-entry climate control for departure time function

⚠ WARNING Risk of fatal injury due to exposure to extreme heat or cold in the vehicle

If persons, particularly children, are subjected to prolonged exposure to intense heat or cold, there is a risk of severe injury or even death.

▶ Never leave persons, particularly children, unattended in the vehicle.

The vehicle interior can be air conditioned when the vehicle is parked.

When the vehicle is connected to power supply equipment, priority will be given to charging the high-voltage battery to a specified minimum state of charge.

The running time of pre-entry climate control may be reduced under the following conditions:

- The vehicle is not connected to power supply equipment.

- The high-voltage battery is not charged sufficiently.

With active pre-entry climate control, the state of charge of the high-voltage battery may be reduced, even if the charging cable connector is inserted.

During cooling, the following functions will be activated as needed:

- Automatic climate control
- Blower
- Seat ventilation

During heating, the following functions will be activated as needed:

- Automatic climate control
- Blower
- Seat heating
- Steering wheel heater
- Mirror heater
- Rear window heater

Setting pre-entry climate control for departure time

Multimedia system:

↳ Climate menu ▶▶ Pre-entry climate ctrl

Setting a single departure time

- ▶ Select **ONCE**.
- ▶ Set a departure time.

Changing the active departure time

- ▶ Select the pen icon next to the displayed departure time.
- ▶ Set a departure time.

Setting the week profile

- ▶ Select **WEEK PROFILE**.
- ▶ Set the desired departure times, e.g. every day at 08:00.

Selecting the zone

- ▶ Select .

- ▶ Select **Driver's seat only**.
If the **Driver's seat only** setting is deactivated, pre-entry climate control will take place for the entire vehicle.

You can watch an animation on this topic via the following link:

Activating/deactivating pre-entry climate control for departure time

⚠ WARNING Risk of fatal injury due to exposure to extreme heat or cold in the vehicle

If persons, particularly children, are subjected to prolonged exposure to intense heat or cold, there is a risk of severe injury or even death.

- ▶ Never leave persons, particularly children, unattended in the vehicle.

Requirements

- The high-voltage battery is charged sufficiently.
- The function has been activated via the multimedia system.

- ▶ **To activate:** set the departure time (→ page 210).
Pre-entry climate control for departure time will switch on a maximum of 55 minutes before the selected departure time. It will remain active for another ten minutes if the departure is delayed.
- ▶ **To deactivate:** press the  button up or down.

The following functions will remain active once the vehicle has been started:

- Seat heating
 - Seat ventilation
-  You can also activate the function via the Mercedes me App.

Activating/deactivating immediate pre-entry climate control

 **WARNING** Risk of fatal injury due to exposure to extreme heat or cold in the vehicle

If persons, particularly children, are subjected to prolonged exposure to intense heat or cold, there is a risk of severe injury or even death.

- ▶ Never leave persons, particularly children, unattended in the vehicle.

Air-conditioning of the vehicle interior can continue for up to 30 minutes, e.g. if the journey is interrupted.

The colours of the indicator lamp on button  have the following meanings:

- **Blue:** cooling is activated.
- **Red:** heating is activated.
- **Yellow:** the departure time has been preselected.

- ▶ Set the desired temperature using the  button.

- ▶ Press button ① .
The red or blue indicator lamp on button ① will light up or go out.
- ① You can also activate the function via the Mercedes me App.

Air vents

Adjusting the front air vents

⚠ WARNING Risk of burns or frostbite due to being too close to the air vents

Very hot or very cold air can flow from the air vents.

- ▶ Make sure that all vehicle occupants always maintain a sufficient distance from the air vents.
- ▶ If necessary, direct the airflow to another area of the vehicle interior.

To guarantee the flow of fresh air through the air vents into the vehicle interior, note the following:

- Always keep the vents and ventilation grilles in the vehicle interior clear.
- Keep the air inlet free of residue build-up (→ page 499).

- ▶ **To open or close:** hold the centre of air vent ① and turn it to the left (open) or right (closed) as far as it will go.
- ▶ **To set the airflow direction:** hold the centre of air vent ① and move it up or down or to the left or right.

Adjusting the rear air vents

⚠ WARNING Risk of burns or frostbite due to being too close to the air vents

Very hot or very cold air can flow from the air vents.

- ▶ Make sure that all vehicle occupants always maintain a sufficient distance from the air vents.
- ▶ If necessary, direct the airflow to another area of the vehicle interior.

- ▶ **To open or close:** hold the centre of air vent ❶ and turn it to the left or right as far as it will go.
- ▶ **To set the airflow direction:** hold the centre of air vent ❶ and move it up or down or to the left or right.

Driving

Notes on electric mode

⚠ WARNING Risk of chemical burns and poisoning from damaged high-voltage battery

If the housing of the high-voltage battery has been damaged, electrolyte and gases may leak out.

- ▶ Avoid contact with the skin, eyes or clothing.
- ▶ Immediately rinse electrolyte splashes off with water and seek medical attention straight away.

⚠ DANGER Risk of fire and explosion from excessive internal pressure of the high-voltage battery

In the event of a vehicle fire, flammable gas can escape and ignite.

- ▶ Stop the charging process immediately in case of unusual odours, smoke or burn marks.

- ▶ Leave the danger zone immediately. Secure the danger zone at a sufficient distance.
- ▶ Call the fire service.

Observe the following notes on vehicle noise emissions and the acoustic vehicle alerting system:

- The vehicle is equipped with an all-electric drive system and produces considerably lower vehicle noise emissions than a vehicle with a combustion engine.

For this reason the vehicle is equipped with a sound generator, which serves as an acoustic vehicle alerting system (AVAS). This safety device is prescribed by law.

The external noise of the sound generator is perceptible in the vehicle interior at low speeds and does not represent a malfunction.

- The sound generator generates a stationary noise and speed-dependent vehicle noise emissions at a speed of up to around 30 km/h when the vehicle is driving both forwards and in reverse.

This helps other road users, particularly pedestrians and cyclists, to hear your vehicle better.

- When you drive at speeds above 20 km/h the acoustic vehicle alerting system will gradually switch off.
- Despite the sound generator, the vehicle still may not be heard by other road users. Adapt your driving style accordingly.
- The sound generator will be off when the vehicle is stationary.

Manually disconnecting the high-voltage on-board electrical system

⚠ DANGER Risk of death and fire due to modified and/or damaged components of the high-voltage on-board electrical system

The vehicle's high-voltage on-board electrical system is under high voltage. If you modify component parts in the vehicle's high-voltage on-board electrical system or touch damaged

component parts, you may be electrocuted. In addition, modified and/or damaged components may cause a fire.

In the event of an accident or impact to the vehicle underbody, components of the high-voltage electrical system may be damaged although the damage is not visible.

- ▶ Never make any modifications to the high-voltage on-board electrical system.
- ▶ Do not switch on or use the vehicle if its high-voltage on-board electrical system components have been modified or damaged.
- ▶ Never touch damaged components of the high-voltage on-board electrical system.
- ▶ After an accident, do not touch any components of the high-voltage on-board electrical system.
- ▶ After an accident, have the vehicle transported away.
- ▶ Have the components of the high-voltage on-board electrical system checked at a

qualified specialist workshop and replaced if necessary.

Requirements

Only disconnect the high-voltage on-board electrical system manually in the following situations:

- The  restraint system warning lamp lights up in the driver's display, e.g. after an accident.
- The vehicle is badly damaged, e.g. after an accident, and the restraint system components have not been triggered.

Operating the high-voltage disconnect device

Only disconnect the high-voltage on-board electrical system manually in the above-mentioned situations.

- ▶ Switch off the vehicle.
- ▶ Switch the transmission to position **P**.
- ▶ Apply the electric parking brake.
- ▶ Secure the vehicle against rolling away.
- ▶ Open the bonnet.

- ▶ Press release tab **1** in the direction of the arrow and pull it out.
- ▶ Pull high-voltage disconnect device **2** in the direction of the arrow until it engages. The high-voltage on-board electrical system is switched off.

All work on the drive system (including after disconnecting the high-voltage on-board electrical

system manually) may only be carried out in a qualified specialist workshop.

Switching on the power supply or the vehicle

⚠ WARNING Accident- and risk of injury with unsupervised children in the vehicle

If you leave children unattended in the vehicle, they can in particular

- Open doors and thereby endanger other persons or road users.
- get out of the car and are hit by traffic.
- Operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:

- releasing the parking brake.
- change the gearbox setting.
- start the vehicle.

- ▶ Never leave children unattended in the vehicle.
- ▶ When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- ▶ Keep the key out of reach of children.

Requirements

- The key is in the vehicle and is recognised.
- The brake pedal is not depressed.

- ▶ **To switch on the power supply:** press button **1** once. You can, for example, switch on the wind-screen wipers.

The power supply will be switched off again if the following conditions are met:

- You open the driver's door.
- You press button **1** twice more.

- ▶ **To switch on the vehicle:** press button ① twice.
Indicator and warning lamps will light up on the driver's display.

The vehicle will be switched off again if one of the following conditions is met:

- You do not start the vehicle within 15 minutes and the transmission is in position **P** or the electric parking brake is applied.
- You press button ① once.

Starting the vehicle

Starting the vehicle with the start/stop button

⚠ WARNING Accident- and risk of injury with unsupervised children in the vehicle

If you leave children unattended in the vehicle, they can in particular

- Open doors and thereby endanger other persons or road users.
- get out of the car and are hit by traffic.

- Operate vehicle equipment and become trapped, foreexample.

In addition, the children could also set the vehicle in motion, for example by:

- releasing the parking brake.
- change the gearbox setting.
- start the vehicle.

- ▶ Never leave children unattended in the vehicle.
- ▶ When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- ▶ Keep the key out of reach of children.

Requirements

- The key is in the vehicle and is recognised.

- ▶ Shift the transmission to position **P** or **N**.
- ▶ Depress the brake pedal and press button ① once.
 - The vehicle will be started.
 - The **READY** display appears on the driver's display: the vehicle is ready to drive.

▶ If the vehicle does not start: switch off non-essential consumer equipment and press button ① once.

▶ If the vehicle still does not start and the **Place the key in the marked space** See **Owner's Manual** display message appears on the driver's display: start the vehicle with the key in the marked space (emergency operation mode) (→ page 218).

① You can switch off the vehicle while driving. To do this, press and hold button ① for about three seconds or press button ① three times within three seconds. The transmission shifts to neutral **N** automatically. When you press button ① again, the vehicle will start again and you can engage drive position **D** again. Be sure to observe the safety notes concerning this under "Driving tips" (→ page 219).

Observe any information regarding display messages that may be shown on the driver's display.

Starting the vehicle with the key in the storage compartment (emergency operation mode)

⚠ WARNING Accident- and risk of injury with unsupervised children in the vehicle

If you leave children unattended in the vehicle, they can in particular

- Open doors and thereby endanger other persons or road users.
- get out of the car and are hit by traffic.
- Operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:

- releasing the parking brake.
- change the gearbox setting.
- start the vehicle.

▶ Never leave children unattended in the vehicle.

▶ When leaving the vehicle, always take the SmartKey with you and lock the vehicle.

▶ Keep the key out of reach of children.

If the vehicle does not start and the **Place the key in the marked space** See **Owner's Manual** display message appears on the driver's display, you can start the vehicle in emergency operation mode.

Marked space (example with cup holder without cover)

- ▶ Open the cover of marked space ② if necessary.
 - ▶ Make sure that marked space ② is empty.
 - ▶ Remove key ① from the key ring.
 - ▶ Place key ① in marked space ② on symbol ③.
- The vehicle will start after a short time.
- If you remove key ① from marked space ②, it will still be possible to continue driving the vehicle. For further engine starts, however, key ① must be located on symbol ③ in marked space ② during the entire journey.
- ▶ Have key ① checked at a qualified specialist workshop.

If the vehicle does not start:

- ▶ Place key ① in marked space ② and leave it there.
 - ▶ Depress the brake pedal and start the vehicle using the start/stop button.
- ① You can switch on the power supply or the vehicle with the start/stop button.

Observe any information regarding display messages that may be shown on the driver's display.

Running-in notes

- In certain handling and driving safety systems, the sensors adjust automatically while a certain distance is being driven after the vehicle has been delivered or after repairs. Full system effectiveness is only reached when this teaching-in process has concluded.
- Brake pads, brake disks and tyres that are either new or have been replaced only achieve optimum braking effect and grip after driving several hundred kilometres. Compensate the reduced braking effect by applying greater force to the brake pedal.

Notes on driving

⚠ WARNING Risk of accident due to objects in the driver's footwell

Objects in the driver's footwell may impede pedal travel or block a depressed pedal.

This will jeopardise the operating and road safety of the vehicle.

- ▶ Stow all objects in the vehicle securely so that they cannot get into the driver's footwell.
- ▶ Make sure that there is always sufficient clearance for the pedals.
- ▶ Always fit the floor mats securely and as prescribed.
- ▶ Do not use loose floor mats and do not place floor mats on top of one another.

⚠ WARNING Risk of accident due to incorrect footwear

Incorrect footwear includes, for example:

- shoes with platform soles
- shoes with high heels
- slippers

There is a risk of an accident.

- ▶ Always wear suitable footwear so that you can operate the pedals safely.

⚠ WARNING Risk of accident if the vehicle is switched off while driving

If you switch off the vehicle while driving, safety functions are restricted or no longer available.

This may affect the power steering system and the brake force boosting, for example.

You will need to use considerably more force to steer and brake, for example.

- ▶ Do not switch off the vehicle while driving.

⚠ WARNING Risk of accident due to the brake system overheating

If you leave your foot on the brake pedal when driving, the brake system may overheat.

This increases the braking distance and the brake system can even fail.

- ▶ Never use the brake pedal as a footrest.
- ▶ Do not depress the brake pedal and the accelerator pedal at the same time while driving.

! NOTE Reduced battery life due to frequent short-distance trips

The 12 V battery may not be sufficiently charged when the vehicle is used only for short-distance trips. This reduces the life of the battery.

- ▶ Drive longer distances regularly to charge the battery.

! NOTE Vehicle damage due to failure to observe the maximum permissible clearance height

If the vehicle height exceeds the maximum permissible clearance height, the roof and other vehicle parts may be damaged.

- ▶ Please observe the indicated maximum clearance height.
- ▶ If the vehicle exceeds the permissible clearance height, do not drive in.
- ▶ Take the modified vehicle height in the case of roof superstructures or other carrier systems into account.

- ⓘ Please bear in mind that all the speed values stated in this Owner's Manual are approximate and are subject to a certain tolerance.

Observe the notes on driving with a roof load, trailer or fully laden vehicle.

Driving with a loaded roof luggage rack or trailer, or with the vehicle fully loaded or occupied, changes the handling and steering characteristics of your vehicle.

Therefore please observe the following notes:

- Do not exceed the permissible roof load and trailer load. Also observe the information in the technical data in this respect.
- Distribute the roof load and vehicle load evenly, and place heavy objects at the bottom. Also observe the notes on loading the vehicle (→ page 170) .
- Drive carefully, avoiding abrupt starting, braking and steering as well as fast cornering.

Notes on driving on roads treated with deicing salt

The braking effect is limited on road surfaces treated with deicing salt.

Therefore, observe the following notes:

- Due to salt build-up on the brake disks and brake pads, the braking distance can increase considerably or result in one-sided braking.
- Maintain a much greater safety distance to the vehicle travelling ahead.

Remove salt build-up as follows:

- Brake occasionally, paying attention to the traffic conditions
- Carefully depress the brake pedal at the end of the journey and when starting the next journey

Notes on aquaplaning

Aquaplaning can take place if a certain depth of water has built up on the road surface.

Observe the following notes during heavy precipitation or in conditions in which aquaplaning may occur:

- Reduce speed
- Avoid tyre ruts
- Avoid sudden steering movements

- Brake carefully

i Also observe the notes on regularly checking wheels and tyres (→ page 23).

Notes on driving through water on the road

Water ingress can damage the drive system, electrics and transmission.

Observe the following if you need to drive through water:

- The water, when calm, may reach no higher than the lower edge of the vehicle body.
- Drive at a walking pace at most, otherwise water may enter the vehicle.
- Vehicles travelling ahead, or oncoming vehicles, can create waves which may exceed the maximum permissible depth of the water.

The braking effect of the brakes is reduced after fording. Brake carefully, paying attention to the traffic conditions, until braking power has been fully restored.

ECO display function

The ECO display shows an evaluation of your driving style on the driver's display depending on the situation. This enables you to check the efficiency of your driving style and adjust it if necessary. The **ECO display** menu shows a ball (2) that will roll forwards or backwards in the direction of travel on a stylised road according to the driving characteristics.

Above and below the road, lines mark the area for an efficient driving style (3). Ball (2) will light up in green if it is rolling within these lines. Outside the lines, the ball will light up in orange.

The ECO display assesses the following criteria for an economical driving style:

- Coasting at the right times
- consistent speed
- moderate acceleration

The overall assessment of your driving style "from start" is indicated using stars ①. It starts with five empty stars, which you can fill one after the other if you drive efficiently. When all five stars are filled, a glow will appear in the background.

- ① You can call up the **ECO display** function via the **Classic** menu (→ page 337).

Recuperative brake system

■ Function of the recuperative brake system

The recuperative braking system converts the vehicle's kinetic energy into electrical energy during overrun and braking.

Depending on the selected recuperation level, the electric motors are operated as an alternator when in overrun mode and during braking in order to charge the high-voltage battery while driving.

As soon as you take your foot off the accelerator pedal while driving in transmission position **D** or **R**, recuperation starts in overrun mode.

The higher the recuperation, the more sharply the vehicle is braked when coasting and the more electrical energy is fed into the high-voltage battery.

The deceleration in overrun mode may not be sufficient depending on the driving situation. There is no deceleration to a standstill. Also brake with the service brake if necessary. Always adapt your speed to the driving situation and keep sufficient distance.

- ① If you brake heavily, the mechanical brake is also used. This means that the maximum recuperation energy cannot be recovered. The more proactively you accelerate and brake, the more efficiently energy can be recuperated.

System limits

With recuperation in overrun mode, the braking effect of the electric motor is only reduced or non-existent in the following situations:

- when the high-voltage battery charge level increases
- if the high-voltage battery is not yet at a normal operating temperature

You can watch an animation on this topic via the following link:

■ Manually setting recuperative deceleration

In the transmission position **D** you can use the steering wheel gearshift paddles to manually adjust the intensity of recuperation in overrun mode.

i After restarting the vehicle the following recuperation level is set:

- **D AUTO**: if **D AUTO** was selected previously.
- **D**: if a recuperation level other than **D AUTO** was selected previously.

The following recuperation levels are available:

- **D AUTO** Intelligent, anticipatory recuperation with the ECO Assist (→ page 223)
- **D +** Light recuperation
- **D** Normal recuperation
- **D -** Reinforced recuperation: increased deceleration in overrun mode

- ▶ Select transmission position **D**.
- ▶ **Increase recuperation**: briefly pull on the shift paddle **1**.
- ▶ **Reduce recuperation**: briefly pull on the shift paddle **2**.
- ▶ **Select **D AUTO****: pull for a long time on the shift paddle **1** or **2**.

When shifting to transmission position **R** the current recuperation level with the exception of **D AUTO** is adopted. If **D AUTO** was previously selected, in transmission position **R** the deceleration in recuperation level **D** is set. In a subsequent shift to transmission position **D** the previously selected variable recuperation is **D AUTO** set again.

The driver display shows the currently set recuperation level alongside the transmission position display.

ECO Assist

ECO Assist function

ECO Assist is only an aid. It is not a substitute for you paying attention to your surroundings and does not relieve you of your responsibility pertaining to road traffic law. The driver is responsible for keeping a safe distance from the vehicle in front, for vehicle speed and for braking in good time.

⚠ WARNING Risk of accident if ECO Assist does not provide sufficient deceleration

ECO Assist only brakes your vehicle when you take your foot off the gas pedal. If vehicles are detected late, e.g. after tight curves, or if you do not react immediately to the ECO Assist display, the deceleration may not be sufficient.

- ▶ React promptly to the ECO Assist recommendation and take your foot off the gas pedal.
- ▶ Adjust your speed to the driving conditions and maintain a suitable distance from the vehicle in front.

▶ Brake the vehicle yourself and/or take evasive action.

ECO Assist is active only in **D** **AUTO**
(→ page 222).

Depending on the vehicle's equipment, ECO Assist analyses data for the vehicle's expected route. This allows the system to optimally adjust the driving style for the route ahead, use minimal energy and recuperate as much as possible. If the system has detected an event ahead or a vehicle in front and the vehicle is approaching the event, ECO Assist will calculate an optimised speed profile based on the distance, speed and available route information.

If you release the accelerator pedal in this case, intelligent recuperation will start in overrun mode. The deceleration in overrun mode may not be sufficient depending on the driving situation. The vehicle will not be decelerated to a standstill. Also brake with the service brake if necessary. Always adapt your speed to the driving situation and keep sufficient distance. This will be the case particularly if, for example, the detected vehicle ahead stops in front of you or you pull away again in

slow-moving traffic and the distance to the vehicle in front is very short.

① "Foot off the accelerator" recommendation

② Route event ahead

ⓘ ECO Assist can also be shown on the head-up display.

If a route event that requires an adjustment of your driving style is detected ahead, corresponding symbol ② and the  symbol (grey) will be displayed.

If you release the accelerator pedal, the  symbol will turn green and recuperation in over-

run mode will be initiated. If the deceleration is not sufficient, also apply the service brake.

If ECO Assist intervenes for a route event ahead and you press the accelerator pedal, you will end control by ECO Assist. This does not apply in the case of a vehicle in front.

The ECO Assist display will be hidden again in the following cases:

- You do not react to the ECO Assist recommendation for a long time.
- You press the accelerator pedal while ECO Assist is intervening because of a route event ahead. This does not apply in the case of a vehicle in front.
- ECO Assist cannot identify any further recommendations from the route ahead.

In addition to a vehicle in front , ECO Assist can detect the following route events ② depending on the vehicle's equipment:

-  Roundabout
-  Sharp bend
-  Junction

-  T-junction
-  Downhill gradient
-  Speed limit

To enable ECO Assist to react to future route events, the equipment-dependent speed adaptation functions of Active Distance Assist must be active (→ page 285).

System limits

If the calculated route is adhered to when route guidance is active, ECO Assist will operate with greater accuracy. The basic function is also available without active route guidance. Not all information and traffic situations can be foreseen. The quality depends on the map data.

-  ECO Assist will be available after you drive off, as soon as the sensor check is completed.

The system may be impaired or may not function in the following situations:

- if there is poor visibility, e.g. owing to insufficient road illumination, highly variable shade conditions, rain, snow, fog or heavy spray.

- If there is glare, e.g. from oncoming traffic, direct sunlight or reflections.
- If the windscreen is dirty in the vicinity of the multifunction camera.
- If the multifunction camera is misted up, damaged or obscured.
- If road signs are hard to detect, e.g. due to dirt, snow or insufficient lighting, or because they are obscured.
- If the digital road map of the navigation system has incorrect or outdated information.
- If signs are ambiguous, e.g. road signs in roadworks or in adjacent lanes.
- If the radar sensors are dirty or obscured.
- When you drive on roads with steep gradients.
- If there are narrow vehicles in front, such as bicycles or motorcycles.

You can watch an animation on this topic via the following link:

Range maximisation

Range maximisation function

The range maximisation function enables a maximum range gain. To achieve this, the function partially or completely switches off convenience systems that are not relevant to driving and activates efficiency-enhancing driving functions.

The range maximisation function controls the restrictions of the following function groups:

- **Climate control**
 - Deactivating the active climate control function. Switching to ECO+ climate mode. Using only the blower and, if necessary, waste heat utilisation (→ page 207).
Deactivating rear window and mirror heaters. The windows may mist up more
- **Interior**
 - Switching off ambient lighting, displays and certain charging functions
- **Seating comfort**
 - Deactivating the steering wheel heater and seat heating

- **ECO drive functions**

- Changing to the  drive program

If necessary, you can deactivate the restrictions of individual function groups again. This will reduce the maximum range gain by the value specified for the function group.

If you switch on a deactivated function while range maximisation is activated, all restrictions of the corresponding function group will be removed and the maximum range gain will be reduced accordingly. For example, if you switch on the seat heating again, all restrictions on the "Seating comfort" function group will be deactivated.

The specified range gain for the ECO drive functions can be achieved only if you drive in an energy-efficient way and without kickdown in drive program .

Activating/deactivating range maximisation

Multimedia system:

 **Settings** **EQ** **Range**

- ▶ Activate or deactivate **Maximum range**. All function groups concerned will be activated or deactivated.

or

- ▶ Individually activate or deactivate the individual subsystems of the four **Climate control**, **Interior**, **Seat comfort** and **ECO drive functions** function groups.

DYNAMIC SELECT

Function of DYNAMIC SELECT

DYNAMIC SELECT allows a drive program to be selected quickly according to the current driving situation or the desired vehicle characteristics (→ page 227).

Depending on the drive program selected, the following vehicle characteristics will change:

- Drive

- Vehicles with adaptive damping adjustment: suspension
- Steering
- ESP®

Available drive programs

Individual

- Individual settings for the following vehicle characteristics (→ page 228):
 - Drive
 - Suspension
 - Steering
 - ESP®

Sport

- Maximum power availability
- Stability but with a sporty, dynamic setup
- Suitable only for good road conditions, a dry surface and a clear stretch of road

Comfort

- Comfortable driving style

- Balance between traction and stability
- Recommended for all road conditions
- Best balance between efficiency and performance for all driving conditions

E Eco

- Economical setting of vehicle functions
- Balance between traction and stability
- Recommended for all road conditions
- Limitation of maximum speed to 130 km/h

If you depress the accelerator pedal beyond the point of resistance (kickdown), the limitation of maximum speed will be deactivated.

- **Navigation with Electric Intelligence:** When the [Schedule charging stops](#) route option is switched on and route guidance is active, the maximum speed recommended by active range monitoring will be displayed on the speedometer (→ page 338). It is the driver's own responsibility to comply with it in order to reach the next scheduled charging station.

The ESP® settings in drive programs **E** and **C** are designed for stability. Therefore, choose

one of these drive programs especially when transporting roof loads, in trailer operation and when the vehicle is fully laden or fully occupied.

Notes on the roof load display

Certain drive programs and ESP® settings are unsuitable for transporting a roof load.

If one of these drive programs is set or selected, the  symbol is shown as a warning. When this symbol is shown, the selected drive program is not suitable for transporting a load on the roof.

The following drive programs are affected:

- Drive program **S** Sport
- Drive program **I*** Individual with the ESP® setting Sport

Selecting the drive program

▶ Press DYNAMIC SELECT button **1** repeatedly until the selected drive program appears on the driver's display.

or

▶ Press DYNAMIC SELECT button **1** and select the drive program on the DYNAMIC SELECT menu on the central display.

Configuring DYNAMIC SELECT in the multimedia system

Multimedia system:

→  → Settings → Vehicle
→ DYNAMIC SELECT

Setting drive program I

▶ Select  Individual.

▶ Select and set a category.

ⓘ A sporty ESP mode can be set in conjunction with a sporty suspension mode.

Switching the reset display on/off

▶ Activate or deactivate **Ask when starting**.

ⓘ This function must be activated for each user profile separately. The drive program for the respective user profile of the last driver is only stored if this function is activated.

Function on: the next time the vehicle is started a prompt appears asking whether the last active drive program should be restored.

ⓘ The prompt appears only if the previously active settings deviate from the standard settings.

Function off: the next time the vehicle is started the  drive program is set automatically.

Displaying vehicle data

Multimedia system:

→  → Info

▶ Select **Vehicle**.
The vehicle data is displayed.

Calling up the fuel consumption indicator

Multimedia system:

→  → EQ

▶ Select **Consumption**.
The current and average fuel consumption will be displayed.

Transmission

DIRECT SELECT lever

Function of the DIRECT SELECT lever

⚠ WARNING Accident- and risk of injury with unsupervised children in the vehicle

If you leave children unattended in the vehicle, they can in particular

- Open doors and thereby endanger other persons or road users.
- get out of the car and are hit by traffic.
- Operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:

- releasing the parking brake.
- change the gearbox setting.
- start the vehicle.

▶ Never leave children unattended in the vehicle.

- ▶ When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- ▶ Keep the key out of reach of children.

⚠ WARNING Risk of accident and injury when the transmission position is not engaged

The current transmission position will be highlighted on the driver's display.

If the selected transmission position is not highlighted, the vehicle may pull away in the wrong direction or roll away.

- ▶ After changing the transmission position, always check the transmission position display on the driver's display.

If the transmission position is not highlighted on the driver's display even after a short time:

- ▶ Pay attention to the display messages.
- ▶ Pull away carefully and check the engaged transmission position.

- ▶ When parking, engage the parking brake and secure the vehicle against rolling away.
- ▶ Have the transmission checked immediately at a qualified specialist workshop.

Use the DIRECT SELECT lever to switch the transmission position. The current transmission position will be highlighted on the driver's display.

- P** Park position
- R** Reverse gear
- N** Neutral
- D** Drive position

Engaging reverse gear R

- ▶ Depress the brake pedal and push the DIRECT SELECT lever upwards past the first point of resistance.

Engaging neutral N

- ▶ Depress the brake pedal and push the DIRECT SELECT lever up or down to the first point of resistance, holding it there until transmission position **N** is shown on the driver's display.

Subsequently releasing the brake pedal will allow you to move the vehicle freely, e.g. to push it or tow it away.

If you want the transmission to remain in neutral **N** even if the vehicle is switched off:

- ▶ Start the vehicle.
 - ▶ Depress the brake pedal and engage neutral **N**.
 - ▶ Release the brake pedal.
 - ▶ Switch off the vehicle.
- i** If you then exit the vehicle leaving the key in the vehicle, the transmission will remain in neutral **N**.

Engaging park position P

⚠ WARNING Accident- and risk of injury with unsupervised children in the vehicle

If you leave children unattended in the vehicle, they can in particular

- Open doors and thereby endanger other persons or road users.
- get out of the car and are hit by traffic.
- Operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:

- releasing the parking brake.
- change the gearbox setting.
- start the vehicle.

- ▶ Never leave children unattended in the vehicle.
- ▶ When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- ▶ Keep the key out of reach of children.

! **NOTE** Damage due to engaging park position **P** while the vehicle is rolling

If you shift the transmission into park position **P** while the vehicle is rolling, the transmission may be damaged.

- ▶ If the vehicle is rolling, do not open a door.
- ▶ Only engage the park position **P** when the vehicle is stationary.

- ▶ Observe the notes on parking the vehicle (→ page 255).
- ▶ Depress the brake pedal until the vehicle comes to a standstill.
- ▶ When the vehicle is stationary, press button **1**.
When the **P** transmission position display is shown, park position is engaged. If the **P** transmission position display is not shown,

apply the parking brake and secure the vehicle to prevent it from rolling away.

- i** Depending on the situation, it may take a short time until **P** is engaged. Therefore, always pay attention to the transmission position display.

Park position **P** will be engaged automatically if one of the following conditions is met:

- You switch the stationary vehicle off in transmission position **D** or **R**.
- You open the driver's door when the vehicle is stationary in transmission position **D** or **R**.
- When the vehicle is rolling, you switch it off in transmission position **D** or **R** and bring it to a standstill.
- When the vehicle is rolling, you shift to transmission position **N**, bring the vehicle to a standstill and open the driver's door when the vehicle is stationary.
- Engaging park position **P** automatically is required by the vehicle.

- ⓘ To manoeuvre with the driver's door open, open the driver's door while the vehicle is stationary and engage transmission position **D** or **R** again.

Engaging drive position D

- ▶ Depress the brake pedal and push the DIRECT SELECT lever down past the first point of resistance.

Permanently activating or deactivating manual shifting

Multimedia system:

→ [Home] ▶ Settings ▶ Vehicle ▶ Driving

- ▶ Permanently activate or deactivate the function.

Function of 4MATIC

The flexible all-wheel distribution of the 4MATIC means the drive is always ideally distributed between both axles. Depending on the situation, only the front axle or only the rear axle can be driven, or the drive can be distributed continuously between both axles.

This means that recuperation can be used even more effectively and the range of the vehicle can be increased (→ page 222).

Together with ESP® and 4ETS, 4MATIC improves the traction of your vehicle whenever a driven wheel spins due to insufficient traction.

If you fail to adapt your driving style, 4MATIC can neither reduce the risk of an accident nor override

the laws of physics. It cannot take into account road, weather or traffic conditions. 4MATIC is only an aid. You are responsible especially for maintaining a safe distance from the vehicle in front, for vehicle speed, for braking in good time and for staying in lane.

- ⓘ In wintry road conditions, the maximum effect of the flexible all-wheel distribution can be achieved only if you use winter tyres (M+S tyres), with snow chains if necessary.

Charging the high-voltage battery

Notes on charging the high-voltage battery

⚠ DANGER Risk of fatal injuries in case of improper handling of the Flexible Charging System Pro

If you use the Flexible Charging System Pro improperly, this may result e.g. in fires or an electric shock.

- ▶ Observe the notes in the Owner's Manual for the Flexible Charging Systems

Pro. Otherwise risks may not be detected.

! **NOTE** High-voltage battery damage due to leaving the vehicle idle for lengthy periods of time

Lithium-ion batteries experience a natural self-discharge.

Exhaustive discharging can therefore occur if the vehicle is idle for several months. This can damage the high-voltage battery.

▶ To avoid damage, please observe the following recommendations when handling the high-voltage battery.

! **NOTE** Accelerated ageing of the high-voltage battery due to not observing the following recommendations

As a result of its basic characteristics, the storage capacity of, and the amount of energy available from, the high-voltage battery decreases over the course of its life. As a

result, the maximum electrical range that can be achieved by the vehicle is reduced and its maximum electrical output can be impaired.

The following factors could accelerate the ageing of the high-voltage battery:

- frequently fully charging (charge level 100%) the high-voltage battery, especially when this process is not directly followed by a journey
- frequent rapid charging with direct current (mode 4)
- leaving the vehicle idle for lengthy periods at high ambient temperatures

▶ To avoid accelerated ageing, please observe the following recommendations when handling the high-voltage battery.

! **NOTE** Damage to the drive system when charging the high-voltage battery at extreme altitudes

The drive system may be damaged if the high-voltage battery is charged at elevations greater than 4,000 m above sea level.

It may then no longer be possible to continue the journey.

▶ Avoid charging processes at extreme altitudes.

Recommendations when handling the high-voltage battery:

- Every six months, when the outside temperature is above 10 °C park the vehicle overnight with a charge level below 20 %.
- Rapid-charge the high-voltage battery with direct current (Mode 4) only when required.
- Charge the high-voltage battery on average up to a charge status of 80 %. From a charge status of 80 % the charge time increases significantly.

- In case of longer downtimes, switch off the vehicle with a charge status of the high-voltage battery between 30 % and 50 %. Do not permanently connect the high-voltage battery to a power supply.
- If leaving the vehicle idle for lengthy periods, avoid high outside temperatures wherever possible.
- Every six weeks check the charge level of the high-voltage battery (→ page 253).
- Make sure to charge the high-voltage battery if the charge level is below 20 %.
- Do not disconnect the 12 V battery even if the vehicle is left unused for a lengthy period. Otherwise the condition of the vehicle's high-voltage battery cannot be monitored.

You can contribute to reducing the vehicle's energy consumption in the following ways:

- An anticipatory driving style (→ page 221)
- Reduced use of electrical consumers
- Having the vehicle regularly serviced

During the battery life the charge time of the high-voltage battery may change.

- ⓘ Depending on the national version, your vehicle is equipped with one of the following vehicle sockets.

You can charge the high-voltage battery with both alternating current (mode 2/3) and direct current (mode 4).

Combo 1 vehicle socket

Combo 2 vehicle socket

- ① AC charging port type 1 or type 2
- ② Socket extension for DC charging
- ⓘ When using a CCS charging cable (Combined Charging System) for charging with direct current at a vehicle socket type Combo, both ports on the vehicle socket ① and ② are used for charging.

Charging options for the high-voltage battery (mode 2, 3 or 4):

- While the vehicle is in motion by means of recuperation
- Stationary alternating current charging:
 - At a mains socket (mode 2)
 - at a wallbox or charging station (mode 3)
- Stationary DC charging:
 - At a rapid-charging station (mode 4)

Depending on the country-specific vehicle equipment and your vehicle's charging cable, single phase AC charging is also possible.

Observe the different grid requirements of your current location when charging. Only use charging cables which conform to the grid requirements. Consult a qualified electrician or your local grid operator if you have any questions.

It is recommended that you charge the high-voltage battery at a wallbox or charging station due to the improved charging power and better charging efficiency offered.

System limits

The power output of the high-voltage battery may be impaired by the following:

- high or low outside temperatures
- Electrical auxiliary consumers in the vehicle being switched on, e.g. operating the air conditioning system
- extended periods without charging

The charging time or the charging power of the high-voltage battery may be increased by the following:

- high or low outside temperatures
- A low or high charge status of the high-voltage battery
- The maximum available charge current of the charging device
- The charging process settings in the multimedia system (→ page 253)

You can watch an animation on this topic via the following link:

Stowing the charging cable

Always stow the vehicle's charging cable in the charging cable bag provided, and secure the charging cable bag in the boot or load compartment with the included retaining strap. Otherwise, the charging cable bag with the charging cable is not sufficiently secured.

Example: charging cable bag in the boot/load compartment

As delivered, charging cable bag (1) with retaining strap (2) is located in the boot or load compartment. To secure the charging cable bag, the retaining strap must be attached to tie-down eye (3). Do not use bag hooks to attach the retaining strap.

- ▶ Feed the loop end of retaining strap (2) through tie-down eye (3) in the boot or load compartment.
- ▶ Feed the end with the snap hook through the loop of retaining strap (2).

- ▶ Tighten retaining strap (2) so that the knot around tie-down eye (3) is tight and secure.
- ▶ Hook the snap hook of retaining strap (2) in a tie-down eye of charging cable bag (1).

Notes on charging the high-voltage battery at a mains socket (Mode 2)

⚠ DANGER Risk of fatal injuries in case of improper handling of the Flexible Charging System Pro

If you use the Flexible Charging System Pro improperly, this may result e.g. in fires or an electric shock.

- ▶ Observe the notes in the Owner's Manual for the Flexible Charging Systems Pro. Otherwise risks may not be detected.

⚠ DANGER Risk of fatal injury from incorrectly installed component parts

Connecting the charging cable to a mains socket using incorrectly installed component parts could cause a fire or an electric shock, for example.

- ▶ Only connect the charging cable to a mains socket that:

- Has been properly installed and
- Has been inspected by a qualified electrician
- ▶ For safety reasons, only use the charging cable supplied with the vehicle or an original Mercedes-Benz charging cable.
- ▶ Purchase these parts at a Mercedes-Benz Service Centre and obtain advice there.

Mercedes-Benz thoroughly tests these original charging cables for their suitability for high-voltage charging of your vehicle.

- ▶ Never use a damaged charging cable.
- ▶ Do not use:
 - Extension cables
 - Extension reels
 - Multiple sockets
- ▶ Never use socket adapters to connect the charging cable to the mains socket. The only exception being if the adapter has been tested and approved by the

manufacturer for charging the high-voltage battery of an electric vehicle.

- ▶ Observe the safety notes in the operating instructions for the socket adapter.

Only the following charging cables may be used:

- The charging cable supplied with the vehicle.
- A charging cable that has been approved for the vehicle.

The charging process can vary depending on the power supply equipment. The charging times when charging the high-voltage battery at the mains socket are considerably longer than when charging at a wallbox or charging station.

When doing so, always observe the local information.

Do not leave the charging cable controls hanging loose from a mains socket.

Do not lift the controls by the following component parts:

- the charging cable connector
- the mains plug

When charging, protect the charging cable control element from excessive heat such as direct sunlight. Otherwise the charging process may be aborted.

Notes on charging the high-voltage battery at a wallbox or charging station (mode 3)

⚠ DANGER Risk of fatal injury from incorrectly installed component parts

Connecting the charging cable to a wallbox using incorrectly installed component parts could cause a fire or an electric shock, for example.

- ▶ Only connect the charging cable to a wallbox that:
 - Has been properly installed and
 - Has been inspected by a qualified electrician
- ▶ For safety reasons, only use charging cables that have been tested and approved by the manufacturer for charging the high-voltage battery in an electric vehicle.

ing the high-voltage battery in an electric vehicle.

- ▶ Never use damaged charging cables.
- ▶ Do not extend the charging cable.
- ▶ Do not use adapters.
- ▶ Observe the safety notes in the operating instructions for the wallbox.

If charging at a wallbox without pre-installed cable, use the optionally available charging cable for wallbox and charging station (mode 3). The charging cable is stowed in a bag in the boot/luggage compartment.

Only use charging cables that have been tested and approved by the manufacturer for charging the high-voltage battery in an electric vehicle.

⚠ DANGER Risk of fatal injury due to damaged components

Connecting the vehicle to a charging station using damaged component parts could cause a fire or an electric shock, for example.

- ▶ Perform a visual check of the charging station for obvious defects, for example damage to the housing or charging cable connection.
- ▶ Never use damaged charging cables.
- ▶ Do not use an extension for the charging cable.
- ▶ Do not use adapters.
- ▶ Always observe the safety instructions on the charging station.

Most charging stations must be activated before the charging process, e.g. using an RFID card or via Plug-and-Charge. Observe the on-site operator's instructions for the charging station and the notes on Mercedes me Charge (→ page 401).

The amount of energy dispensed for the charging process, shown by the charging station, may be higher than the amount of energy actually absorbed by the high-voltage battery. This is the result of different levels of charging losses and is described as recharge efficiency. Charging losses occur, for example, due to heat that builds up when the vehicle is charging or from auxiliary consumers

that are switched on. Further information on recharge efficiency can be obtained at a qualified specialist workshop.

Notes on charging the high-voltage battery at a rapid charging station (mode 4)

⚠ DANGER Risk of fatal injury due to damaged components

Connecting the vehicle to a charging station using damaged component parts could cause a fire or an electric shock, for example.

- ▶ Perform a visual check of the charging station for obvious defects, for example damage to the housing or charging cable connection.
- ▶ Never use damaged charging cables.
- ▶ Do not use an extension for the charging cable.
- ▶ Do not use adapters.
- ▶ Always observe the safety instructions on the charging station.

⚠ DANGER Risk of fatal injuries when carrying out maintenance work during the charging process

During the charging process, the high-voltage on-board electrical system is under high voltage.

- ▶ Do not perform any maintenance work during the charging process.

Most charging stations must be activated before the charging process, e.g. using an RFID card or via Plug-and-Charge. Observe the on-site operator's instructions for the charging station and the notes on Mercedes me Charge (→ page 401).

The charging cable for the vehicle must not be longer than 30 m due to the legal requirements in some countries. This is to prevent the interference of signals being received by radio communication devices in the vehicle or in close proximity to the charging station. Be aware that parts of the charging cable may be routed underground. If in doubt, ask the charging station operator if this is the case before charging the high-voltage battery.

The amount of energy dispensed for the charging process, shown by the charging station, may be higher than the amount of energy actually absorbed by the high-voltage battery. This is the result of different levels of charging losses and is described as recharge efficiency. Charging losses occur, for example, due to heat that builds up when the vehicle is charging or from auxiliary consumers that are switched on. Further information on recharge efficiency can be obtained at a qualified specialist workshop.

Maximum permissible charging current for charging at a mains socket

⚠ DANGER Risk of fatal injuries in case of improper handling of the Flexible Charging System Pro

If you use the Flexible Charging System Pro improperly, this may result e.g. in fires or an electric shock.

- ▶ Observe the notes in the Owner's Manual for the Flexible Charging Systems

Pro. Otherwise risks may not be detected.

! **NOTE** Overloading the mains socket due to excessive charging current

If the charging current is too high, the fuse could be tripped or the external mains supply could overheat.

- ▶ Ensure that the external mains supply has been designed to handle the charging current provided.
- ▶ For safety reasons, only use the charging cable supplied with the vehicle or an original Mercedes-Benz charging cable. Mercedes-Benz thoroughly tests these original charging cables for their suitability for high-voltage charging of your vehicle.
- ▶ Purchase these parts at a Mercedes-Benz Service Centre and obtain advice there.

- ▶ Check the maximum charging current using the charging capacity shown in the driver's display.

The charging cable supplied is set to a country-specific maximum charging current value. When charging abroad, the maximum value may exceed the permitted value for that country.

If you use the Mercedes-Benz Flexible Charging System Pro, the maximum charge current can be set country-specifically (see Owner's Manual for the charging system).

- ▶ Before charging at a mains socket, have the maximum permissible charging current for the relevant mains socket or the building checked by a qualified electrician.
- ▶ When abroad, observe the country-specific laws when charging.

If you have questions concerning the charging current or if there is a malfunction, please contact a qualified specialist workshop.

Overview of the charging cable control panel

! **DANGER** Risk of fatal injuries in case of improper handling of the Flexible Charging System Pro

If you use the Flexible Charging System Pro improperly, this may result e.g. in fires or an electric shock.

- ▶ Observe the notes in the Owner's Manual for the Flexible Charging Systems Pro. Otherwise risks may not be detected.

The charging cable control panel of the standard charging cable described below shows the current status of the charging process.

- ① Supply voltage indicator
- ② Charging process indicator
- ③ Temperature monitor indicator
- ④ Safety system indicator

Supply voltage indicator ①

Display	Meaning
Lights up white	The supply voltage is connected.

Charging process indicator ②

Display	Meaning
Flashes green	The high-voltage battery is charging.

Temperature control indicator ③

Display	Meaning
Lights up red	The green LED flashes simultaneously: over-temperature – the charging performance is reduced. The green LED does not flash: over-temperature – the charging process is stopped.
Flashes red	Overtemperature at the mains plug – the charging process is stopped.

Safety system indicator ④

Display	Meaning
Flashes red	Charging cable malfunction – cannot carry out the charging process, reset the charging cable control panel.
Lights up red	White LED is off: power supply malfunction – cannot carry out the charging process, replace the mains socket. White LED is on: vehicle malfunction – cannot carry out the charging process, reset the charging cable control panel.

When all four displays light up, the charging cable control panel is performing a self-test.

If the temperature monitor ③ indicates a malfunction, it may help to protect the charging cable from direct sunlight.

To reset the charging cable control panel: if safety system ④ indicates a charging cable malfunction or a vehicle malfunction, first reset the charging cable operating unit. To do this, disconnect the charging cable from the vehicle and from the mains socket and wait for approximately five seconds. If the malfunction persists after the charging cable is reconnected, charging at the mains socket is not possible. The charging cable must be replaced or the vehicle plug must be checked at a qualified specialist workshop, depending on the indicator.

Functions of the indicator lamps on the vehicle socket

① Depending on the national version, your vehicle is equipped with one of the following vehicle sockets.

The socket flap is centrally locked and unlocked together with the vehicle.

Combo 1 vehicle socket

- ① Socket lamp
- ② Charging process indicator lamp
- ③ Locking status indicator lamp

Combo 2 vehicle socket

- ① Socket lamp
- ② Charging process indicator lamp
- ③ Locking status indicator lamp

The upper arch of socket lamp ① is used for the lighting and flashes or lights up as with indicator lamp ③. The lower arch is used for the status

display and flashes or lights up as with indicator lamp ②.

Overview of the locking status

Locking status ③	Display	Meaning
	Lights up white	Vehicle socket unlocked, insert or remove charging cable
	Flashes white	Malfunction during locking or unlocking

Overview of the charging process status

Status of the charging process ②	Display	Meaning
	Flashes orange	Connection is being established
	Flashes green	Active energy flow
	Lights up orange (for approx. 60 s)	Interruption in charging
	Lights up green (for approx. 60 s)	Charging process completed
	Flashes red (for approx. 90 s)	Vehicle malfunction; charging is not possible

Starting the alternating current charging process (mode 2/3)

⚠ DANGER Risk of fatal injuries in case of improper handling of the Flexible Charging System Pro

If you use the Flexible Charging System Pro improperly, this may result e.g. in fires or an electric shock.

▶ Observe the notes in the Owner's Manual for the Flexible Charging Systems Pro. Otherwise risks may not be detected.

⚠ DANGER Risk of death when charging at a damaged socket

The charging process uses high voltage.

If the charging cable, the vehicle socket or the mains socket are damaged, you could receive an electric shock.

▶ Only use an undamaged charging cable.

- ▶ Avoid mechanical damage such as crushing, abrading or driving over the cable.
- ▶ Have a damaged vehicle socket replaced at a qualified specialist workshop as soon as possible.
- ▶ Never connect the charging cable to a damaged vehicle socket.

! **NOTE** Damage due to overheating of charging cable and charge port

During the charging process, the charging cable and charge port can heat up within the permissible limits.

The permissible limit values are influenced by the following factors:

- the power supply system and the charging cable are not damaged
- the instructions for handling the charging cable and the control element on the charging cable have been observed

- ▶ If the charging cable or charge port becomes too hot, have the power supply system checked.

! **NOTE** Damaged or dirty vehicle socket when the socket flap is open

- ▶ Always keep the socket cover and the socket flap closed when there is no charging cable connected. This protects the vehicle socket from dirt and damage.
- ▶ Make sure that the socket cover is closed properly before closing the socket flap. This can otherwise result in damage which may prevent the socket flap from being opened again.

! **NOTE** Damage to the vehicle socket or the charging cable connector due to incorrect handling

Do not use excessive force (maximum 300 N) to fully insert the charging cable connector into the vehicle socket. You may otherwise

damage the vehicle socket, the charging cable connector or their contacts.

- ▶ If you feel there is increased resistance, pull the charging cable connector out of the socket and reinsert it.

Requirements

- The transmission is in position **P**.
 - The vehicle is unlocked or the vehicle is locked and the distance between the key and the vehicle does not exceed 1 m.
 - The vehicle has not been started.
 - The charging cable is not taut.
- i** Depending on the national version, the vehicle is equipped with one of the following vehicle sockets.

Combo 1 vehicle socket

Combo 2 vehicle socket

- ▶ Press the centre on the rear area of the socket flap ① and swivel the socket flap to the front.
The  indicator lamp ② and top status display ③ light up white.

- ⓘ The socket flap ① can also be opened via the multimedia system (→ page 253).

- ▶ Press catch ⑦ to the left and fold open socket cover ⑤.
- ⓘ only the connection ⑧ is required for the charging cable connector. Only open the upper part of the socket cap ⑤.
- ▶ For charging at a mains socket insert the mains plug into the mains socket of the external power source to the stop.
- ▶ **Flexible Charging System Pro:** if necessary, switch off protective earth detection and set maximum charge current (see operating instructions of the charging system).
- ▶ Fully insert the charging cable connector into vehicle socket ⑧. If the wallbox/charging station is not equipped with a charging cable, fully insert the plug of the vehicle's charging cable into the wallbox/charging station socket.
Make sure that the charging cable is not taut when inserted.
The  indicator lamp ④ and lower status display ③ flash orange and, as soon as the high-voltage battery is charged, green.

When the charging cable is connected to the vehicle, the vehicle cannot be started or moved.

At the start of the charging process, the charge level display is shown in the driver display with a charging prediction. The charging prediction is the point in time at which the high-voltage battery will be fully charged.

-  Depending on the temperature, the fan and battery cooling system may audibly switch on during the charging process.
-  If the vehicle is idle for lengthy periods and connected to the mains supply, the high-voltage battery will be recharged automatically as needed or when electrical consumers are activated (e.g. the pre-entry climate control).

Ending the alternating current charging process (mode 2/3)

 **DANGER** Risk of death when charging at a damaged socket

The charging process uses high voltage.

If the charging cable, the vehicle socket or the mains socket are damaged, you could receive an electric shock.

-  Only use an undamaged charging cable.
-  Avoid mechanical damage such as crushing, abrading or driving over the cable.
-  Have a damaged vehicle socket replaced at a qualified specialist workshop as soon as possible.
-  Never connect the charging cable to a damaged vehicle socket.

 **NOTE** Damage due to overheating of charging cable and charge port

During the charging process, the charging cable and charge port can heat up within the permissible limits.

The permissible limit values are influenced by the following factors:

- the power supply system and the charging cable are not damaged

- the instructions for handling the charging cable and the control element on the charging cable have been observed

-  If the charging cable or charge port becomes too hot, have the power supply system checked.

 **NOTE** Damaged or dirty vehicle socket when the socket flap is open

-  Always keep the socket cover and the socket flap closed when there is no charging cable connected. This protects the vehicle socket from dirt and damage.
-  Make sure that the socket cover is closed properly before closing the socket flap. This can otherwise result in damage which may prevent the socket flap from being opened again.

Requirements

- The vehicle is unlocked or the vehicle is locked and the distance between the key and the vehicle does not exceed 1 m.

- ⓘ Depending on the national version, the vehicle is equipped with one of the following vehicle sockets.

Combo 1 vehicle socket

- ▶ Press charging interruption button ③. The charging process is ended. The  indicator lamp ① lights up white. The vehicle socket is unlocked.

- ⓘ As an alternative, and only if the charging interruption button ③ is not working, you can unlock the vehicle using the vehicle key or centrally from inside to end the charging process. If the indicator lamp  ① then lights up white, the vehicle socket is unlocked for around 30 seconds.

- ⓘ The charging process can also be ended via the multimedia system (→ page 253).

- ▶ Press and hold button ② on the charging cable connector and remove the charging cable connector from the vehicle socket.

- ⓘ If you cannot remove the charging cable connector, repeat the unlocking procedure. If the charging cable connector is still locked, contact a qualified specialist workshop.

- ▶ Close the socket cover and the socket flap.
- ▶ Remove the charging cable connector from the mains socket, or from the socket on the wallbox/charging station, and stow the vehicle's charging cable safely in the vehicle (→ page 235).

Combo 2 vehicle socket

- ▶ Press charging interruption button ②. The charging process is ended. The  indicator lamp ① lights up white. The vehicle socket is unlocked.

i As an alternative, and only if the charging interruption button **2** is not working, you can unlock the vehicle using the vehicle key or centrally from inside to end the charging process. If the indicator lamp  **1** then lights up white, the vehicle socket is unlocked for around 30 seconds.

i The charging process can also be ended via the multimedia system (→ page 253).

▶ Remove the charging cable connector from the vehicle socket.

i If you cannot remove the charging cable connector, repeat the unlocking procedure. If the charging cable connector is still locked, contact a qualified specialist workshop.

▶ Close the socket cover and the socket flap.

▶ Remove the charging cable connector from the mains socket, or from the socket on the wallbox/charging station, and stow the vehicle's charging cable safely in the vehicle (→ page 235).

i The indicator lamp  **1** on the vehicle socket remains lit for some time before switching off.

Starting the direct current charging process (mode 4)

⚠ DANGER Risk of death when charging at a damaged socket

The charging process uses high voltage.

If the charging cable, the vehicle socket or the mains socket are damaged, you could receive an electric shock.

- ▶ Only use an undamaged charging cable.
- ▶ Avoid mechanical damage such as crushing, abrading or driving over the cable.
- ▶ Have a damaged vehicle socket replaced at a qualified specialist workshop as soon as possible.
- ▶ Never connect the charging cable to a damaged vehicle socket.

! **NOTE** Damage due to overheating of charging cable and charge port

During the charging process, the charging cable and charge port can heat up within the permissible limits.

The permissible limit values are influenced by the following factors:

- the power supply system and the charging cable are not damaged
- the instructions for handling the charging cable and the control element on the charging cable have been observed

▶ If the charging cable or charge port becomes too hot, have the power supply system checked.

! **NOTE** Damaged or dirty vehicle socket when the socket flap is open

▶ Always keep the socket cover and the socket flap closed when there is no

charging cable connected. This protects the vehicle socket from dirt and damage.

- ▶ Make sure that the socket cover is closed properly before closing the socket flap. This can otherwise result in damage which may prevent the socket flap from being opened again.

! **NOTE** Damage to the vehicle socket or the charging cable connector due to incorrect handling

Do not use excessive force (maximum 300 N) to fully insert the charging cable connector into the vehicle socket. You may otherwise damage the vehicle socket, the charging cable connector or their contacts.

- ▶ If you feel there is increased resistance, pull the charging cable connector out of the socket and reinsert it.

Requirements

- The transmission is in position **P**.

- The vehicle is unlocked or the vehicle is locked and the distance between the key and the vehicle does not exceed 1 m.
 - The vehicle has not been started.
 - The charging cable is not taut.
- i** Depending on the national version, the vehicle is equipped with one of the following vehicle sockets.

Combo 1 vehicle socket

Combo 2 vehicle socket

- ▶ Press the centre rear of the socket flap ① and swing the socket flap forwards. The indicator lamp ②  and upper status display ③ light up white.
- ① The socket flap ① can also be opened via the multimedia system (→ page 253).

- ▶ Press catch ⑦ to the left and fold open socket cover ⑤.
- ① Connections ⑥ and ⑧ are required for the CCS charging cable connector. Both sections of the socket cover must therefore be opened ⑤.
- ▶ Fully insert the CCS charging cable connector into the vehicle socket. Make sure that the charging cable is not taut when inserted.
The indicator lamp ④  and lower status display ③ flash orange, and green as soon as the high-voltage battery is being charged.

When the charging cable is connected to the vehicle, the vehicle cannot be started or moved.

At the start of the charging process, the charge level display is shown in the driver display with a charging prediction. The completion time either refers to the predicted charge level at the set departure time, or the time at which the high-voltage battery will be fully charged.

- ① Depending on the temperature, the fan and battery cooling system may audibly switch on during the charging process.
- ① If the vehicle is idle for lengthy periods and connected to the mains supply, the high-voltage battery will be recharged automatically as needed or when electrical consumers are activated (e.g. the pre-entry climate control).

Ending the direct current charging process (mode 4)

⚠ DANGER Risk of death when charging at a damaged socket

The charging process uses high voltage.

If the charging cable, the vehicle socket or the mains socket are damaged, you could receive an electric shock.

- ▶ Only use an undamaged charging cable.
- ▶ Avoid mechanical damage such as crushing, abrading or driving over the cable.

- ▶ Have a damaged vehicle socket replaced at a qualified specialist workshop as soon as possible.
- ▶ Never connect the charging cable to a damaged vehicle socket.

! **NOTE** Damage due to overheating of charging cable and charge port

During the charging process, the charging cable and charge port can heat up within the permissible limits.

The permissible limit values are influenced by the following factors:

- the power supply system and the charging cable are not damaged
- the instructions for handling the charging cable and the control element on the charging cable have been observed
- ▶ If the charging cable or charge port becomes too hot, have the power supply system checked.

! **NOTE** Damaged or dirty vehicle socket when the socket flap is open

- ▶ Always keep the socket cover and the socket flap closed when there is no charging cable connected. This protects the vehicle socket from dirt and damage.
- ▶ Make sure that the socket cover is closed properly before closing the socket flap. This can otherwise result in damage which may prevent the socket flap from being opened again.

Requirements

- The vehicle is unlocked or the vehicle is locked and the distance between the key and the vehicle does not exceed 1 m.
- i** Depending on the national version, the vehicle is equipped with one of the following vehicle sockets.

Combo 1 vehicle socket

- ▶ Press charging interruption button **3**. The charging process is ended. The **1** indicator lamp lights up white. The vehicle socket is unlocked.

i As an alternative, and only if the charging interruption button **3** is not working, you can unlock the vehicle using the vehicle key or centrally from inside to end the charging process. If the indicator lamp  **1** then lights up white, the vehicle socket is unlocked for around 30 seconds.

i The charging process can also be ended via the multimedia system (→ page 253).

▶ Press and hold button **2** on the charging cable connector and remove the charging cable connector from the vehicle socket.

i If you cannot remove the charging cable connector, unlock the vehicle and repeat the unlocking procedure. If the charging cable connector is still locked, contact a qualified specialist workshop.

▶ Close the socket cover and the socket flap.

Combo 2 vehicle socket

▶ Press charging interruption button **2**. The charging process is ended. The  indicator lamp **1** lights up white. The vehicle socket is unlocked.

i As an alternative, and only if the charging interruption button **2** is not working, you can unlock the vehicle using the vehicle key or

centrally from inside to end the charging process. If the indicator lamp  **1** then lights up white, the vehicle socket is unlocked for around 30 seconds.

i The charging process can also be ended via the multimedia system (→ page 253).

▶ Remove the charging cable connector from the vehicle socket.

i If you cannot remove the charging cable connector, unlock the vehicle and repeat the unlocking procedure. If the charging cable connector is still locked, contact a qualified specialist workshop.

▶ Close the socket cover and the socket flap.

i After the charging cable connector has been disconnected, the left  indicator lamp **1** on the vehicle socket remains lit for some time before switching off.

Function of the charge level display in the driver display

- i** The data shown in the illustration is example data.

- 1** Remaining range at current charge level
- 2** Current charge level of the high-voltage battery
- 3** Maximum charge level (as per the setting)
- 4** Expected end of charge or remaining time until fully charged (up to the selected maximum charge level).
- 5** Charge level recommended by the range assistant to reach the next destination

- 6** Dynamic charge level display
- 7** Current charging power

- i** The indicated remaining range **1** may vary due to various factors, e.g. driving style or topography.

When the vehicle is switched off and connected to the mains supply, the driver display shows the charge level display for approximately two minutes.

- i** The value of current charging power **7** can differ from the display on the charging station. At a charging power of 10 kW or higher, the value in the charge level display is rounded off and shown without a decimal place.

The value in **4** varies depending on the setting of the charging process. It displays the charging prediction, e.g. the time at which the selected charge level will be reached or the charge level at the pre-selected departure time.

Configures the charging settings

Multimedia system:

Setting the charging program

- ▶** Select **Home**, **Work** or **Standard**.

- i** When driving to a charging station the high-voltage battery of the vehicle is pretempered so that the maximum charging capacity can be called up at the charging station. In the central display the pretempering of the bat-

tery is marked with , and the maximum DC charging capacity until the optimum battery temperature is reached, in kW. The battery tempering is completed and the corresponding symbol faded out as soon as there are adequate battery temperature conditions. The display of the approved DC charging capacity is faded out as soon as the maximum charging capacity of the battery is reached, the driver interrupts the journey to the charging station or a charging plug is inserted at the vehicle.

- i** The range recharged during a charging process is marked in the central display with .
- i** Various influences may result in a reduction of the maximum charging capacity: through insufficient battery temperature , a current SOC range of the battery in which a reduced charging capacity may contribute to the durability of the battery  or through reduced charging capacity on the part of the charging station . Relevant information on current reduction influences on the charging capacity can be found on the adjacent information symbol.

You can watch an animation on this topic via the following link:

Open socket flap in the MBUX multimedia system

- ▶ **Open socket flap** to open the socket flap.

- ▶ The charging process can be interrupted using **Cancel charging**. The charging process is ended and the charging cable is unlocked.

- i** Further notes on charging with alternating current: (→ page 243) or direct current: (→ page 248).

Unlocking the charging cable (mode 3 or 4)

- i** When the function is active, the charging cable is unlocked when the maximum charge level is reached.

- ▶ Select **Home** or **Work**.
- ▶ Activate or deactivate **Unlock charging cable**.

Activating or deactivating location-based charging

- ▶ Select **Charging program, home** or **Charging program, work**.
- ▶ Activate or deactivate **Select based on location**.

When the function is activated, the vehicle's current position is saved as one of the selected options. When the address is reached again, the charging program is automatically switched over as soon as parking position **P** is engaged.

Sets the departure time

The set departure times are used for the vehicle's pre-entry climate control and for predictions regarding the approximate state of charge and range at the time selected.

DC charging: the charging process always starts without delay.

AC charging: if the ECO charging function is activated, the charging process pauses and is resumed as late as possible depending on the set charge level. The charging process is time-based.

- ▶ Select **Departure time**.

The following charging times can be selected:

- individual charging times
- a **Week profile**

Setting an individual departure time

- ▶ Select **Add new time** and set a new departure time.

or

- ▶ Select  and adapt an existing departure time.

Setting repeat days

- ▶ Select **Add new time** and set a new departure time.
- ▶ Mark the relevant weekdays for which the departure time will apply and confirm with **OK**.

or

- ▶ Select  and edit existing repeat days.

Setting a break in the charging process (alternating current only)

Up to four breaks in the charging process can be set during which the vehicle is not charged, even if it is connected to a charging station.

- ▶ Select **Charging interruptions**.
- ▶ Select **Add new time** and then set and save the times for the beginning and end of the break.
- ▶ Activate or deactivate the charging breaks that have been set.

Set charging breaks can be edited with the  button or deleted with the  button.

Parking

Parking the vehicle

⚠ WARNING Risk of accident and injury caused by an insufficiently secured vehicle rolling away

If the vehicle is not securely parked sufficiently, it can roll away in an uncontrolled way even at a slight downhill gradient.

- ▶ On uphill or downhill gradients, turn the front wheels so that the vehicle rolls towards the kerb if it starts moving.
- ▶ apply the parking brake.
- ▶ Switch the transmission to position **P**.

⚠ WARNING Accident- and risk of injury with unsupervised children in the vehicle

If you leave children unattended in the vehicle, they can in particular

- Open doors and thereby endanger other persons or road users.

- get out of the car and are hit by traffic.
- Operate vehicle equipment and become trapped, foreexample.

In addition, the children could also set the vehicle in motion, for exampleby:

- releasing the parking brake.
- change the gearbox setting.
- start the vehicle.

- ▶ Never leave children unattended in the vehicle.
- ▶ When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- ▶ Keep the key out of reach of children.

! NOTE Damage to the vehicle due to it rolling away

- ▶ Always secure the vehicle against rolling away.

- i** If you park the vehicle for a long period, observe the following notes:
- Make sure the high-voltage battery has a sufficient state of charge, especially at very low outside temperatures. That way, you can avoid any problems when subsequently starting the vehicle.
 - If possible, avoid parking spaces in direct sunlight.

Observe the notes on charging the high-voltage battery (→ page 232).

- ▶ Bring the vehicle to a standstill by depressing the brake pedal.
- ▶ On uphill or downhill gradients, turn the front wheels so that the vehicle will roll towards the kerb if it starts moving.
- ▶ Apply the electric parking brake.

- ▶ Engage transmission position **P** in a stationary vehicle with the brake pedal applied (→ page 230).
 - ▶ Switch off the vehicle by pressing button **1**.
 - ▶ Release the service brake slowly.
 - ▶ Get out of the vehicle and lock it.
- i** When you park the vehicle, you can still operate the side windows and the panoramic sliding sunroof for approximately four minutes if the driver's door is closed.

Garage door opener

Programming buttons for the garage door opener

⚠ WARNING Risk of injury by becoming trapped when opening and closing a garage door

When you operate or program a garage door with an integrated garage door opener, persons can become trapped or struck by the

garage door if they stand within its range of movement.

- ▶ Always make sure that nobody is within the range of the garage door's movement.

Before programming the garage door opener, park the vehicle outside the garage. Make sure that the vehicle is switched on but not started.

Requirements

- The vehicle has been parked outside the garage or outside the range of movement of the door.
 - The vehicle is switched on.
 - The vehicle has not been started.
- i** The garage door opener function is always available when the vehicle is switched on.

- ▶ Press and hold button ①, ② or ③ that you wish to program. Indicator lamp ④ flashes yellow.

i It can take up to 20 seconds before the indicator lamp flashes yellow.

- ▶ Release the previously pressed button. Indicator lamp ④ continues to flash yellow.

- ▶ Point remote control ⑤ from a distance of 1 cm to 8 cm towards button ①, ② or ③.
 - ▶ Press and hold button ⑥ of remote control ⑤ until one of the following signals appears:
 - Indicator lamp ④ lights up green continuously. Programming is complete.
 - Indicator lamp ④ flashes green. Programming was successful. Additionally, synchronisation of the rolling code with the door system must be carried out.
 - ▶ If indicator lamp ④ does not light up or flash green: repeat the procedure.
 - ▶ Release all of the buttons.
- i** The remote control for the door drive is not included in the scope of delivery of the garage door opener.

Synchronising the rolling code

⚠ WARNING Risk of injury by becoming trapped when opening and closing a garage door

When you operate or program a garage door with an integrated garage door opener, persons can become trapped or struck by the garage door if they stand within its range of movement.

▶ Always make sure that nobody is within the range of the garage door's movement.

Before programming the garage door opener, park the vehicle outside the garage. Make sure that the vehicle is switched on but not started.

Requirements

- The door system uses a rolling code.
- The vehicle must be within range of the garage door or door drive.
- The vehicle as well as persons and objects are located outside the range of movement of the door.

i The garage door opener function is always available when the vehicle is switched on.

▶ Press the programming button on the door drive unit. Initiate the next step within approximately 30 seconds.

▶ Press previously programmed button **1**, **2** or **3** repeatedly until the door closes. When the door closes, programming is completed.

i Please also read the operating instructions for the door drive.

Troubleshooting when programming the remote control

⚠ WARNING Risk of injury by becoming trapped when opening and closing a garage door

When you operate or program a garage door with an integrated garage door opener, persons can become trapped or struck by the garage door if they stand within its range of movement.

▶ Always make sure that nobody is within the range of the garage door's movement.

Before programming the garage door opener, park the vehicle outside the garage. Make sure that the vehicle is switched on but not started.

- i** The garage door opener is always available when the vehicle is switched on.

- ▶ Check if the transmitter frequency of the remote control **5** is supported.
- ▶ Replace the batteries in the remote control **5**.
- ▶ Hold remote control **5** at various angles from a distance of 1 cm to 8 cm front of the inside rearview mirror. You should test every position for at least 25 seconds before trying another position.
- ▶ Hold remote control **5** at the same angles at various distances in front of the rearview mir-

ror. You should test every position for at least 25 seconds before trying another position.

- ▶ Press the button **6** on the remote control **5** again before transmission ends on remote controls that transmit only for a limited period.
- ▶ Angle the aerial line of the garage door opener unit towards the remote control.

- i** It is possible that older garage doors cannot be operated using the remote control in the inside rearview mirror even after you have successfully performed the measures described above. If this is the case, contact the HomeLink® Hotline.
- i** Support and additional programming information:
- with the HomeLink® Hotline on (0) 0800 046 635 465 or +49 (0) 7132 3455 733 (chargeable)
 - on the Internet at <https://www.homelink.com>

Opening or closing the garage door

⚠ WARNING Risk of injury by becoming trapped when opening and closing a garage door

When you operate or program a garage door with an integrated garage door opener, persons can become trapped or struck by the garage door if they stand within its range of movement.

- ▶ Always make sure that nobody is within the range of the garage door's movement.

Before programming the garage door opener, park the vehicle outside the garage. Make sure that the vehicle is switched on but not started.

Requirements

- The corresponding button is programmed to operate the door.
- i** The garage door opener function is always available when the vehicle is switched on.

- ▶ Press and hold buttons ①, ② or ③ until the door opens or closes.
- ▶ If the indicator lamp ④ flashes yellow after approx. 20 seconds: Press the previously pressed button again and keep it pressed until the door opens or closes.

Clearing the garage door opener memory

⚠ WARNING Risk of injury by becoming trapped when opening and closing a garage door

When you operate or program a garage door opener, persons can become trapped or struck by the garage door if they stand within its range of movement.

- ▶ Always make sure that nobody is within the range of the garage door's movement.

Before programming the garage door opener, park the vehicle outside the garage. Make sure that the vehicle is switched on but not started.

- ① The garage door opener function is always available when the vehicle is switched on.

- ▶ Press and hold buttons ① and ③. Indicator lamp ④ lights up yellow.
- ▶ If indicator lamp ④ flashes green: release buttons ① and ③. The entire memory has been deleted.

Electric parking brake

Function of the electric parking brake (applying automatically)

⚠ WARNING Accident- and risk of injury with unsupervised children in the vehicle

If you leave children unattended in the vehicle, they can in particular

- Open doors and thereby endanger other persons or road users.
- get out of the car and are hit by traffic.
- Operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:

- releasing the parking brake.
- change the gearbox setting.
- start the vehicle.

▶ Never leave children unattended in the vehicle.

- ▶ When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- ▶ Keep the key out of reach of children.

The electric parking brake is applied if the transmission is in position **P** and one of the following conditions is fulfilled:

- The vehicle is switched off.
- The seat belt tongue is not inserted in the seat belt buckle of the driver's seat and the driver's door is opened.

i To prevent application: pull the handle of the electric parking brake (→ page 262).

In the following situations, the electric parking brake is also applied:

- The HOLD function is keeping the vehicle stationary.
- Active Parking Assist is keeping the vehicle stationary.
- Active Distance Assist DISTRONIC is bringing the vehicle to a standstill.

• In addition, one of the following conditions must be fulfilled:

- The vehicle is switched off.
- The seat belt tongue is not inserted in the seat belt buckle of the driver's seat and the driver's door is opened.
- There is a system malfunction.
- The power supply is insufficient.
- The vehicle is stationary for a lengthy period.

When the electric parking brake is applied, the red indicator lamp **(P)** lights up in the driver display.

Function of the electric parking brake (releasing automatically)

The electric parking brake is released when the following conditions are fulfilled:

- The driver's door is closed.
- The vehicle has been started.
- The transmission is in position **D** or **R** and you depress the accelerator pedal, or you shift

from transmission position **P** to **D** or **R** on level ground.

- If the transmission is in position **R**, the tail-gate must be closed.
- The seat belt tongue is inserted into the seat belt buckle of the driver's seat.

If the seat belt tongue is not inserted into the seat belt buckle of the driver's seat, one of the following conditions must be fulfilled:

- You shift from transmission position **P**.
- or
- You have previously driven at speeds greater than 3 km/h.

When the electric parking brake is released, the red **(P)** indicator lamp in the driver display goes out.

Applying/releasing the electric parking brake manually

⚠ WARNING Accident- and risk of injury with unsupervised children in the vehicle

If you leave children unattended in the vehicle, they can in particular

- Open doors and thereby endanger other persons or road users.
- get out of the car and are hit by traffic.
- Operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:

- releasing the parking brake.
- change the gearbox setting.
- start the vehicle.

- ▶ Never leave children unattended in the vehicle.
- ▶ When leaving the vehicle, always take the SmartKey with you and lock the vehicle.

- ▶ Keep the key out of reach of children.

Applying

- ▶ Push handle **1**. The red **(P)** indicator lamp lights up in the driver display.

- ⓘ The electric parking brake is only securely applied if the red  indicator lamp is lit continuously.

Releasing

- ▶ Switch on the vehicle.
- ▶ Pull handle . The red  indicator lamp in the driver display goes out.

Emergency braking

- ▶ Press and hold handle . As long as the vehicle is in motion, the **Release parking brake** message is displayed and the red  indicator lamp flashes. When the vehicle has been braked to a standstill, the electric parking brake is applied. The

- ▶ red  indicator lamp lights up in the driver display.

Information on collision detection on a parked vehicle

If a collision is detected on the locked vehicle when towing protection is switched on, and the collision detection is switched on, when the vehicle is switched on, you will receive a message in the multimedia system.

You will receive information about the following points:

- The area of the vehicle that may have been damaged.
- The force of the impact.

The following situation can lead to inadvertent activation:

- Foreexample, the parked vehicle is moved to a two-storey garage.

- ⓘ Deactivate tow-away protection to prevent accidental activation. If you deactivate tow-away protection, collision detection will also be deactivated.

You can permanently deactivate collision detection via the multimedia system (→ page 264).

System limits

Detection may be restricted in the following situations:

- the vehicle is damaged without impact, for example, if an outside mirror is torn off or the paint is damaged by a key
 - an impact occurs at low speed
 - the electric parking brake is not applied
- ⓘ You are responsible for your vehicle. Convince yourself that your vehicle is free of damage and roadworthy.

Setting collision detection for a parked vehicle

Multimedia system:

→  » Settings » Vehicle
 » Open/close » Vehicle protection

- ▶ Activate or deactivate the function via **Collision notification**.

- ⓘ A maximum of three incidents can be registered. Up to 15 photos are taken for every incident. In the event of another incident, the photos of the first incident will be overwritten if they have not been deleted already.

Activating or deactivating the collision photos function

Please note that legal restrictions regarding automatic recording of the vehicle surroundings may be in place in certain countries.

- ▶ Activate or deactivate **Collision photos**.

Transferring the collision photos with the Mercedes me app

- ▶ Select **Upload collision photos**.
- ▶ Select **Upload automatically**.

- ▶ Scan the generated QR code on the media display with the Mercedes me app. The encrypted collision photos will then be uploaded to Mercedes me.

- ⓘ Any device that can scan QR codes can be used to view the collision photos in the Mercedes me app.

Copying the collision photos to a USB flash drive

- ▶ Connect a USB flash drive (→ page 480).
- ▶ Select **Manage collision photos**.
- ▶ Select **Copy (USB)**.
All collision photos are copied to the USB flash drive.

- ⓘ Only use FAT32 or exFAT formatted USB storage devices to ensure secure operation.

Deleting collision photos

- ▶ Select **Manage collision photos**.
- ▶ Select **Delete**.
All collision photos are deleted.

Driving and driving safety systems

Driving systems and your responsibility

Your vehicle is equipped with driving systems which assist you in driving, parking and manoeuvring the vehicle. The driving systems are only aids. They are not a substitute for you paying attention to your surroundings and do not relieve you of your responsibility pertaining to road traffic law. The driver is always responsible for maintaining a safe distance to the vehicle in front, for vehicle speed, for braking in good time and for staying in lane. Pay attention to the traffic conditions at all times and intervene when necessary. Be aware of the limitations regarding the safe use of these systems.

Driving systems can neither reduce the risk of accident if you fail to adapt your driving style nor override the laws of physics. They cannot always take into account road, weather or traffic conditions.

- ① Some driving systems can regulate or limit the speed to a previously set value. Draw attention to the stored speed when changing drivers.

Information on vehicle sensors and cameras

Some driving and driving safety systems use cameras as well as radar or ultrasonic sensors to monitor the area in front of, behind or next to the vehicle.

- ① Multifunction camera
- ② Cameras in the outside mirrors

- ③ Front radar
- ④ Front camera
- ⑤ Corner radars
- ⑥ Ultrasonic sensors
- ⑦ Reversing camera

⚠ WARNING Risk of accident due to restricted detection performance of vehicle sensors and cameras

If the area around vehicle sensors or cameras is covered, damaged or dirty, certain driving and safety systems cannot function correctly. There is a risk of an accident.

- ▶ Keep the area around vehicle sensors or cameras clear of any obstructions and clean.
- ▶ Have damage to the bumper, radiator grille or stone chipping in the area of the front and rear windows repaired at a qualified specialist workshop.

Particularly, keep the areas around the sensors and cameras free of dirt, ice or slush

(→ page 504). The sensors and cameras must not be covered and the detection ranges around them must be kept free. Do not attach additional licence plate brackets, advertisements, stickers, foils or foils to protect against stone chippings in the detection range of the sensors and cameras. Make sure there are no overhanging loads protruding into the detection range.

If there is damage to a bumper or the radiator grille, or after an impact, have the function of the sensors checked at a qualified specialist workshop. Have damage or stone chipping in the area of the cameras on the front and rear windows repaired at a qualified specialist workshop.

i The reversing camera can extend and retract automatically for the purpose of calibration, even though there is no camera image in the display.

Overview of driving systems and driving safety systems

- ABS (→ page 267)
- BAS (→ page 267)

- ESP® (→ page 267)
- ESP® Crosswind Assist (→ page 268)
- ESP® trailer stabilisation (→ page 268)
- EBD (→ page 269)
- STEER CONTROL (→ page 269)
- HOLD function (→ page 270)
- Hill Start Assist (→ page 271)
- Adaptive Brake Lights (→ page 271)
- ATTENTION ASSIST (→ page 272)
- Cruise control (→ page 273)
- Limiter (→ page 274)
- Speed Limit Assist (country-dependent) (→ page 293)

- Traffic light view (→ page 301)
- Suspension with adaptive damping adjustment (→ page 306)

Driving Assistance Package

i The following functions are part of the Driving Assistance Package. Certain functions are

only available in some countries. Some functions are also available without the Driving Assistance Package, albeit with restricted functionality.

- Active Distance Assist DISTRONIC (→ page 277)
- Active Speed Limit Assist (→ page 283)
- Route-based speed adaptation (→ page 283)
- Active Brake Assist (→ page 289)
- Active Steering Assist (→ page 285)
- Active Emergency Stop Assist (→ page 287)
- Blind Spot Assist with exit warning (→ page 302)
- Active Lane Keeping Assist (→ page 304)

Parking Package

i The availability of individual functions depends on country and equipment.

- Reversing camera (→ page 306)
- 360° Camera (→ page 310)
- Parking Assist PARKTRONIC (→ page 314)
- Active Parking Assist (→ page 318)

Function of ABS

The Anti-lock Brake System (ABS) regulates the brake pressure in critical driving situations:

- During braking, for instance, at maximum full-stop braking or if there is insufficient tyre traction, the wheels are prevented from locking.
- Vehicle steerability while braking is ensured.

If ABS intervenes when braking, you will feel a pulsing in the brake pedal. The pulsating brake pedal can be an indication of hazardous road conditions and can serve as a reminder to take extra care while driving.

System limits

- ABS is active from speeds of approximately 5 km/h.
- ABS may be impaired or may not function if a malfunction has occurred and the yellow  ABS warning lamp lights up continuously after the vehicle is started.

Function of BAS

⚠ WARNING Risk of an accident caused by a malfunction in BAS (Brake Assist System)

If BAS is malfunctioning, the braking distance in an emergency braking situation is increased.

▶ Depress the brake pedal with full force in emergency braking situations. ABS prevents the wheels from locking.

The Brake Assist System (BAS) supports your emergency braking situation with additional brake force.

If you depress the brake pedal quickly, BAS is activated:

- BAS automatically boosts the brake pressure.
- BAS can shorten the braking distance.
- ABS prevents the wheels from locking.

The brakes will function as usual once you release the brake pedal. BAS is deactivated.

Function of ESP®

⚠ WARNING Risk of skidding if ESP® is deactivated

If you deactivate ESP®, ESP® cannot carry out vehicle stabilisation.

▶ ESP® should only be deactivated in the following situations.

The Electronic Stability Program (ESP®) can monitor and improve driving stability and traction in the following situations within physical limits:

- When pulling away on wet or slippery carriageways.
- When braking.

If the vehicle deviates from the direction desired by the driver, ESP® can stabilise the vehicle by intervening in the following ways:

- One or more wheels are braked.
- The drive system output is adapted according to the situation.

When ESP® is deactivated, the  warning lamp lights up continuously:

- Driving stability will no longer be improved.
- The drive wheels could spin.
- ETS/4ETS traction control is still active.

 When ESP® is deactivated, you are still assisted by ESP® when braking.

When the  warning lamp flashes, one or several wheels has reached its grip limit:

- Adapt your driving style to suit the current road and weather conditions.
- Do not deactivate ESP®.
- Only depress the accelerator pedal as far as is necessary when pulling away.

Deactivate ESP® in the following situations to improve traction:

- When using snow chains.
- In deep snow.
- On sand or gravel.

 Spinning the wheels results in a cutting action, which enhances traction.

If the  warning lamp lights up continuously, ESP® is not available due to a malfunction.

Observe the following information:

- warning and indicator lamps (→ page 739)
- Display messages (→ page 675)

ETS/4ETS

ETS/4ETS traction control (Electronic Traction System) is part of ESP® and makes it possible to pull away and accelerate on a slippery carriage-way.

ETS/4ETS can improve the vehicle's traction by intervening in the following ways:

- The drive wheels are braked individually if they spin.
- More drive torque is transferred to the wheel or wheels with traction.

Influence of drive programs on ESP®

The drive programs enable ESP® to adapt to different weather and road conditions as well as the

driver's preferred driving style. Depending on the selected drive program, the appropriate ESP(→ page 227)® mode will be activated.

Function of ESP® Crosswind Assist

ESP® Crosswind Assist detects sudden gusts of side wind and helps the driver to keep the vehicle in the lane:

- ESP® Crosswind Assist is active at vehicle speeds between approx. 80 km/h and 200 km/h when driving straight ahead or cornering slightly.
- The vehicle is stabilised by means of individual brake application on one side.

Function of ESP® trailer stabilisation

 **WARNING** Risk of accident in poor road and weather conditions

In poor road and weather conditions, the trailer stabilisation cannot prevent lurching of

the vehicle/trailer combination. Trailers with a high centre of gravity may tip over before ESP® detects this.

- ▶ Always adapt your driving style to suit the current road and weather conditions.

When driving with a trailer, ESP® can stabilise your vehicle if the trailer begins to swerve from side to side:

- ESP® trailer stabilisation is active above speeds of 65 km/h.
- Slight swerving is reduced by means of a targeted, individual brake application on one side.
- In the event of severe swerving, the operating energy output is also reduced and all wheels are braked.

ESP® trailer stabilisation may be impaired or may not function if:

- The trailer is not connected correctly or is not detected properly by the vehicle.

Activating / deactivating ESP® (Electronic Stability Program)

Multimedia system:

- ⓘ ESP® can only be activated/deactivated using quick access when at least one other function is available in quick access. ESP® can otherwise be found in the [Assistance](#) menu.

- ▶ Select **ESP**.
- ▶ Select **On** or **Off**.

If the ESP® OFF  warning lamp lights up continuously, ESP® is deactivated.

Note the information on warning lamps and display messages that may appear in the driver display.

Function of EBD

Electronic Brakeforce Distribution (EBD) is characterised by the following:

- Monitoring and regulating the brake pressure on the rear wheels.

- Improved driving stability when braking, especially on bends.

Function of STEER CONTROL

STEER CONTROL assists you by transmitting a noticeable steering force to the steering wheel in the direction required for vehicle stabilisation.

This steering recommendation is given in the following situations:

- both right wheels or both left wheels are on a wet or slippery road surface when you brake
- the vehicle starts to skid

System limits

STEER CONTROL may be impaired or may not function in the following situations:

- ESP® is deactivated.
- ESP® is malfunctioning.
- The steering is malfunctioning.

If ESP® is malfunctioning, you will be assisted further by the power steering.

HOLD function

HOLD function

The HOLD function holds the vehicle at a standstill without requiring you to depress the brake pedal, e.g. while waiting in traffic.

The HOLD function is only an aid. The responsibility for the vehicle safely standing still remains with the driver.

System limits

The HOLD function is only intended to provide assistance when driving and is not a sufficient means of safeguarding the vehicle against rolling away when stationary.

- The incline must not be greater than 30%.

Activating/deactivating the HOLD function

⚠ WARNING Risk of an accident due to the HOLD function being active when you leave the vehicle

If the vehicle is only braked with the HOLD function it could, in the following situations, roll away:

- If there is a malfunction in the system or in the power supply.
- If the HOLD function is deactivated by depressing the accelerator pedal or brake pedal, e.g. by a vehicle occupant.

▶ Always secure the vehicle against rolling away before you leave it.

Requirements

- The vehicle is stationary.
- The driver's door is closed or the seat belt on the driver's side is fastened.
- The vehicle has been started.
- The electric parking brake is released.

- Active Distance Assist DISTRONIC is deactivated.
- The transmission is in position **D**, **R** or **N**.

Activating the HOLD function

- ▶ Depress the brake pedal, and after a short time quickly depress further until the **HOLD** display appears in the driver's display.
- ▶ Release the brake pedal.

Deactivating the HOLD function

- ▶ Depress the accelerator pedal to pull away. or
- ▶ Depress the brake pedal until the **HOLD** display disappears from the driver's display.

The HOLD function is deactivated in the following situations:

- Active Distance Assist DISTRONIC is activated.
- The transmission is shifted to position **P**.
- The vehicle is secured with the electric parking brake.

In the following situations, the vehicle is held by transmission position **P** and/or by the electric parking brake:

- The seat belt is unfastened and the driver's door is opened.
- The vehicle is switched off.
- There is a system malfunction.
- The power supply is insufficient.

In addition, the **Brake immediately** message may appear in the driver's display and a horn tone may sound at regular intervals.

- ▶ Immediately depress the brake pedal firmly until the warning message disappears. The HOLD function is deactivated.
- ▶ Additionally secure the vehicle against rolling away.

Intelligent crawl function

The intelligent crawler mode assists you when pulling away, manoeuvring and parking on uphill or downhill inclines. When the brake pedal is released, the vehicle rolls in the direction of the

engaged transmission position. The crawler torque is adapted to the uphill incline.

In recuperation level **D** **AUTO** (→ page 222) the intelligent crawler mode also assists you up to speeds of approximately 20 km/h, by following the vehicle in front at approximately the same speed.

The intelligent crawler mode is only an aid. The driver is responsible for maintaining a sufficient distance to the vehicle in front.

System limits

The intelligent crawler mode does not automatically stop the vehicle if the vehicle in front stops. Bring the vehicle to a standstill using the brake pedal.

Function of Hill Start Assist

⚠ WARNING Risk of accident and injury due to the vehicle rolling away

After a short time, Hill Start Assist no longer holds the vehicle.

▶ Swiftly move your foot from the brake pedal to the accelerator pedal. Do not leave the vehicle when it is being held by Hill Start Assist.

Hill Start Assist holds the vehicle for a short time when pulling away on a hill under the following conditions:

- The transmission is in position **D** or **R**.
- The electric parking brake is released.

This gives you enough time to move your foot from the brake pedal to the accelerator pedal and depress it before the vehicle begins to roll away.

Function of Adaptive Brake Lights

Adaptive Brake Lights warn following traffic in an emergency braking situation with the following actions:

- flashing the brake lamps
- activating the hazard warning lights (→ page 39)

If the vehicle is braked sharply from speeds above 50 km/h, the brake lamps flash rapidly. This provides traffic travelling behind you with an even more noticeable warning.

ATTENTION ASSIST

Function of ATTENTION ASSIST

ATTENTION ASSIST assists you on long, monotonous journeys, e.g. on motorways and trunk roads. If indicators of fatigue or increasing lapses in concentration on the driver's part are detected, the system suggests taking a break.

ATTENTION ASSIST is only an aid. It cannot always detect fatigue or lapses in concentration in time. The system is not a substitute for a well-rested and attentive driver. On long journeys, take regular breaks in good time that allow for adequate recovery.

You can choose between two settings:

- **Standard:** normal system sensitivity.
- **Sensitive:** higher system sensitivity. The driver was warned earlier, and the attention level

detected by ATTENTION ASSIST has adapted accordingly.

If drowsiness or increasing lapses in concentration are detected, the **ATTENTION ASSIST: Take a break!** warning appears on the driver's display. You can acknowledge the message and take a break where necessary. If you do not take a break and ATTENTION ASSIST continues to detect increasing lapses in concentration, you will be warned again after a minimum of 15 minutes.

The following information is displayed in the driver's display:

- The length of the journey since the last break

- the attention level determined by ATTENTION ASSIST

The more segments ① of the circle displayed, the higher the detected attention level. Fewer segments ① are displayed in the circle as the attention level decreases.

If the ATTENTION ASSIST is unable to calculate the attention level and cannot issue a warning, the **System suspended** message appears.

If the driver display shows a warning, a service area search is offered in the MBUX multimedia system. You can select a rest area and start navigation to this rest area.

When you restart the vehicle, ATTENTION ASSIST is automatically switched on. The last selected sensitivity level remains stored.

System limits

ATTENTION ASSIST is active in the 60 km/h to 200 km/h speed range.

If the system is unavailable due to a fault, the ATTENTION ASSIST  warning light continuously illuminates the driver display.

Particularly in the following situations, ATTENTION ASSIST only functions in a restricted manner and warnings may be delayed or not occur:

- If you have been driving for less than approximately 30 minutes.
- If the road condition is poor (uneven road surface or potholes).
- If there is a strong side wind.
- If you adopt a sporty driving style (high cornering speeds or high acceleration rates).
- If the Steering Assist function of Active Distance Assist DISTRONIC is active.
- If the clock is set to the incorrect time.
- If you change lanes and vary your speed frequently in active driving situations.

Also, observe any information regarding display messages that can be displayed in the driver's display.

The ATTENTION ASSIST drowsiness or alertness assessment is reset and restarted when continuing the journey in the following situations:

- You switch off the vehicle.

- If you unfasten your seat belt and open the driver's door (e.g. to change drivers or take a break).

Setting ATTENTION ASSIST

Multimedia system:

  **Settings**  **Assistance**
 **Assistance**  **ATTENTION ASSIST**

Setting the sensitivity

- ▶ Select  next to **ATTENTION ASSIST**.
- ▶ Select **Standard** or **Sensitive**.

Cruise control and limiter

Function of cruise control

Cruise control regulates the speed to the value selected by the driver.

Forexample, the stored speed is not deleted if you accelerate to overtake. If you remove your foot from the accelerator pedal after overtaking, cruise control will resume speed regulation back to the stored speed.

You can store any speed above 20 km/h up to the maximum design speed or up to the set winter tyre limit. In the drive program , the adjustable speed is limited to 130 km/h.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognise dangers (→ page 265).

Displays in the driver's display

-  **Grey:** cruise control is selected but not yet active or temporarily passive.
-  **Green:** cruise control is active.

A stored speed appears under the  display and is indicated in the speedometer.

System limits

Cruise control may be unable to maintain the stored speed on uphill gradients. The stored speed is resumed when the gradient evens out.

Increase recuperation in good time on long and steep downhill gradients. Take particular note of this when driving a laden vehicle. Doing so will use the electric motor's braking effect to charge the high-voltage battery. This relieves the load on

the brake system and prevents the brakes from overheating and wearing too quickly.

Do not use cruise control in the following situations:

- In traffic situations which require frequent changes of speed, e.g. in heavy traffic, on winding roads
- , and slippery roads. Accelerating can cause the drive wheels to lose traction, and the vehicle could skid.
- when visibility is poor

Function of the limiter

The limiter restricts the speed of the vehicle. To reduce the speed to the set speed, the limiter applies the brakes automatically.

You can limit the speed as follows:

- **Variable:** for short-term limitation of the driving speed, e.g. in built-up areas
- **Permanent:** for a longer-term speed restriction, e.g. in winter tyre mode

You can store any speed above 20 km/h up to the maximum design speed or up to the set winter

tyre limit. You can also perform settings while the vehicle is stationary if the vehicle has been started.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognise dangers (→ page 265).

Displays in the driver's display

Grey: variable limiter is selected but not yet activated.

Flashing grey: variable limiter is temporarily passive.

Green: variable limiter is activated.

A stored speed appears under the display and is indicated in the speedometer.

If you depress the accelerator pedal beyond the pressure point (kickdown), the variable limiter switches to passive mode. The message **passive** appears in the driver's display, and the indicator flashes.

The variable limiter is reactivated in the following situations:

- If the vehicle speed drops below the stored speed.
- If the stored speed is called up.
- If you store a new speed.

Operating cruise control or the variable limiter

WARNING Risk of accident due to stored speed

If you call up the stored speed and this is lower than your current speed, the vehicle decelerates.

Take into account the traffic situation before calling up the stored speed.

Requirements

Cruise control

- Cruise control is selected.
- ESP® must be activated, but not intervening.
- The vehicle speed is at least 20 km/h.

- The transmission is in position **D**.

Variable limiter

- The variable limiter is selected.

Steering wheel control panel for cruise control and variable limiter

RES/Ⓜ

Adopts the stored/detected speed

CANCEL

Deactivates cruise control/the variable limiter

① SET+ SET- Control panel to increase/decrease speed

Ⓜ

Selects cruise control

LIM

Selects the variable limiter

Operating cruise control and the variable limiter:

- ▶ Press the corresponding button with only one finger or swipe on the control panel.

Switching between cruise control and the variable limiter

- ▶ To select cruise control: press **Ⓜ**.

- ▶ To select the variable limiter: press **LIM**.

- ⓘ Vehicles with Active Distance Assist DISTRONIC: the variable limiter is selected by a different button (→ page 279).

Activating cruise control or the variable limiter

- ▶ Press **SET+** or **SET-** on the control panel ①. The current travel speed is stored and maintained by the vehicle's cruise control, or is restricted by the variable limiter.

or

- ▶ Press **RES/Ⓜ**.

The last stored speed is called up and maintained by the vehicle's cruise control, or is restricted by the variable limiter.

If the last stored speed has previously been deleted, the current vehicle speed is stored.

- ⓘ When you switch off the vehicle, the last speed stored is deleted.

When you activate cruise control or Active Distance Assist DISTRONIC, the last speed stored for the variable limiter is deleted.

Increasing/decreasing the stored speed

- ▶ To increase the stored speed: swipe upwards from the bottom of control panel ①.
 - The stored speed is increased by 1 km/h.
- ▶ To decrease the stored speed: swipe downwards from the top of control panel ①.
 - The stored speed is decreased by 1 km/h.

or

▶ Briefly press **SET+** or **SET-** on the control panel **1**.
The stored speed is increased or decreased to the next increment of ten (e.g. to 50 km/h or 60 km/h).

or

▶ Press and hold **SET+** or **SET-** on the control panel **1**.
The stored speed is increased or decreased to the next increment of ten and afterwards by increments of 10 km/h.

or

▶ Accelerate the vehicle to the desired speed.
▶ Press **SET+** on the control panel **1**.

i When the variable limiter is switched to passive mode, you cannot increase or decrease its stored speed in increments of 1 km/h.

Adopting a detected speed

If cruise control/variable limiter is activated and Traffic Sign Assist has detected a speed restriction sign with a maximum permissible speed and this is displayed in the driver's display:

▶ Press **RES/Ⓜ**.
The maximum permissible speed shown by the traffic sign is stored and the vehicle maintains or does not exceed this speed.

Deactivating cruise control or the variable limiter

▶ Press **CANCEL**.

i If you brake, deactivate ESP[®] or if ESP[®] intervenes, cruise control is deactivated. The variable limiter is not deactivated.

i When you switch off the vehicle, the last speed stored is deleted.
When you activate cruise control or Active Distance Assist DISTRONIC, the last speed stored for the variable limiter is deleted.

Information on the permanent limiter

If the vehicle should never exceed a specific speed (e.g. for driving in winter tyre mode), you can set this speed with the permanent limiter.

You do this by limiting the speed between 160 km/h and 240 km/h in the multimedia system (→ page 35).

The permanent limiter has no effect if you limit the speed to a value above the vehicle's maximum speed, which can be driven or top design speed.

Shortly before the set speed is reached, it appears on the driver's display. When you confirm the message, display messages no longer appear until you switch off the vehicle. The speed will only be displayed again once the vehicle has been restarted or if the set speed is changed.

The permanent limiter does not switch to passive mode even during kickdown and the driven speed remains below the set speed.

Setting the speed limit for winter tyres

Multimedia system:

➔ **Home** ➔ **Settings** ➔ **Vehicle** ➔ **Driving**
➔ **Winter tyre limit**

▶ Activate or deactivate **Winter tyre limit**.

Setting a speed

▶ Select **Winter tyre limit**.
▶ Select a speed.

Active Distance Assist DISTRONIC

Function of Active Distance Assist DISTRONIC

- ① The Active Distance Assist DISTRONIC described for vehicles without the Driving Assistance Package is an on-demand feature (country-dependent) (→ page 67).

Active Distance Assist DISTRONIC maintains the set speed on free-flowing roads. If vehicles are detected ahead the set distance is maintained, if necessary until the vehicle comes to a standstill. The vehicle accelerates or brakes depending on the distance to the vehicle in front and the set speed.

The speed and distance to the vehicle in front are set and saved using the steering wheel.

Available speed range: 20 km/h - 160 km/h

The adjustable set speed can vary due to the following factors:

- drive program selected **E** (→ page 226)
- stored speed restriction, e.g. winter tyre limit (→ page 276)

Other features of Active Distance Assist DISTRONIC:

- Adjusts the driving style depending on the selected drive program (energy-saving, comfortable or dynamic) (→ page 226)
- Initiates acceleration to the stored speed if the turn signal indicator is switched on to change to the overtaking lane
- **Vehicles with Driving Assistance Package:**
 - Reacts to stationary vehicles detected in urban speed ranges (except bicycles and motorcycles)
 - Takes one-sided overtaking restrictions into account on motorways or multi-lane roads with separate carriageways (country-dependent)

If the vehicle is braked to a standstill by Active Distance Assist DISTRONIC on multi-lane separated roadways, it can automatically follow the vehicle in front as it moves off again, depending on the equipment. If a critical situation is detected when driving off, a visual and acoustic warning is issued indicating that the driver must now take

control of the vehicle. The vehicle is not accelerated any further.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognise potential dangers (→ page 265).

Display in the driver display in the **Assistance** menu

- ① Vehicle in front
- ② Distance indicator
- ③ Set specified distance

The vehicle detected in front ① is highlighted in green. It may also be in the lane to the right of your vehicle in situations where it is not permitted

to overtake on the left, for example, on UK motorways.

Permanent status display

Grey: Active Distance Assist DISTRONIC selected but not yet active

Green speedometer, grey vehicle: Active Distance Assist DISTRONIC active, speed set

Green: Active Distance Assist DISTRONIC active and vehicle detected

The stored speed is shown under the permanent status display and highlighted on the speedometer. Active Distance Assist DISTRONIC's status display is greyed out when in passive mode.

If the speed of the vehicle in front or the speed adjustment is less than the stored speed due to the route event ahead, the segments in the speedometer light up.

If you increase or decrease the specified distance , the  display appears briefly.

 On motorways or high-speed major roads, the green vehicle symbol  is displayed cyclically when the vehicle is ready to pull away.

 The system is switched to passive mode if you depress the accelerator pedal beyond the Active Distance Assist DISTRONIC setting. The following message appears briefly on the driver display  **suspended**.

System limits

The system may be impaired or inoperative in the following instances, foreexample:

- In snow, rain, fog, heavy spray, if there is glare, in direct sunlight or in greatly varying light conditions.
- The windscreen in the camera's area is dirty, misted up, damaged or covered.
- If the radar sensors are dirty or covered.
- In multi-storey car parks or on roads with steep uphill or downhill gradients.
- If there are narrow vehicles in front, such as bicycles or motorcycles.

Moreover, braking or accelerating on slippery roads can cause one or several wheels to lose traction, and the vehicle could then begin skidding.

Do not use Active Distance Assist DISTRONIC in these situations.

WARNING Risk of accident from acceleration or braking by Active Distance Assist DISTRONIC

Active Distance Assist DISTRONIC may accelerate or brake in the following cases, for example:

- If the vehicle pulls away using Active Distance Assist DISTRONIC.
- If the stored speed is called up and is considerably faster or slower than the currently driven speed.
- If Active Distance Assist DISTRONIC no longer detects a vehicle in front or does not react to relevant objects.

Always carefully observe the traffic conditions and be ready to brake at all times.

Take into account the traffic situation before calling up the stored speed.

⚠ WARNING Risk of accident due to insufficient deceleration by Active Distance Assist DISTRONIC

Active Distance Assist DISTRONIC brakes your vehicle with up to 50% of the possible deceleration. If this deceleration is not sufficient, Active Distance Assist DISTRONIC alerts you with a visual and acoustic warning.

- ▶ Adjust your speed and maintain a suitable distance from the vehicle in front.
- ▶ Brake the vehicle yourself and/or take evasive action.

⚠ WARNING Risk of accident if detection function of Active Distance Assist DISTRONIC is impaired

Active Distance Assist DISTRONIC does not react or has a limited reaction:

- when driving on a different lane or when changing lanes

- to pedestrians, animals, bicycles or stationary vehicles, or unexpected obstacles
- to complex traffic conditions
- to oncoming vehicles and crossing traffic

As a result, Active Distance Assist DISTRONIC may neither give warnings nor intervene in such situations.

- ▶ Always observe the traffic conditions carefully and react accordingly.

You can watch an animation on this topic via the following link:

■ Operating Active Distance Assist DISTRONIC and the variable limiter

⚠ WARNING Risk of accident if detection function of Active Distance Assist DISTRONIC is impaired

Active Distance Assist DISTRONIC does not react or has a limited reaction:

- when driving on a different lane or when changing lanes
- to pedestrians, animals, bicycles or stationary vehicles, or unexpected obstacles
- to complex traffic conditions
- to oncoming vehicles and crossing traffic

As a result, Active Distance Assist DISTRONIC may neither give warnings nor intervene in such situations.

- ▶ Always observe the traffic conditions carefully and react accordingly.

⚠ WARNING Risk of accident from acceleration or braking by Active Distance Assist DISTRONIC

Active Distance Assist DISTRONIC may accelerate or brake in the following cases, for example:

- If the vehicle pulls away using Active Distance Assist DISTRONIC.
- If the stored speed is called up and is considerably faster or slower than the currently driven speed.
- If Active Distance Assist DISTRONIC no longer detects a vehicle in front or does not react to relevant objects.

- ▶ Always carefully observe the traffic conditions and be ready to brake at all times.
- ▶ Take into account the traffic situation before calling up the stored speed.

⚠ WARNING Risk of accident due to insufficient deceleration by Active Distance Assist DISTRONIC

Active Distance Assist DISTRONIC brakes your vehicle with up to 50% of the possible deceleration. If this deceleration is not sufficient, Active Distance Assist DISTRONIC alerts you with a visual and acoustic warning.

- ▶ Adjust your speed and maintain a suitable distance from the vehicle in front.
- ▶ Brake the vehicle yourself and/or take evasive action.

⚠ WARNING Risk of accident due to adjustment of speed by the Active Speed Limit Assistant

The speed adopted by the Active Speed Limit Assistant may be too high or incorrect in individual cases:

- For speed limits below 20 km/h
- In wet or foggy conditions

- ▶ Ensure that the speed driven always complies with the traffic regulations.
- ▶ Adjust the speed driven to the current traffic and weather conditions.

Requirements

Active Distance Assist DISTRONIC:

- The electric parking brake is released.
- ESP® is activated and is not intervening.
- The transmission is in position **D**.
- All the doors are closed.
- Check of the radar sensor system has been successfully completed.

Variable limiter:

- The variable limiter is selected.

- Adopts the stored/detected speed
- Deactivates Active Distance Assist DISTRONIC/the variable limiter
- Control panel to increase/decrease speed

Increases/decreases the specified distance

Switches between the variable limiter and Active Distance Assist DISTRONIC

- To operate Active Distance Assist DISTRONIC or the variable limiter:** press the respective button with only one finger or swipe on the control panel.

Switches between the variable limiter and Active Distance Assist DISTRONIC

- Press .

Activating the variable limiter or Active Distance Assist DISTRONIC

- To activate without a stored speed:** press , or . **Active Distance Assist DISTRONIC:** remove your foot from the accelerator pedal. The current driving speed is stored and maintained by the vehicle using Active Distance Assist DISTRONIC or limited by the variable limiter.

or

- To activate with a stored speed:** press . **Active Distance Assist DISTRONIC:** remove your foot from the accelerator pedal. The last stored speed is recalled and held by the vehicle using Active Distance Assist DISTRONIC or limited by the variable limiter. If the stored speed has been deleted, the current vehicle speed is stored.

- When you switch off the vehicle, the stored speed is deleted. When you activate Active Distance Assist DISTRONIC, the last speed stored for the variable limiter is deleted.

Increasing or reducing the speed

- To increase the stored speed: swipe upwards from the bottom of control panel .
 - The stored speed is increased by 1 km/h.
- To decrease the stored speed: swipe downwards from the top of control panel .
 - The stored speed is decreased by 1 km/h.

or

- ▶ Briefly press **SET+** on the upper section or **SET-** on the lower section of control panel . The stored speed is increased or reduced by 10 km/h.

- or
- ▶ Press and hold **SET+** on the upper section or **SET-** on the lower section of control panel . The stored speed is increased or reduced in increments of 10 km/h.

- or
- ▶ Accelerate the vehicle to the desired speed.
 - ▶ Press **SET+** on the upper section of control panel .

Adopting the speed limit shown on the driver's display

- ▶ Activate Active Distance Assist DISTRONIC or the variable limiter: press **SET+**, **SET-** or **RES/Ⓢ**.

- ▶ Accept the displayed speed limit: press **RES/Ⓢ**. The speed limit displayed on the driver's display is adopted as the stored speed. The vehicle adapts its speed to that of the vehicle in front, but only up to the stored speed, or limits its speed accordingly.

-  A speed limit shown on the driver display is only adopted while driving, not when stationary.

Pulling away with Active Distance Assist DISTRONIC

- ▶ Activate Active Distance Assist DISTRONIC and remove your foot from the brake pedal.
- ▶ Press **RES/Ⓢ**.

or

- ▶ Depress the accelerator pedal briefly and firmly. The functions of Active Distance Assist DISTRONIC remain active.

Reducing or increasing the specified distance from the vehicle in front

- ▶ Press . The  display appears. The specified distance is reduced by one level. If the lowest level is already selected, the selection jumps to the highest level.

Deactivating Active Distance Assist DISTRONIC or the variable limiter

 **WARNING** Risk of an accident due to Active Distance Assist DISTRONIC being active when you leave the driver's seat

If you leave the driver's seat while the vehicle is being braked by Active Distance Assist DISTRONIC only, the vehicle can roll away.

- ▶ Always deactivate Active Distance Assist DISTRONIC and secure the vehicle to prevent it from rolling away before you leave the driver's seat.

- ▶ Press **CANCEL**.

i If you brake, deactivate ESP® or if ESP® intervenes, Active Distance Assist DISTRONIC is deactivated. The variable limiter is not deactivated.

■ Function of Active Speed Limit Assist

If a changed speed limit is detected and the automatic adoption of speed limits is switched on, this is automatically adopted as the stored speed (→ page 285). Speed limits below 20 km/h are not accepted.

Adjustment of travel speed is initiated no later than when the vehicle is level with the traffic sign. For signs indicating entry into an urban zone, the speed is adapted according to that permitted within the built-up area. The speed restriction indicator on the driver display is always refreshed when the vehicle is level with the traffic sign.

If you are driving on German motorways with no speed limit, the system uses the speed stored for a stretch of road with no speed limit as the set speed. If you do not alter the stored speed on a stretch of road with no speed limit, the recommended speed of 130 km/h is adopted.

If Active Distance Assist DISTRONIC has been put into passive mode by pressing the accelerator pedal, only speed limits which are higher than the set speed are adopted.

The maximum permissible speed does not consider the road condition and current weather and traffic conditions. Adjust your speed accordingly when necessary.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognise potential dangers (→ page 265).

System limits

The system limits of Traffic Sign Assist apply to the detection of traffic signs (→ page 297).

Speed limits below 20 km/h are not automatically adopted by the system as the stored speed. Temporary speed restrictions (e.g. for a specific time or due to weather conditions) cannot be unequivocally detected by the system.

Adjust the speed in these situations.

⚠ WARNING Risk of accident due to adjustment of speed by the Active Speed Limit Assistant

The speed adopted by the Active Speed Limit Assistant may be too high or incorrect in individual cases:

- For speed limits below 20 km/h
 - In wet or foggy conditions
- ▶ Ensure that the speed driven always complies with the traffic regulations.
- ▶ Adjust the speed driven to the current traffic and weather conditions.

You can watch an animation on this topic via the following link:

■ Function of route-based speed adaptation

When Active Distance Assist DISTRONIC is activated, the vehicle speed will be adapted to the route events ahead. Depending on the drive program selected, the vehicle negotiates a route event ahead in an energy-saving, comfortable or dynamic manner. When the route event has been passed, the vehicle accelerates again to the

stored speed. The set distance to the vehicle in front, vehicles detected ahead and speed restrictions ahead are taken into account.

Route-based speed adaptation can be activated in the multimedia system (→ page 285).

The following route events are taken into account:

- Bends
- Roundabouts
- T-junctions
- Turns and exits

Also, the speed is reduced if the turn signal indicator is switched on and one of the following situations is detected:

- Turning off at junctions
- Driving on slowing-down lanes
- Driving on lanes adjacent to slowing-down lanes

The driver is responsible for choosing the right speed and observing other road users. This applies in particular to junctions, roundabouts and

traffic lights, as route-based speed adaptation does not brake the vehicle to a standstill.

When route guidance is active, the first speed adjustment is carried out automatically. If the turn signal indicator is switched on, the selected route is confirmed and further speed adaptation is activated.

Speed adaptation is cancelled in the following cases:

- If the turn signal indicator is switched off before the route event and it is presumed that the route event is not deemed relevant by the driver
- If the driver depresses the accelerator or brake pedal during the process.

System limits

Route-based speed adaptation does not take right of way regulations into account. The driver is responsible for complying with road traffic regulations and driving at a suitable speed.

In difficult conditions, the speed selection made by the system may not always be suitable. This applies to the following situations, for example:

- The road's course is not clearly visible
- Road narrowing
- Varying maximum permissible speeds in individual lanes, for example, at toll stations
- Wet road surfaces, snow or ice
- If transport equipment, for example a trailer or bicycle rack, is attached to the trailer hitch and the electrical connection has been correctly established

In these situations the driver must intervene accordingly.

 **WARNING** Risk of accident in spite of route-based speed adaptation

Route-based speed adaptation can malfunction or be temporarily unavailable in the following situations:

- If the driver does not follow the calculated route
 - If map data is not up-to-date or available
 - In the event of roadworks
 - In bad weather or road conditions
 - If the accelerator pedal is depressed
 - In the event of electronically displayed speed limitations
- ▶ Adapt the speed to the traffic situation.

■ Setting Active Distance Assist DISTRONIC driving styles

Requirements

- Active Distance Assist DISTRONIC is activated.

Multimedia system:

→  ▶▶ Settings ▶▶ Assistance
▶▶ Driving ▶▶ Active Distance Assist

Selecting a driving style

- ▶ Select **Based on DYNAMIC SELECT**, **Dynamic** or **Comfortable**.
- ⓘ Further information about Active Distance Assist DISTRONIC (→ page 279).

Setting speed adjustment

- ▶ Select **Adopt speed limit** or **Route-based speed adjustment**.
When these functions are active, the vehicle speed is adjusted depending on the route events ahead or the speed limit.
- ⓘ If one of the following systems is activated, the detected speed can be manually adopted as the speed limit:
 - Active Distance Assist DISTRONIC
 - Variable limiter
- ⓘ Further information on speed adjustment (→ page 283).

Active Steering Assist

■ Function of Active Steering Assist

Active Steering Assist is only available up to a speed of 160 km/h. The system helps you to stay in the centre of the lane by means of moderate steering interventions. Depending on the speed driven, Active Steering Assist uses the vehicles ahead and lane markings as a reference.

- ⓘ Depending on the country, in the lower speed range Active Steering Assist can use the surrounding traffic as a reference. Active Steering Assist can also assist when driving outside the centre of the lane, for example, to form an emergency corridor.

If the detection of lane markings and vehicles ahead is impaired, Active Steering Assist switches to passive mode. The system provides no support in this case.

Status display of Active Steering Assist

Grey: activated and passive

Green: activated and active

Red: system limits detected

 **White, red hands:** "hands on the steering wheel" prompt

-  During the transition from active to passive mode, the  symbol is shown as enlarged and flashing. Once the system is in passive mode, the  symbol is shown as grey in the driver display.
-  Depending on the selected vehicle settings, Active Steering Assist may be unavailable.

Steering and touch detection

The driver is required to keep their hands on the steering wheel at all times and be able to intervene at any time to correct the course of the vehicle and keep it in lane. The driver must expect a change from active to passive mode or vice versa at any time.

If the system detects that the driver has not steered the vehicle for a considerable period of time or has removed their hands from the steering wheel, display  appears. If the driver still does not steer the vehicle, a warning tone sounds in addition to the visual warning message.

If the driver does not react to this warning for a considerable period, an emergency stop is initiated (→ page 287).

The warning is not issued or stops as soon as the system detects the driver touching or steering the steering wheel.

The touch detection may be limited or inoperative if there is no direct contact between the hand and

the steering wheel, e.g. when wearing gloves or if there is a steering wheel cover on the steering wheel.

If Active Steering Assist detects that a system limit has been reached, a visual warning is issued and a warning tone sounds.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognise potential dangers (→ page 265).

System limits

Active Steering Assist has a limited steering torque for lateral guidance. In some cases, the steering intervention is not sufficient to keep the vehicle in the lane or to drive through exits.

The system may be impaired or inoperative in the following instances:

- There is poor visibility, e.g. due to snow, rain, fog, heavy spray, greatly varying light conditions or strong shadows on the carriageway.
- There is glare, e.g. from oncoming traffic, direct sunlight or reflections.
- Insufficient road illumination.

- The windscreen is dirty, misted up, damaged or covered in the vicinity of the camera, e.g. by a sticker.
- There are no lane markings in a given lane, or the markings are not easily discernible or change quickly, for example, in a construction area or junctions.
- The lane markings are worn away, dark or covered up, e.g. by dirt or snow.
- If the distance to the vehicle in front is too short and the lane markings cannot therefore be detected.
- The roadway is narrow and winding.
- There are obstacles on the lane or projecting out into the lane, such as object markers.
- If transport equipment, for example a trailer or bicycle rack, is attached to the trailer hitch and the electrical connection has been correctly established.

The system does not provide assistance in the following conditions:

- On tight bends and when turning.

- When crossing junctions.
- At roundabouts or toll stations.
- When the tyre pressure is too low.

⚠ WARNING Risk of accident if Active Steering Assist unexpectedly stops functioning

If the system limits of Active Steering Assist are reached there is no guarantee that the system will remain active or will keep the vehicle in lane.

- ▶ Always keep your hands on the steering wheel and observe the traffic carefully.
- ▶ Always steer the vehicle paying attention to traffic conditions.

⚠ WARNING Risk of accident if Active Steering Assist unexpectedly intervenes

The detection of lane markings and objects may malfunction and cause unexpected steering interventions.

- ▶ Steer according to traffic conditions.

You can watch an animation on this topic via the following link:

■ [Activating/deactivating Active Steering Assist](#)

Requirements

- ESP[®] is activated, but is not intervening.
- Active Distance Assist DISTRONIC is activated.

Multimedia system:

 [Settings](#) [Assistance](#)
[Driving](#)

 Activate or deactivate [Active Steering Assist](#).

[Function of Active Emergency Stop Assist](#)

i The following function is only available in combination with the Driving Assistance Package.

Active Emergency Stop Assist monitors the steering wheel, accelerator, and brake pedals. If the system detects a lack of driver activity and the vehicle is in danger of leaving the lane, a warning can be issued and an emergency stop initiated.

If Active Steering Assist is switched off, the system is available from a speed of approx. 60 km/h.

If the system detects that the vehicle is in danger of leaving the lane, a warning can be issued and an emergency stop initiated.

- The driver has not touched the steering wheel for a certain while, or no steering movement is detected for a lengthy period (depending on the vehicle equipment).
 - Neither the accelerator nor the brake pedal is depressed.
- i** If Active Steering Assist is switched on and active, the system only monitors the steering wheel. If the driver has not touched the steering wheel for a certain while, a warning may be issued despite pedal actuation. Observe also the instructions on the touch detection of Active Steering Assist (→ page 285).

Active Emergency Stop Assist issues the following warnings in order:

- Display message **i** appears in the driver display.
- In addition to display **i**, a warning tone sounds.
- The **Beginning emergency stop** message appears in the driver display, a continuous warning tone sounds and the vehicle will no longer accelerate.
- The vehicle speed is reduced in increments until the vehicle comes to a standstill. Sharp brake impulses are also effected.

When automatic braking is initiated, Active Distance Assist DISTRONIC is deactivated. Depending on the respective country, the hazard warning light system is switched on.

When the vehicle has come to a standstill:

- the vehicle is secured with the electric parking brake.
- the vehicle is unlocked.
- if possible, an emergency call is made to the Mercedes-Benz emergency call centre.

Before the **Beginning emergency stop** message is displayed, you can cancel Active Emergency Stop Assist by turning the steering wheel.

Once the **Beginning emergency stop** message has been displayed, you can cancel Active Emergency Stop Assist as follows:

- Accelerating or braking: the emergency stop is cancelled, but the warning message, warning tone and electric power steering remain active
- Steering: electric power steering is cancelled, the warning message and warning tone remain active, and the vehicle continues to be braked

- Accelerating or braking: the emergency stop and electric power steering are cancelled. The warning message and warning tone are cancelled.
- i** Active Emergency Stop Assist can initiate an emergency stop a maximum of three times within a driving cycle. After that, Active Steering Assist and Active Emergency Stop Assist are disabled until the vehicle has been restarted.

System limits

For the detection of vehicles and other obstacles, observe the system limits of the following functions:

- Active Distance Assist DISTRONIC (→ page 277)
- Active Steering Assist (→ page 285)
- Active Lane Keeping Assist (→ page 304)
- Active Brake Assist (→ page 289)

Active Emergency Stop Assist is inactive in the following case:

- Active Lane Keeping Assist and Active Steering Assist are switched off.

Active Brake Assist

Function of Active Brake Assist

Active Brake Assist consists of the following functions:

- Distance warning function
- Collision warning
- Autonomous braking function
- Situation-related brake force boosting
- **Vehicles Driving Assistance Package:** Evasive Steering Assist

Active Brake Assist can help you to minimise the risk of a collision with vehicles, cyclists or pedestrians, or to reduce the effects of such a collision.

If Active Brake Assist has detected a risk of collision, a warning tone sounds and the Active Brake Assist lamp  lights up.

Display in the driver display in the **Assistance** menu

- 1** Distance insufficient
- 2** Red radar waves

In the **Assistance** menu, an insufficient distance to the vehicle in front **1** is displayed in red. If you further reduce the distance, the vehicle in front is also highlighted in red. When the system detects a risk of collision, red radar waves **2** appear ahead of the vehicle.

- i** **Vehicles with PRE-SAFE®:** depending on the country, an additional haptic warning is given in the form of slight, repeated tensioning of the driver's seat belt.

If you do not react to the warning, autonomous braking can be initiated in critical situations.

In particularly critical situations, Active Brake Assist can also initiate autonomous braking directly. In this case, the warning tone and distance warning lamp  are simultaneous with the braking action.

If you apply the brakes yourself in a critical situation or apply the brakes during autonomous braking, situation-related braking assistance is given. The brake pressure increases up to maximum emergency braking if necessary.

If autonomous braking, situation-related braking assistance or evasive action has occurred, pop-up

 appears in the driver's display. It automatically disappears after a short time.

If the autonomous braking function or the situation-dependent braking assistance is triggered, additional preventive measures for occupant protection by PRE-SAFE® may also be initiated.

 **WARNING** Risk of an accident caused by limited detection performance of Active Brake Assist

Active Brake Assist cannot always clearly identify objects and complex traffic situations.

In such cases, Active Brake Assist might:

- Give a warning or brake without reason
- Not give a warning or not brake

Active Brake Assist is only an aid. The driver is responsible for maintaining a sufficiently safe distance to the vehicle in front, vehicle speed and for braking in good time.

 Always pay careful attention to the traffic situation; do not rely on Active Brake Assist alone.

 Be prepared to brake or swerve if necessary.

If Active Brake Assist is deactivated or the functions are restricted, e.g. owing to activation of another driving system, the Active Brake Assist  warning lamp appears in the driver's display.

If the system is unavailable owing to soiled or damaged sensors or a fault, or if the functions are restricted, the Active Brake Assist  warning lamp appears in the driver's display.

Also observe the system limits of Active Brake Assist.

Distance warning function

From approximately 30 km/h, you are warned by the distance warning function if for several seconds, the safety distance to the vehicle travelling ahead is insufficient at the current speed. In this case, the distance warning lamp  in the driver's display lights up. If the distance to the vehicle ahead continues to decrease at higher speeds, the distance warning lamp  begins to flash.

Collision warning

The collision warning can assist you in the following situations with an intermittent warning tone and  warning lamp:

- at speeds up to approximately 250 km/h when approaching vehicles ahead.
- at speeds up to approximately 80 km/h when approaching stationary vehicles, pedestrians walking in the direction of travel and moving cyclists ahead.
- at speeds up to approximately 70 km/h when approaching crossing pedestrians and cyclists.
- at speeds up to approximately 60 km/h when approaching stationary pedestrians and cyclists.

Autonomous braking function

At speeds above approximately 7 km/h, the autonomous braking function can intervene in the following situations:

- at speeds up to approximately 250 km/h when approaching vehicles ahead.

- at speeds up to approximately 80 km/h when approaching moving cyclists ahead, pedestrians walking in the direction of travel and stationary vehicles.
- at speeds up to approximately 70 km/h when approaching crossing pedestrians and cyclists.

Situation-related brake force boosting

At speeds above approximately 7 km/h, situation-related brake force boosting can intervene in the following situations.

- at speeds up to approximately 250 km/h when approaching vehicles ahead.
- at speeds up to approximately 80 km/h when approaching moving cyclists ahead, pedestrians walking in the direction of travel and stationary vehicles.
- at speeds up to approximately 70 km/h when approaching crossing pedestrians and cyclists.
- at speeds up to approximately 60 km/h when approaching stationary pedestrians and cyclists.

Cancelling a brake application of Active Brake Assist

You can cancel a brake application of Active Brake Assist at any time by:

- firmly depressing the accelerator pedal or by kickdown
- releasing the brake pedal.

Active Brake Assist may cancel the brake application when one of the following conditions is fulfilled:

- You manoeuvre to avoid the obstacle.
- There is no longer a risk of collision.
- An obstacle is no longer detected in front of your vehicle.

Turning manoeuvre function (vehicles with Driving Assistance Package):

If a danger of collision with an oncoming vehicle or two-wheeler is detected when turning across an oncoming lane, autonomous braking can be initiated at speeds below 15 km/h before you have left your own lane.

You can watch an animation on this topic via the following link:

Active Evasive Steering Assist

WARNING Risk of accident despite Active Evasive Steering Assist

Active Evasive Steering Assist cannot always clearly identify objects and complex traffic situations.

In such cases, Active Evasive Steering Assist might:

- issue an unfounded warning or initiate a steering intervention
- not issue a warning or not initiate a steering intervention.

The Active Evasive Steering Assist can provide support in preventing a collision via an automatically initiated steering intervention.

- ▶ Always pay careful attention to the traffic situation; do not rely on Active Evasive Steering Assist alone.

- ▶ Be prepared to brake or swerve if necessary.
- ▶ Drive with adjusted speed if pedestrians are in the area surrounding the road.

Active Evasive Steering Assist can automatically react to objects that are stationary or moving longitudinally in your lane.

Active Evasive Steering Assist has the following characteristics:

- Detection of pedestrians, cyclists and vehicles.
- assistance by autonomous steering intervention during a necessary evasive manoeuvre
- autonomous activation if there is sufficient space in your own lane
- Reaction from a speed of approximately 30 km/h up to a speed of approximately 80 km/h.

When Active Evasive Steering Assist is intervening, and for the duration of the evasive action, a warning tone is sounded and the distance warning lamp  flashes.

The steering assistance by Active Evasive Steering Assist can be cancelled at any time by steering, accelerating or braking.

Active Evasive Steering Assist can intervene in the following speed ranges:

- when approaching stationary vehicles, pedestrians or cyclists at speeds from approximately 30 km/h to approximately 80 km/h
- when approaching pedestrians or cyclists moving longitudinally ahead at speeds from approximately 30 km/h to approximately 80 km/h

System limits

Full system performance is not yet available for a short time after switching on the vehicle or after driving off. Depending on the environmental conditions, it may take a few minutes before full system performance is available.

The system may be impaired or may not function, particularly in the following situations:

- in snow, rain, fog, heavy spray, if there is glare, in direct sunlight or in greatly varying light conditions.

- if the sensors are soiled, misted up, damaged or covered.
- if the sensors are impaired owing to interference from other radar sources, e.g. strong radar reflections in multi-storey car parks.
- if a loss of tyre pressure or a defective tyre has been detected and displayed.
- in complex traffic situations where objects cannot always be clearly identified.
- if pedestrians or vehicles move quickly into the sensor detection range.
- if pedestrians are hidden by other objects.
- if the typical outline of a pedestrian cannot be distinguished from the background.
- if a pedestrian is not detected as such, e.g. owing to special clothing or other objects.
- if there is no lane marking, or it is not clearly recognisable
- if the course of the road is not almost straight
- on bends with a tight radius.
- if the driver's seat belt is not fastened.
- when a trailer or bicycle rack is attached

Setting Active Brake Assist

Requirements

- The vehicle is switched on.

Multimedia system:

  **▶▶ Settings ▶▶ Assistance**
▶▶ Collision avoidance

 Activate or deactivate the function.

-  It is recommended that you always leave Active Brake Assist activated.

When switching off the Active Brake Assist, the distance warning function, the collision warning, the autonomous braking function and the Active Evasive Steering Assist (with Driving Assistance Package) are switched off.

-  If Active Brake Assist is deactivated, the  symbol appears in the status bar of the driver display and when the vehicle is next started the system is activated again.

Setting warning timing

-  Select  alongside **Active Brake Assist**.
-  Select **Early**, **Medium** or **Late**.

-  If the ATTENTION ASSIST has detected signs of fatigue or a microsleep, depending on the country the system can issue a warning earlier than set. Further information about ATTENTION ASSIST (→ page 273).

Speed Limit Assist

Function of Speed Limit Assist

-  This function is an on-demand feature (→ page 67).
-  The Speed Limit Assist uses Open Street Map data provided under the Open Database Licence (ODbL) terms. For more information, see: <https://www.osmfoundation.org/wiki/licence>.

Speed Limit Assist detects speed limits with the multifunction camera and displays them in the driver display and optionally in the head-up display. The camera also detects speed limits with a restriction indicated by an additional sign (e.g. in wet conditions).

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognise potential dangers (→ page 265).

Notes on trailer operation

 Observe also the notes on trailer operation (→ page 327).

If a trailer or bicycle rack is connected correctly, the central display shows the query about the type of trailer and its maximum permissible speed (→ page 331).

The driver must manually adjust the maximum permissible speed in the **small or large trailer** category.

In particular, the country-specific laws must be taken into account, e.g. on:

- maximum design speed or maximum permissible speed for which the vehicle is approved
- permissible gross mass with or without towing vehicle
- required number of years with a corresponding driving licence
- type and condition of the road used

- the weather conditions

The maximum permissible speed adapted to the vehicle/trailer combination can be transferred to the manual or automatic speed transfer during the journey (depending on the equipment).

On the system side, relevant additional signs for speed limits and clear road category traffic rules can be considered for the vehicle combination (depending on the country).

No maximum permissible speed can be selected for a bicycle rack in the multimedia system. When using a bicycle rack, observe the specifications for the maximum permissible speed in the manufacturer's manual.

Observe also the following information:

- select a speed adapted to the traffic, surroundings and weather conditions
- observe actual traffic signs
- observe applicable traffic rules and regulations

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognise potential dangers (→ page 265).

Warning when the maximum permissible speed is exceeded

The system can warn you if you unintentionally exceed the maximum permissible speed. Depending on the country, you can set how much the maximum permissible speed may be exceeded on the multimedia system before a warning is issued. You can select in the settings whether the warning should be issued optically, with the traffic sign flashing in the driver display, or a combination of optic and acoustic warning. Selection of the type of warning is confirmed country-specifically by an indication in the driver display.

- ① Optical warning only
- ② WARNING off
- ⓘ The type, duration and activation threshold of the speed limit warning, as well as the option of setting the timing of the activation threshold upon which the warning is issued, are subject to legislation valid for the respective country in which the vehicle is delivered.

Displays on the driver display

- ① Permissible speed
- ② Permissible speed with restriction
- ③ Additional sign with restriction
- ⓘ Traffic signs that affect the maximum permissible speed, e.g. indicating the beginning or end of motorways can also be detected.

The system can show up to two traffic signs on the driver display simultaneously. The system always prioritises displaying speed limits. The head-up display shows only one maximum permissible speed traffic sign at a time. If two speed signs are shown on the driver display, when speed

limits are detected, for example, the value of the left-hand speed limit ① is transmitted to the limiter, cruise control or Active Distance Assist DISTRONIC for acceptance and is shown on the head-up display.

Important information from other systems can cause traffic signs to be hidden for a short time. If the Speed Limit Assist cannot determine the current maximum permissible speed, e.g. due to a lack of signage, the following display appears in the driver display:

This display is permanent if the vehicle is in a country where Speed Limit Assist is not supported. Speed Limit Assist is not available in all countries.

If the system is temporarily or permanently unavailable due to a technical fault or soiling of the windscreen, a corresponding display message appears in the driver display. Depending on the

country, the Speed Limit Assist warning lamp

also lights up in the driver display.

- ⓘ Please also note the information on display messages (→ page 675).

System limits

The system may be impaired or inoperative in the following situations in particular:

- If visibility is poor, e.g. due to insufficient illumination of the road, highly variable shade conditions, rain, snow, fog, swirling dust or heavy spray.
- If there is glare, e.g. from oncoming traffic, direct sunlight or reflections.
- If there is dirt on the windscreen in the vicinity of the multifunction camera or if the camera is misted up, damaged or obscured.
- If the traffic signs are difficult to see because, for example, they are dirty, obscured, faded, iced over, damaged, inconveniently positioned, insufficiently illuminated or askew.
- Active traffic signs with LED displays may not be detected correctly, or even at all due to

technical factors, such as transmission frequency.

- If the signs, road markings or road layout are ambiguous, e.g. in the case of traffic signs at road works, at exits and on-ramps, in the case of adjacent lanes or parallel roads, in the case of pedestrian crossing markings at traffic lights.
- If the signage or road markings do not comply with the standard.
- If the signage, road markings, or road guidance is country-specific and deviates from the navigation system's route guidance, e.g. at or after road works.
- After sharp turns and tight bends, if traffic signs are outside the camera's field of vision.
- If you overtake vehicles with traffic signs affixed or attached to them.
- If transport devices are used that are attached to the trailer coupling, e.g. bicycle racks, the system may react to restrictions for trailers.

Setting Speed Limit Assist

Multimedia system:

- ➔ ➔ Settings ➔ Assistance
- ➔ Assistance ➔ Speed Limit Assist

Activating or deactivating the speed limit warning

- ⓘ The speed limit warning is switched on by default (depending on the country).
- ▶ Switch off **Speed limit warning**.
Following country-specific legislation, the speed limit warning remains deactivated until the next time the vehicle is switched on or off.
- ⓘ The audible speed limit warning can also be switched off and on via quick-access, by pressing and holding the mute button on the steering wheel, by pressing the speed icon in the status line of the media display or via a voice control command (availability of these functions is country-dependent).

Change the type of speed limit warning

- ▶ Change the warning to **Visual** or **Visual & audible**.

Switching the acoustic signal for a new maximum permissible speed on or off

- ❗ The acoustic signal for a new maximum permissible speed is switched off at the factory.

The function determines whether a subtle, non-intrusive sound supports each change of the displayed speed in the driver display.

▶ Activate or deactivate the function.

- ❗ The availability of the function is dependent on the country.

Setting the warning threshold

This value determines the speed at which a warning is issued when exceeded.

▶ Set the desired speed under Warning Threshold.

Availability of the function is subject to country-specific legislation.

If one of the following systems is activated, the detected speed can be manually adopted as the speed limit:

- Active Distance Assist DISTRONIC

- Cruise control
- Variable limiter

- ❗ Further information about Active Distance Assist DISTRONIC (→ page 279).

Traffic Sign Assist

Function of Traffic Sign Assist

- ❗ This function is an on-demand feature (→ page 67).

Traffic Sign Assist detects the traffic signs with the multifunction camera and compares them with the information on the digital road map of the navigation system. It supports you by showing detected speed limits and overtaking bans on the driver display. Maximum permissible speeds can also be shown on the head-up display.

The system can issue a warning when you exceed the maximum permissible speed.

In some countries, the system can provide you with further functions and can warn you when you are approaching pedestrian crossings. If the system detects that you are driving onto a section of

road in the wrong direction of travel, it triggers a warning.

The camera also detects and analyses traffic signs with a restriction indicated by an additional sign (e.g. in wet conditions).

Traffic Sign Assist portrays only selected signs on the driver display. Actual traffic signs and speed limits have priority over traffic signs and speed limits shown on the driver display.

Notes on trailer operation

- ❗ Observe also the notes on trailer operation (→ page 327).

If a trailer or bicycle rack is connected correctly, the central display shows the query about the type of trailer and its maximum permissible speed (→ page 331).

The driver must manually adjust the maximum permissible speed in the **small or large trailer** category.

In particular, the country-specific laws must be taken into account, e.g. on:

- maximum design speed or maximum permissible speed for which the vehicle is approved

- permissible gross mass with or without towing vehicle
- required number of years with a corresponding driving licence
- Type and condition of the road used
- the weather conditions

The maximum permissible speed adapted to the vehicle/trailer combination can be transferred to the manual or automatic speed transfer during the journey (depending on the equipment).

On the system side, relevant additional signs for speed limits and clear road category traffic rules can be considered for the vehicle combination (depending on the country).

No maximum permissible speed can be selected for a bicycle rack in the multimedia system. When using a bicycle rack, observe the specifications for the maximum permissible speed in the manufacturer's manual.

Observe also the following information:

- select a speed adapted to the traffic, surroundings and weather conditions
- observe actual traffic signs

- observe applicable traffic rules and regulations

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognise potential dangers (→ page 265).

Displays on the driver display

- ① Permissible speed
- ② Permissible speed with restrictions
- ③ Additional sign with restriction

The system can show up to two traffic signs on the driver display simultaneously. The system always prioritises displaying speed limits. The

head-up display shows only one maximum permissible speed traffic sign at a time. If two speed signs are shown on the driver display, when speed limits are detected, for example, the value of the left-hand speed limit ① is always transmitted to the limiter, cruise control or Active Distance Assist DISTRONIC for acceptance and is shown on the head-up display.

Important information from other systems can cause traffic signs to be hidden for a short time.

Examples of traffic signs which can be displayed

Traffic Sign Assist can detect and display the following traffic signs ❶:

- speed limits
- end of speed limit
- no overtaking zones
- play streets
- depending on the country: signs showing the start or end of motorways and dual carriageways

Traffic Sign Assist can detect the following additional signs ❸ and, if necessary, analyse the relevance of the restrictions using other vehicle sensors:

- in wet conditions
- slippery road surfaces
- in fog
- temporary restrictions
- exits
- restrictions for vehicle/trailer combinations

Traffic Sign Assist also uses data from the digital street map on the navigation system. When you leave or enter a municipality or change roads, on a motorway exit or slip road for example, or after you turn at a junction, the display on the driver display can thus be updated without a traffic sign having been detected.

❶ Regularly update the digital road map of the navigation system to ensure optimum functioning of Traffic Sign Assist (→ page 25).

Depending on vehicle equipment and country, the system can also display speed restrictions ahead on the driver display and head-up display. The driver display can also show the distance to an upcoming lower limit speed. Information from the digital road map of the navigation system is used for this purpose. The **Assistance** menu can also display a dynamic visualisation of the speed limits ahead.

If Traffic Sign Assist cannot determine the currently applicable maximum permissible speed (e.g. due to a lack of signage), the following display appears in the driver display:

Traffic Sign Assist is not available in all countries. This is displayed continuously if the vehicle is in a country where Traffic Sign Assist is not supported.

If Traffic Sign Assist is temporarily or permanently unavailable due to a technical fault or soiling of the windscreen, the Traffic Sign Assist warning lamp  appears on the driver display.

❶ Please also note the information on the display messages for Traffic Sign Assist (→ page 675).

Warning when the maximum permissible speed is exceeded

The system can warn you if you unintentionally exceed the maximum permissible speed. Depending on the country, you can set how much the maximum permissible speed may be exceeded on the multimedia system before a warning is issued. You can switch off the warning, or select in the settings whether the warning should be issued optically, with the traffic sign flashing in the driver

display, or a combination of optic and acoustic warning. The selected setting is confirmed by an indication on the driver display.

- ① Optical warning only
- ② WARNING off

ⓘ The type, duration and deployment stages of the speed limit warning, as well as the option of setting the timing of the deployment stages upon which the warning is issued, are subject to legislation valid for the respective country in which the vehicle is delivered.

Additional functions of Traffic Sign Assist (country-specific)

Warning for no-entry signs: Traffic Sign Assist can warn you if you drive the wrong way down a section of road, for example, on motorway slip roads or one-way streets.

Warning at pedestrian crossings: Traffic Sign Assist can warn you up to a speed of approximately 70 km/h that you are approaching a pedestrian crossing, wherever pedestrians are present in the danger zone or are moving towards it.

System limits

The system may be impaired or inoperative in the following situations in particular:

- If visibility is poor, e.g. due to insufficient illumination of the road, highly variable shade conditions, rain, snow, fog, swirling dust or heavy spray.
- If there is glare, e.g. from oncoming traffic, direct sunlight or reflections.

- If there is dirt on the windscreen in the vicinity of the multifunction camera or if the camera is misted up, damaged or obscured.
- If the traffic signs are difficult to see because, for example, they are dirty, obscured, faded, iced over, damaged, inconveniently positioned, insufficiently illuminated or askew.
- Active traffic signs with LED displays may not be detected correctly, or even at all due to technical factors, such as transmission frequency.
- If the information on the navigation system's digital map is incorrect, incomplete or out of date.
- If the signs, road markings or road layout are ambiguous, e.g. in the case of traffic signs at road works, at exits and on-ramps, in the case of adjacent lanes or parallel roads, in the case of pedestrian crossing markings at traffic lights.
- If the signage or road markings do not comply with the standard.
- If the signage, road markings, or road guidance is country-specific and deviates from the

navigation system's route guidance, e.g. at or after road works.

- After sharp turns and tight bends, if traffic signs are outside the camera's field of vision.
- If you overtake vehicles with traffic signs affixed or attached to them.
- If you use transport equipment secured to the vehicle with a trailer coupling, such as a bicycle rack, restrictions for vehicle/trailer combinations may be considered valid as applicable.

■ Setting Traffic Sign Assist

Multimedia system:

- 

 ► Settings ► Assistance
 ► Assistance ► Traffic Sign Assist

Activating or deactivating the speed limit warning

- ① The speed limit warning is switched on by default (depending on the country).
- Switch off [Speed limit warning](#).
Following country-specific legislation, the speed limit warning remains deactivated until the next time the vehicle is switched on or off.

- ① The audible speed limit warning can also be switched off and on via quick-access, by pressing and holding the mute button on the steering wheel, by pressing the speed icon in the status line of the media display or via a voice control command (availability of functions depending on respective country).

Change the type of speed limit warning

- Change the warning to [Visual](#) or [Visual & audible](#).

Setting the warning threshold

This value determines the speed at which a warning is issued when exceeded.

- Set the desired speed under warning threshold.
- ① Availability of the function is subject to country-specific legislation.

Switching the acoustic signal for a new maximum permissible speed on or off

- ① The acoustic signal for a new maximum permissible speed is switched off at the factory.

The function determines whether a subtle, non-intrusive sound supports each change of the displayed speed in the driver display.

- Activate or deactivate the function.
- ① Availability of the function is dependent on the country.

Traffic light view

■ Information about the traffic light view

The traffic light view supports the driver when waiting in front of a red light by displaying the camera image on the central display. The camera image is displayed when the driver is the first vehicle in front of the red light and faded out when the vehicle drives off.

■ Displaying traffic light view

Requirements:

- The [Traffic light view](#) option is switched on.
- A traffic light view is available.

Multimedia system:

➔  ➔ Settings ➔ Assistance
➔ Assistance ➔ Traffic light view

 This function is not available in all countries.

If the vehicle is in first position at a traffic light, the camera image with traffic light view is shown on the central display.

When the vehicle pulls away, the camera image is faded out.

▶ Activate  or deactivate  **Traffic light view.**

Using other available functions

▶ Select .

▶ Select **On request** or **Automatic**.

If **On request** is set and a traffic light view is available, the **Please tap here for traffic light view.** message is displayed. The camera image is shown after confirmation of the message.

When **Automatic** is set, the camera image is automatically displayed when the traffic light view is available.

Blind Spot Assist

Function of Blind Spot Assist with exit warning

Blind Spot Assist uses two lateral, rear-facing radar sensors to monitor the area up to 40 m behind and 3 m next to your vehicle.

If at speeds above approximately 12 km/h a vehicle is detected and this vehicle subsequently enters the monitoring range directly next to your vehicle, the warning lamp in the outside mirror lights up red.

Status display in the driver's display

Grey: the system is activated but inoperative.

Green: the system is activated and operational.

If a vehicle is detected close to your vehicle and you actuate the turn signal indicator in its direction, a double warning tone sounds and the red warning lamp in the outside mirror flashes. If the turn signal indicator remains switched on, all other detected vehicles are indicated only by the flashing of the red warning lamp.

If you overtake a vehicle quickly, no warning is given.

 **WARNING** Risk of accident despite Blind Spot Assist

Blind Spot Assist does not react to vehicles approaching and overtaking you at a greatly different speed.

Blind Spot Assist cannot warn drivers in this situation.

▶ Always pay careful attention to the traffic situation and maintain a safe distance at the side of the vehicle.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognise dangers (→ page 265).

Exit warning

The exit warning is an additional function of Blind Spot Assist and can warn vehicle occupants about approaching vehicles when leaving the vehicle when stationary.

⚠ WARNING Risk of accident despite exit warning

The exit warning neither reacts to stationary objects nor to persons or road users approaching you at a greatly differing speed.

The exit warning cannot warn drivers in these situations.

- ▶ Always pay particular attention to the traffic situation when opening the doors and make sure there is sufficient clearance.

If there is a vehicle in the monitoring range, this is indicated in the outside mirror. If a vehicle occupant opens the door on the side with the warning, a warning tone sounds and the warning lamp in the outside mirror starts to flash.

This additional function is only available when Blind Spot Assist is active. When the exit warning is activated, it can warn vehicle occupants for up to three minutes after switching the vehicle off. The exit warning is no longer available once the warning lamp in the outside mirror flashes three times.

The exit warning is only an aid and not a substitute for the attention of vehicle occupants. The responsibility for opening and closing the doors and for leaving the vehicle remains with the vehicle occupants.

System limits

Blind Spot Assist may be restricted in the following situations, in particular:

- if there is dirt on the sensors or the sensors are obscured
- in poor visibility, e.g. due to fog, heavy rain or snow
- if there are narrow vehicles, e.g. bicycles or motorbikes
- if the road has very wide or narrow lanes
- if vehicles are not driving in the middle of their lane

Warnings may be issued in error when driving close to crash barriers or similar continuous lane borders. Always make sure that there is sufficient distance to the side for other traffic or obstacles.

Warnings may be interrupted when driving alongside long vehicles, for example lorries, for a prolonged time.

Blind Spot Assist is not operational when reverse gear is engaged.

Blind Spot Assist and the exit warning are not operational when a trailer is coupled to the vehicle and the electrical connection has been correctly established.

The exit warning may be limited in the following situations:

- when the sensors are covered by adjacent vehicles in narrow parking spaces
- when people approach the vehicle
- in the event of stationary or slowly moving objects

■ Activating or deactivating Blind Spot Assist

Multimedia system:

➔  ➔ Settings ➔ Assistance
➔ Collision avoidance

▶ Activate or deactivate **Blind Spot Assist**.

Active Lane Keeping Assist

Function of Active Lane Keeping Assist

Active Lane Keeping Assist monitors the area in front of your vehicle by means of a multifunction camera, (→ page 265) and can protect you from leaving your lane unintentionally. The system can guide you back into your lane by course-correcting steering intervention, and warn you with tangible steering wheel feedback.

Active Lane Keeping Assist is available in the speed range between 60 km/h and 200 km/h.

The system can intervene if the following conditions are met:

- Active Lane Keeping Assist detects a lane marking.
- One of your front wheels moves onto this lane marking.

If you activate the direction indicators, there is no steering intervention on that side.

There is no steering intervention if you leave your lane without activating the direction indicators but there is a risk of collision with a moving obstacle in your own lane.

Vehicles with Blind Spot Assist or Driving Assistance Package: If the system detects an obstacle, e.g. another vehicle, in the adjacent lane, there is steering intervention despite the direction indicators.

In the following cases a warning ① appears in the driver's display and a warning tone is sounded:

- a steering intervention by Active Lane Keeping Assist has a duration longer than approximately ten seconds.
- there are two or more steering interventions by the systems within approximately three minutes, without steering action by the driver.

You can set the sensitivity of the system in the Active Lane Keeping Assist settings, to determine the level of assistance. You can also determine whether the system is to react to interrupted lane markings, or only to solid lane markings (→ page 306).

Status displays of Active Lane Keeping Assist

White: Active Lane Keeping Assist is switched off.

If ESP® is switched off or a tyre pressure loss warning is given, Active Lane Keeping Assist is automatically switched off.

Yellow: There is a malfunction. Also note any display messages.

Grey: Active Lane Keeping Assist is switched on but not ready.

Green: Active Lane Keeping Assist is switched on and ready.

Red: Active Lane Keeping Assist has guided you back into your lane by course-correcting steering intervention. If a tangible warning is also given at the steering wheel, the status display flashes. Only the lane

marking on the warning side is shown in red.

Display in the driver's display in the menu [Assistance](#)

If one of your front wheels moves onto a recognised lane marking, this is highlighted in red in the [Assistance](#) menu in the driver's display.

System limits

In the following situations, there may be no course-correcting steering intervention but a warning may be given at the steering wheel depending on the situation:

- if you clearly and actively steer, brake or accelerate.
- if a driving safety system is intervening, e.g. ESP® or Active Brake Assist
- if you have adopted a sporty driving style with high cornering speeds or high rates of acceleration.
- if transport equipment such as a trailer or rear bicycle rack is attached to the trailer coupling, and the electrical connection has been established correctly

The system may be impaired or may not function, particularly in the following situations:

- if there is poor visibility, e.g. owing to insufficient road illumination, highly variable shade conditions, rain, snow, fog or heavy spray.

- if there is glare, e.g. from oncoming traffic, direct sunlight or reflections.
- if there is soiling on the windscreen in the vicinity of the multifunction camera, or if the camera is misted up, damaged or obscured.
- if the bumper is soiled in the area of the radar sensors, or if these are damaged or obscured
- if there are no lane markings, or several unclear lane markings are present for one lane, e.g. around roadworks.
- if the lane markings are worn, dark or covered.
- if the distance to the vehicle in front is too short and the lane markings cannot be detected as a result.
- if the lane markings change quickly, e.g. lanes branch off, cross one another or merge.
- if the carriageway is very narrow and winding.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognise dangers (→ page 265).

■ Activating or deactivating Active Lane Keeping Assist

Multimedia system:

- ➔  ➔ Settings ➔ Assistance
- ➔ Collision avoidance
- ➔ Active Lane Keeping Assist
- ▶ Activate or deactivate the function.

Alternatively, Active Lane Keeping Assist can be activated and deactivated via the vehicle quick-access .

- ⓘ Setting after vehicle start is country-dependent.

■ Setting Active Lane Keeping Assist

Multimedia system:

- ➔  ➔ Settings ➔ Assistance
- ➔ Collision avoidance
- ➔ Active Lane Keeping Assist

Setting the sensitivity

- ▶ Select .
- ▶ Select **Early**, **Med.** or **Late**.

The last setting selected is automatically adopted when the vehicle is next started.

- ⓘ The standard setting for this function is country-dependent.

Activating/deactivating assistance for interrupted lane markings

- ▶ Select **Advanced support**.

The last setting selected is automatically adopted when the vehicle is next started.

- ⓘ The standard setting for this function is country-dependent.
- ⓘ This function must be activated for Emergency Stop Assist to be fully available. Further information about Emergency Stop Assist (→ page 287).

Function of adaptive damping adjustment

Suspension with adaptive damping adjustment continuously adjusts the characteristics of the suspension dampers to the current operating and driving conditions.

The damping is set individually for each wheel and is affected by the following factors:

- the road surface conditions
- vehicle load
- the drive program selected
- the driving style

The drive program can be adjusted using DYNAMIC SELECT.

Reversing camera

■ Function of the reversing camera

The reversing camera is only an aid. It is not a substitute for your attention to the surroundings. The responsibility for safe manoeuvring and parking remains with you. Make sure that there are no persons, animals or objects etc., in the manoeuvring area while manoeuvring and parking.

- ⓘ The area behind the vehicle is displayed as a mirror image, as in the inside rear view mirror.

Vehicles without Parking Package

The following camera views are available in the central display:

Standard view

- ① Guide lines at a distance of approximately 0.5 m, 1.0 m, 1.5 m and 3.0 m from the rear area
- ② Lane marking the course the tyres will take with the current steering angle (dynamic)
- ③ Driven surface depending on the current steering angle (dynamic)
- ④ Guide line at a distance of approximately 0.3 m from the rear area

Wide-angle view

Trailer view

- ⑤ Yellow guide line, locating aid
- ⑥ Red guide line at a distance of approximately 0.3 m from the ball head of the trailer hitch
- ⑦ Ball head of the trailer hitch

Pedestrian braking function

- ① This function is only available in vehicles without the Parking Package. Vehicles with the Parking Package are equipped with manoeuvring assistance functions (→ page 324).

The pedestrian braking function can prevent collisions with pedestrians when reversing the vehicle at slow speeds. If the reversing camera detects a

person in the vehicle's path, the vehicle can be braked to a standstill.

The pedestrian braking function can intervene under the following conditions:

- The vehicle is reversing at a speed below 15 km/h.
- The camera image is shown on the central display.

When automatic braking is triggered, the symbol  appears in red in the camera image.

In addition, the message  **Pedestrian! Deact. emerg. braking: press here** appears.

The driver can close or ignore this message. Pedestrian braking then remains active. When the driver taps the message, pedestrian braking is momentarily deactivated.

In the following cases, the pedestrian braking function is activated again:

- The vehicle is travelling forward at over 16 km/h.
- The vehicle is switched off and on again.

 If the function is unavailable or deactivated, the symbol  appears in grey in the camera image.

The pedestrian braking function serves solely as an aid. It is not a substitute for your attention to the surroundings. The responsibility for safe manoeuvring and parking remains with you. Make sure that no persons, animals or objects etc. are in the manoeuvring range.

 **WARNING** Risk of accident caused by limited detection of the pedestrian braking function

The pedestrian braking function cannot always clearly detect people. Other obstacles are not detected by the function.

In these cases, the function may brake unnecessarily or not brake at all.

- ▶ Always pay careful attention to the traffic situation; do not rely on the pedestrian braking function alone.
- ▶ Be ready to brake.

In the following situations, the pedestrian braking function is not available:

- on inclines
- if transport equipment, for example a trailer or bicycle rack, is attached to the trailer hitch and the electrical connection has been correctly established.
- if the reversing camera is not operational

Please also note the system limits of the reversing camera.

Vehicles with Parking Package

The following camera views are available in the central display:

Menu **Camera views**

- ① Lane marking the course the tyres will take with the current steering angle (dynamic)
- ② Driven surface depending on the current steering angle (dynamic)
- ③ Menu **Parking Assistance**
- ④ Reversing camera with Top View
- ⑤ Wide-angle view
- ⑥ Trailer view
- ⑦ Activating/deactivating Parking Assist PARKTRONIC (→ page 317)
- ⑧ Guide line at a distance of approximately 0.3 m from the rear area

- ⑨ Guide lines at a distance of approximately 0.5 m, 1.0 m, 1.5 m and 3.0 m from the rear area
- ⑩ Warning display of Parking Assist PARKTRONIC (→ page 314)
- i When Active Parking Assist is active, paths ① are displayed in green (→ page 318).

Wide-angle view

- ⑩ Warning display of Parking Assist PARKTRONIC (→ page 314)

Trailer view

- ⑪ Yellow guide line, locating aid
- ⑫ Red guide line at a distance of approximately 0.3 m from the ball head of the trailer hitch
- ⑬ Ball head of the trailer hitch

System limits

If the system is not ready for operation, the **System inoperative** message appears on the central display.

The reversing camera will not function or will only partially function in the following situations:

- You are driving forwards at a speed greater than approximately 16 km/h.

- The tailgate is open.
- The weather conditions are poor, e.g. heavy rain, snow, fog, storm or spray.
- The light conditions are poor, e.g. at night or if a light is shining into the camera.
- The camera lens is obstructed, dirty or misted up. Observe the notes on cleaning the reversing camera (→ page 504).
- The camera or rear of your vehicle is damaged. In this case, have the camera and its position and setting checked at a qualified specialist workshop.

i Do not use the reversing camera in these types of situations. You could otherwise injure others or collide with objects when parking the vehicle.

The field of vision and other functions of the camera system may be restricted due to additional vehicle attachments (e.g. licence plate bracket or bicycle rack).

i The contrast of the display may be impaired by direct sunlight or by other light sources,

e.g. when driving out of a garage. In this case, pay particular attention.

i Have the display repaired or replaced if, for example, pixel errors considerably restrict its use.

Also observe the information on vehicle sensors and cameras (→ page 265).

360° Camera

Function of the 360° camera

The 360° camera is a system comprising four cameras which cover the immediate vehicle surroundings. The cameras support you, for example, when parking or when exits are difficult to see.

The 360° camera includes the following cameras and evaluates their images:

- Reversing camera
- Front camera
- Two outside mirror cameras

The cameras serve solely as aids and may show a distorted view of obstacles, show them incorrectly or even omit them altogether. They are not a sub-

stitute for you having to pay attention to your surroundings. The responsibility for safe manoeuvring and parking remains with you. Ensure that there are no persons, animals or objects etc. in the manoeuvring area while manoeuvring and parking.

The following camera perspectives are available in the central display:

Menu **Camera views** overview

- 1 Menu **Parking Assistance**
- 2 Top view with image from the front camera
- 3 Wide-angle view
- 4 Top view with image from the reversing camera

- ⑤ Top view with images from the side cameras in the outside mirrors
- ⑥ Activating/deactivating Parking Assist PARKTRONIC (→ page 317)
- ⑦ Set the GPS activation point
- ⓘ The warning display of the Parking Assist PARKTRONIC is shown in all views (→ page 314).

Function of the guide lines

- ① Guide lines at a distance of approximately 0.5 m, 1.0 m, 1.5 m and 3.0 m from the rear area
- ② Lane marking the course the tyres will take with the current steering angle (dynamic)
- ③ Driven surface depending on the current steering angle (dynamic)
- ④ Guide line at a distance of approximately 0.3 m from the rear area
- ⓘ When Active Parking Assist is active, lanes and guidelines are displayed in green instead of yellow (→ page 318).

Top view with the image from the front or reversing camera

- ① Warning display of Parking Assist PARKTRONIC (→ page 314)
- ② Your vehicle from above
- ③ Lane indicating the route the vehicle will take at the current steering angle

Top view with image from the outside mirror cameras

The front and rear sides of the vehicle can be seen in this view.

Wide-angle view

- ① Display of Parking Assist PARKTRONIC (→ page 314)
- ② Top view with image from the reversing camera
- ③ Wide-angle view

If the top view with reversing camera image is displayed, switch to the wide-angle view with the ② icon indented to the left. When the wide-angle view is displayed, switch back to the respective top view.

If you select the trailer view and no trailer is coupled to the vehicle, the following display appears:

Trailer view

- ① Switch between standard and trailer view
 - ② Yellow guide line, locating aid
 - ③ Ball head of the trailer hitch
 - ④ Red guide line at a distance of approximately 0.3 m from the ball head of the trailer hitch
- ⓘ In trailer mode, the guide lines are shown at the level of the trailer hitch.

When the electrical connection is established between the vehicle and the trailer, the display changes to the side camera view.

Side view of outside mirror cameras in trailer view

- ① Switch to the side view of the outside mirror cameras

System limits

If the system is not ready for operation, the **System inoperative** message appears on the central display.

⚠ WARNING Risk of accident due to functional limitations of the 360° camera

If the function of the 360° camera is restricted, there is a risk of collision with persons or objects.

- ▶ Do not use the 360° camera in case of functional limitations.
- ▶ Ensure that there are no persons, animals or objects etc., in the manoeuvring area while manoeuvring and parking.

The 360° camera will not function or will only partially function in the following situations:

- You are driving forwards at a speed greater than approximately 16 km/h.
- The doors are open.
- An outside mirror is not completely extended.
- The tailgate is open.
- The weather conditions are poor, e.g. heavy rain, snow, fog, storm or spray.
- The light conditions are poor, e.g. at night or if a light is shining into the camera.
- The camera lens is obstructed, dirty or misted up. Refer to the notes on cleaning the 360° camera (→ page 504).
- If cameras or vehicle components in which the cameras are fitted are damaged. In this event,

have the cameras, their positions and their setting checked at a qualified specialist workshop.

For technical reasons, the standard height of the vehicle may be altered if the vehicle is carrying a heavy load and can result in inaccuracies in the guide lines and in the display of the generated images.

The field of vision and other functions of the camera system may be restricted due to additional vehicle attachments (e.g. licence plate bracket or bicycle rack).

- ① Contrast of the display may be impaired by abrupt, direct sunlight or other light sources, e.g. when driving out of a garage. Particular attention must be afforded in this case.
- ① Have the display repaired or replaced if, for example, its use is considerably restricted due to pixel errors.

Observe also the information on vehicle sensors and cameras (→ page 265).

Calling up the 360° camera views using the button

- ▶ Press button ①.
- ▶ Select **Camera views** menu.
- ▶ Select the desired view in the multimedia system (→ page 310).

Selecting a view for the 360° Camera (reverse gear)

Requirements

- The **Activation in R** setting is activated in the multimedia system .
- ▶ Engage reverse gear.
 - ▶ Select the desired view in the multimedia system (→ page 310).

Opening the camera cover

Multimedia system:

- ▶ ▶ **Settings** ▶ **Assistance**
- ▶ **Camera**
- ▶ Select **Open camera cover**.

- ① The camera cover closes automatically after some time or after the vehicle is switched on or off.

Parking Assist PARKTRONIC

Function of Parking Assist PARKTRONIC

Parking Assist PARKTRONIC is an electronic parking assistance system which monitors the area

surrounding your vehicle . The distance between your vehicle and a detected obstacle is displayed visually and acoustically.

The passive side impact protection also warns you of obstacles to the side. These must be detected beforehand by the sensors in the front or rear bumper while driving by them. If you steer in the direction of a detected obstacle and there is a risk of a lateral collision, a warning is issued.

Passive side impact protection can be activated and deactivated via the multimedia system (→ page 317).

In order that front or rear obstacles to the side can be displayed, the vehicle must first travel a distance of at least half a vehicle length. Once the vehicle has travelled one vehicle length, obstacles on all sides can be shown.

Parking Assist PARKTRONIC serves solely as an aid. It is not a substitute for you having to pay attention to your surroundings. The responsibility for safe manoeuvring and parking remains with you. Ensure that there are no persons, animals or objects in the manoeuvring area while manoeuvring and parking in/exiting parking spaces.

Displays on the central display

Vehicles with 360° camera

Vehicles with reversing camera

- ① Ready for display at the front and rear
- ② Ready for display all round
- ③ Ready for display all round and obstacle detection

As soon as Parking Assist PARKTRONIC is ready for display, the respective areas ① to ③ of the display are shown in blue.

The colour of the display changes depending on the distance to the detected obstacle:

- **Blue:** > 1 m (no obstacles detected)
- **Yellow:** approximately 1 m - 0.7 m
- **Orange:** approximately 0.7 m - 0.4 m

- **Red:** < 0.4 m

Vehicles with 360° camera: the boundary line shifts dynamically depending on the position and distance of the obstacles detected.

An intermittent warning tone also sounds depending on the distance to the obstacle detected. You can set the timing of the warnings on the multimedia system. In the **Warn early** setting, the system warns you from a distance of 1 m. In the standard setting, from a shorter distance of 0.4 m.

Vehicles with 360° camera

Vehicles with reversing camera

If you are not in the **Camera & parking** menu and an obstacle in the vehicle path is detected, a pop-up window ① appears on the central display if the following requirements are met:

- **Vehicles without Active Parking Assist:** when driving no faster than 12 km/h.
- **Vehicles with Active Parking Assist:** when driving no faster than 18 km/h.

Optionally, obstacles detected by Parking Assist PARKTRONIC from a distance of approximately 1.0 m in front ② and 0.7 m at the sides ③ can also be displayed on the head-up display.

System limits

Parking Assist PARKTRONIC does not necessarily take into account the following obstacles:

- Obstacles below the detection range, e.g. persons, animals or objects.
- Obstacles above the detection range, e.g. overhanging loads, overhangs or loading ramps of lorries.

- Pedestrians or animals approaching the vehicle from the side.
- Objects placed next to the vehicle

Obstacles on the sides are not shown in the following situations, for example:

- You park the vehicle and switch it off.
- You open the doors.

After the vehicle is restarted, obstacles must be detected again by driving past them before a new warning can be issued.

Observe also the system limits of the following systems:

- Reversing camera (→ page 306)
- 360° camera (→ page 310)

Observe the information on vehicle sensors and cameras; otherwise the system cannot function properly (→ page 265).

Vehicles with trailer hitch: If a transport device, e.g. trailer or bicycle rack is attached to the trailer hitch and the electrical connection is correctly

established, Parking Assist PARKTRONIC is deactivated for the rear zone.

Problems with Parking Assist PARKTRONIC

If the Parking Assist PARKTRONIC display lights up red for approximately three seconds and then goes out, and the  symbol appears on the driver display, the system may have been deactivated due to signal interference. Start the vehicle again and check whether Parking Assist PARKTRONIC works in a different location.

If a warning tone also sounds, the causes may be as follows:

- (→ page 504) **The sensors are dirty:** clean the sensors .
- **Parking Assist PARKTRONIC has been deactivated due to a malfunction:** restart the vehicle. If the problem persists, consult a qualified specialist workshop.

Activating/deactivating Parking Assist PARKTRONIC

! **NOTE** Vehicle damage when parking or manoeuvring due to nearby objects

Parking Assist PARKTRONIC may not detect certain objects in the close-up range.

▶ When parking or manoeuvring, pay particular attention to objects that are under or above the sensors, e.g. flower pots or drawbars. The vehicle or other objects may otherwise be damaged.

Requirements

- The camera menu is open.
- Or: the Parking Assist PARKTRONIC pop-up window is displayed.
- ▶ Tap  on the central display.

If the indicator lamp is lit, Parking Assist PARKTRONIC is active. If the indicator lamp does not light up or the symbol  is displayed, Parking Assist PARKTRONIC is not active.

- ① Parking Assist PARKTRONIC is automatically activated when the vehicle is started.

Alternatively, Parking Assist PARKTRONIC can be activated or deactivated in the quick-access menu.

Setting the warning tones of Parking Assist PARKTRONIC

Multimedia system:

→  ▶ Settings ▶ Assistance
▶ Parking ▶ PARKTRONIC

Setting warning tones

- ▶ Select **Set warning tones**.
- ▶ Set the desired level under **Volume** or **Tone pitch**.

Activating/deactivating audio fadeout

- ▶ Select **Audio fadeout** and activate or deactivate **Audio fade for warnings**.
- The volume of the media source currently playing is reduced during a Parking Assist PARKTRONIC warning tone.

or

- ▶ Select **Audio fadeout** and activate or deactivate **Audio fadeout in trans. position R**. The volume of the media source currently playing is reduced when reverse gear is engaged.

Setting the time of the warnings

- ▶ Select **Time of warning**.
- ▶ Set the desired warning time for **Front** or **Rear**.
- ▶ Activate or deactivate **Side warning**.

Active Parking Assist

Function of Active Parking Assist

Active Parking Assist is an electronic parking assistance system, which uses ultrasound with the assistance of the reversing camera and 360° camera. When you are driving forwards up to approximately 35 km/h, the system automatically measures parking spaces on both sides of the vehicle.

Active Parking Assist serves solely as an aid. It is not a substitute for you having to pay attention to

your surroundings. The responsibility for safe manoeuvring and parking remains with you. Ensure that no persons, animals or objects etc. are in the manoeuvring range.

Active Parking Assist offers the following functions:

Vehicles with reversing camera

- Parking in parking spaces parallel to the roadway
- Reversing into parking spaces perpendicular to the roadway

The parking space is freely selectable. The parking procedure is executed with the vehicle reversing.

Vehicles with 360° camera

- Parking in parking spaces parallel to the roadway
- Parking in parking spaces perpendicular to the roadway (either forwards or reversing as desired)

- Parking in parking spaces that can only be detected as such from markings (for example at the roadside)
- Exiting parking spaces if you have parked using Active Parking Assist

The parking space is freely selectable. The parking direction (forwards or reversing) can also be freely selected, depending on the orientation of the parking space.

If Active Parking Assist is available, the  message appears in the driver display. When the system detects parking spaces,  appears. The arrows show the side of the roadway on which free parking spaces are located. These are then shown on the central display.

When Active Parking Assist is activated, the turn signal indicators are activated based on the calculated path of your vehicle. The procedure is assisted by acceleration, braking, steering and gear changes when entering or exiting a parking space.

To start the parking procedure, press the button  (→ page 320).

Active Parking Assist will be cancelled in the following situations:

- You press the  button again.
- You begin steering.
- You select park position .
- You engage the electric parking brake.
- ESP® intervenes.
- You open the driver's door.

System limits

If the exterior lighting is malfunctioning, Active Parking Assist is not available.

Objects above or below the detection range of Active Parking Assist, e.g. protruding loads, overhangs or loading ramps of trucks or parking space boundaries are not detected when measuring the parking space. These are also not subsequently taken into account when calculating the parking procedure. In some circumstances, Active Parking Assist may prematurely guide you into the parking space or brake too late.

Certain environmental conditions, such as snowfall or heavy rain, may lead to a parking space

being mismeasured. Parking spaces that are partially occupied by trailer drawbars might not be identified as such or may be measured incorrectly. Only use Active Parking Assist on level road surfaces with adequate grip.

 **WARNING** Risk of accident due to objects located above or below the detection range of Active Parking Assist

If there are objects above or below the detection range, the following situations may arise:

- Active Parking Assist may steer too early.
- The vehicle may not stop in front of these objects.

There is a danger of collision!

 In these situations, do not use Active Parking Assist.

Active Parking Assist can also display unsuitable parking spaces, e.g. parking spaces in which parking is not permitted or on unsuitable surfaces.

Do not use Active Parking Assist in the following situations:

- In extreme weather conditions, such as ice, packed snow or in heavy rain.
- When transporting a load that protrudes beyond the vehicle.
- If the parking space is on a steep downhill or uphill gradient.
- When snow chains are fitted.
- When a trailer or bicycle rack is attached
- Directly after a tyre change or when spare tyres are fitted.
- If the tyre pressure is too low or too high.
- On steep inclines of more than approximately 15 %.
- If the vehicle level has been offset, e.g. mounting the kerb on one side (vehicles with level control)

Parking with Active Parking Assist

⚠ WARNING Risk of accident due to objects located above or below the detection range of Active Parking Assist

If there are objects above or below the detection range, the following situations may arise:

- Active Parking Assist may steer too early.
- The vehicle may not stop in front of these objects.

There is a danger of collision!

- ▶ In these situations, do not use Active Parking Assist.

▶ Press button ①.

Parking Assistance menu (example)

▶ Select **Parking Assistance** ② menu.

Parking spaces ③ detected by the system are shown on the central display.

Parking Assistance menu (example)

When the vehicle is at a standstill, the indicated vehicle path ④ into the currently selected parking space ⑤ also appears.

- ▶ If a parking space is displayed: stop the vehicle.
- ▶ If necessary, select another parking space.
- ▶ **Vehicles with 360° camera:** to change the parking direction, tap the selected parking space again.
- ▶ **To start the parking procedure:** press button ① again.

- ▶ Take your hands off the steering wheel. The vehicle drives into the selected parking space.

The turn signal indicator is switched on automatically when the parking procedure begins. You are responsible for selecting the turn signal indicator in accordance with the traffic conditions. If necessary, select the turn signal indicator accordingly.

⚠ WARNING Risk of accident due to vehicle swinging out while parking or pulling out of a parking space

While parking or exiting a parking space, the vehicle swings out and can drive onto areas of the oncoming lane.

This could cause you to collide with objects or other road users.

- ▶ Pay attention to objects and other road users.
- ▶ Where necessary, stop the vehicle or cancel the parking procedure with Active Parking Assist.

Following completion of the parking procedure, the **Active Parking Assist finished** display message appears.

- ▶ Secure the vehicle against rolling away. When necessitated by legal requirements or local conditions: turn the wheels towards the kerb.
- ⓘ You can stop the vehicle and change the transmission position during the parking procedure. The system then calculates a new vehicle path. If no new vehicle path is available, the transmission position can be changed again, or the process can be cancelled.

■ Exiting a parking space with Active Parking Assist

⚠ WARNING Risk of accident due to objects located above or below the detection range of Active Parking Assist

If there are objects above or below the detection range, the following situations may arise:

- Active Parking Assist may steer too early.
- The vehicle may not stop in front of these objects.

There is a danger of collision!

- ▶ In these situations, do not use Active Parking Assist.

Requirements

- The vehicle is equipped with a 360° camera.
- The vehicle has been parked with Active Parking Assist.

- ▶ Start the vehicle.

- ▶ Press button ①.

Parking Assistance menu (example)

- ▶ Select **Parking Assistance** ② menu.
- ▶ If necessary, change direction of exit ③.
- ▶ **To initiate the unparking procedure:** press button ① again.
- ▶ If necessary, change the transmission position. Observe any messages displayed on the driver display and central display. The vehicle moves out of the parking space.

The turn signal indicator is automatically switched on when the unparking procedure is initiated, and automatically switched off again when it is completed. You are responsible for selecting the turn

signal indicator in accordance with the traffic conditions. If necessary, select the turn signal indicator accordingly.

⚠ WARNING Risk of accident due to vehicle swinging out while parking or pulling out of a parking space

While parking or exiting a parking space, the vehicle swings out and can drive onto areas of the oncoming lane.

This could cause you to collide with objects or other road users.

- ▶ Pay attention to objects and other road users.
- ▶ Where necessary, stop the vehicle or cancel the parking procedure with Active Parking Assist.

After the parking space has been exited, a warning tone and the  **Active Parking Assist finished, take control of vehicle** message prompt you to take control of the vehicle. You have to accelerate, brake, steer and change gear yourself again.

If you do not react to the prompt to take control of the vehicle, the system will brake the vehicle to a standstill.

■ Pausing Active Parking Assist

⚠ WARNING Risk of accident due to objects located above or below the detection range of Active Parking Assist

If there are objects above or below the detection range, the following situations may arise:

- Active Parking Assist may steer too early.
- The vehicle may not stop in front of these objects.

There is a danger of collision!

- ▶ In these situations, do not use Active Parking Assist.

You can interrupt the parking or exiting procedure of Active Parking Assist by performing one of the following actions, for example:

- ▶ Depress the brake pedal.

- ▶ Open the front passenger door, a rear door, the tailgate or the bonnet.

- ▶ Apply the electric parking brake or activate the HOLD function.

- ▶ **To resume the parking or exiting procedure:** gently depress the accelerator pedal.

- ⓘ If the electric parking brake was applied before Active Parking Assist was activated, depress the accelerator pedal lightly to start the parking or exiting procedure.

Check the area around your vehicle again before resuming a paused parking procedure. Ensure that persons, animals or objects are no longer in the manoeuvring range. Also, observe the system limits of Active Parking Assist.

Automatic braking function of Active Parking Assist

⚠ WARNING Risk of accident due to objects located above or below the detection range of Active Parking Assist

If there are objects above or below the detection range, the following situations may arise:

- Active Parking Assist may steer too early.
- The vehicle may not stop in front of these objects.

There is a danger of collision!

- ▶ In these situations, do not use Active Parking Assist.

Persons or objects detected in the manoeuvring range could cause the vehicle to brake sharply and interrupt the parking or exiting procedure. The vehicle will then be held at a standstill. The parking or exiting procedure is resumed if you depress the accelerator pedal.

Check the area around your vehicle again before resuming the parking or exiting procedure. Ensure

that persons, animals or objects are no longer in the manoeuvring range. Also, observe the system limitations of Active Parking Assist.

Manoeuvring assistant

Function of Drive Away Assist

Drive Away Assist can reduce the severity of an impact when pulling away. If an obstacle is detected in the direction of travel, the vehicle's speed is briefly reduced to approx. 2 km/h. When a critical situation is detected, the symbol  appears in the central display.

Drive Away Assist can be switched off or on in the menu [Manoeuvring assistance](#).

- ⓘ You can cancel an intervention by Drive Away Assist at any time by deactivating Parking Assist PARKTRONIC.

⚠ WARNING Risk of accident caused by limited detection performance of Drive Away Assist

Drive Away Assist cannot always clearly identify objects and traffic situations.

- ▶ Always pay careful attention to the traffic situation; do not rely on Drive Away Assist alone.
- ▶ Be prepared to brake or swerve as necessary, provided the traffic situation permits and that it is safe to take evasive action.

Drive Away Assist is only an aid. It is not a substitute for you paying attention to the surroundings. The responsibility for safe manoeuvring and parking remains with you. Make sure that no persons, animals or objects etc. are in the manoeuvring range.

A risk of a collision may arise in the following situations, foreexample:

- If the driver mixes up the accelerator and brake pedals.
- If an incorrect transmission position is engaged.

The Drive Away Assist function is active under the following conditions:

- If Parking Assist PARKTRONIC is activated.

- If you shift the transmission position to **R** or **D** when the vehicle is stationary.
- If the detected obstacle is less than approx. 1.0 m away.
- Manoeuvring assistant is activated (→ page 326).

System limits

The performance of Drive Away Assist is limited on inclines.

Drive Away Assist is not available if a transport device, e.g. a trailer or bicycle rack is attached to the trailer hitch, and the electrical connection is correctly established.

- ⓘ Also, observe the system limits of Parking Assist PARKTRONIC (→ page 314).

Function of Cross Traffic Alert

- ⓘ The Cross Traffic Alert function is only available for vehicles with Blind Spot Assist.

The Cross Traffic Alert function can warn drivers of any crossing traffic when reversing and manoeuvring out of a parking space. The radar sensors in the bumper also monitor the area adja-

cent to the vehicle. If a critical situation is detected, the  symbol appears on the central display and the vehicle can be braked automatically. If the radar sensors are obstructed by vehicles or other objects, detection is not possible.

The Cross Traffic Alert function can be switched on or off in the **Manoeuvring assistance** menu depending on the respective country (→ page 326).

The Cross Traffic Alert function is active under the following conditions:

- The vehicle is reversing at walking pace.
- Manoeuvring assistant is activated (→ page 326).
- ⓘ Observe also the instructions on Blind Spot Assist (→ page 302).

System limits

The Cross Traffic Alert function is not available on inclines.

If a transport device, e.g. trailer or bicycle rack is attached to the trailer hitch and the electrical

connection is correctly established, the Cross Traffic Alert function is not available.

Function of close-range braking

Close-range braking can prevent collisions with pedestrians when the vehicle is reversing at slow speeds. If the reversing camera detects a person in the vehicle's path, the vehicle can be braked to a standstill.

Close-range braking can intervene under the following conditions:

- The vehicle is reversing at a speed slower than 10 km/h.
- The camera image is shown in the central display (→ page 314).

Depending on the country, close-range braking can be deactivated or activated in the **Manoeuvring assistance** menu (→ page 326).

When close-range braking is triggered, the symbol  appears in red in the selected view in the menu **Camera & parking**.

- ⓘ If close-range braking is not available, the symbol  appears in grey.

Close-range braking serves solely as an aid. It is not a substitute for you having to pay attention to your surroundings. The responsibility for safe manoeuvring and parking remains with you. Ensure that no persons, animals or objects etc. are in the manoeuvring range.

⚠ WARNING Risk of accident caused by limited detection by the manoeuvring brake function

The manoeuvring brake function cannot always clearly detect people. Other obstacles are not detected by the function.

In these cases, the function may brake unnecessarily or not brake at all.

- ▶ Always pay careful attention to the traffic situation; do not rely on the manoeuvring brake function alone.
- ▶ Be ready to brake.

System limits

Observe the system limits of the following functions:

- Active Parking Assist (→ page 318)
- 360° camera (→ page 310)
- Reversing camera (→ page 306)

The close-range braking function is not available in the following situations:

- on inclines
- If transport equipment, foreexample a trailer or bicycle rack, is attached to the trailer hitch and the electrical connection has been correctly established.

You can watch an animation on this topic via the following link:

Activating/deactivating manoeuvring assistance

Multimedia system:

→  ▶▶ Settings ▶▶ Assistance
▶▶ Parking

- ⓘ This function is an on-demand feature (→ page 67).
- ⓘ The Activating/deactivating Manoeuvring assistance function is not available in all countries.
- ▶ Select **Manoeuvring assistance**.
- ▶ Activate or deactivate the desired manoeuvring assistance.

Trailer hitch

Notes on trailer operation

! **NOTE** The operating permit may be invalidated due to the illegal installation of trailer hitches

The installation – including retrofitting – of a non-folding or non-removable trailer hitch that even partially conceals the license plate or the lighting system is prohibited.

▶ Observe the applicable legal regulations for the installation of trailer hitches.

! **WARNING** Risk of accident due to car/trailer combination swerving

If you drive too fast in trailer operation, the car/trailer combination may start to swerve.

This could cause you to lose control of the car/trailer combination. The car/trailer combination may even overturn.

- ▶ Under no circumstances should you try to straighten the car/trailer combination by increasing your speed.
- ▶ Reduce the speed and do not counter-steer.
- ▶ Brake if necessary.

Retrofitting a trailer hitch is permissible only if a trailer load is specified in your vehicle documents. If this is not the case, the vehicle is not approved for trailer operation.

Further information can be obtained at a qualified specialist workshop.

Observe the following notes on the tongue weight:

- do not use a tongue weight that exceeds or falls below the permissible tongue weight
- use a tongue weight as close as possible to the maximum tongue weight

Do not exceed the following values:

- Permissible trailer load
- Permissible rear axle load of the towing vehicle

- Permissible gross mass of the towing vehicle
- Permissible gross mass of the trailer
- Maximum permissible speed of the trailer

Ensure the following before starting a journey:

- the tyre pressure on the rear axle of the towing vehicle is set for a maximum load
- the lighting of the connected trailer is operational
- **vehicles without LED headlamps or MULTI-BEAM LED headlamps:** the headlamps have been set correctly

In the event of increased rear axle load, the car/trailer combination may not exceed a maximum speed of 100 km/h for reasons concerning the operating permit. This also applies in countries in which the permissible maximum speed for car/trailer combinations is above 100 km/h.

Folding the ball neck out and in

⚠ WARNING Risk of accident due to the ball neck not being engaged

If the ball neck is not engaged, the trailer may come loose.

- ▶ Always engage the ball neck as described.

⚠ WARNING Risk of injury from ball neck swinging outwards

The ball neck may swing outwards when unlocking or when it has not been properly engaged.

There is a risk of injury within the ball neck's range of movement!

- ▶ Unlock the ball neck only when its range of movement is unobstructed.
- ▶ Always be sure the ball neck is engaged when folding inwards.

! NOTE Increased risk of damage to property due to folded-out ball neck

- ▶ When the trailer is not coupled or the bicycle rack is attached, fold in the ball neck or, in the case of a fully electric trailer hitch, retract the ball neck.

! NOTE Damage to the vehicle due to incorrect use of the trailer hitch

If a trailer hitch is used to recover the vehicle, the vehicle or the trailer hitch itself may be damaged in the process.

- ▶ Use the trailer hitch only for pulling a trailer or attaching approved carrier systems (e.g. a bicycle rack).

Exception: Since vehicles with a trailer hitch do not have a fixture for a towing eye at the rear, towing or tow-starting is permitted.

- ▶ When towing or tow-starting with the trailer hitch, observe the information in the section "Fitting and removing the towing eye."

Folding the ball neck out

- ▶ Secure the vehicle against rolling away.
- ▶ Keep the swivel range clear.
- ▶ Remove the trailer cable or adapter plug.
- ▶ Pull switch ② until the ball neck unlocks. The ball neck will fold out from under the rear bumper.
- ▶ Indicator lamp ① will flash.

- ▶ Pull the ball neck in the direction of the arrow until it engages audibly in a vertical position. Indicator lamp ① on the ball neck release switch will go out.

If the ball neck is not securely locked in place, the **Trailer coupling Check lock** message will appear on the driver's display.

- ▶ Remove the cover cap from the ball head and store it in a safe place.

Make sure that the ball on the ball neck is clean. Check that it is either greased or dry (grease-free), depending on the instructions for the trailer.

Folding the ball neck in

- ▶ Pull switch ② until the ball neck unlocks. The ball neck will fold up under the rear bumper. Indicator lamp ① will flash.

- ▶ Push the ball neck in the direction of the arrow until it engages audibly behind the bumper. Indicator lamp ① will go out and the message on the driver's display will disappear.

Observe the information about indicators on the driver's display:

- Indicator and warning lamps (→ page 739)

- Display messages (→ page 675)

Coupling up/uncoupling a trailer

The trailer will be correctly detected by the vehicle only if the following conditions are met:

- The ball neck is extended and engaged in a securely locked position.

Trailers with a 7-pin plug can be connected to the vehicle with the following adapters:

- adapter plug
- adapter cable

The trailer will be correctly detected by the vehicle only if the following conditions are met:

- the trailer is connected correctly
- the trailer lighting system is in working order

A correctly connected trailer influences, among other things, the functions of the following systems:

- ESP® trailer stabilisation
- Active Lane Keeping Assist

- Parking Assist PARKTRONIC
- Active Parking Assist
- Blind Spot Assist
- Drive Away Assist
- Cross Traffic Alert
- Manoeuvring brake function
- Reversing camera
- 360° Camera

Coupling up a trailer

! **NOTE** Damage to the starter battery due to full discharge

Charging the trailer battery using the power supply of the trailer can damage the starter battery.

▶ Do not use the vehicle's power supply to charge the trailer battery.

- ▶ Secure the vehicle against rolling away.
- ▶ Remove the cover cap from the ball head and store it in a safe place.

- ▶ Position the trailer on a level surface behind the vehicle and couple it up to the vehicle.

- ▶ Open the socket cap.
- ▶ Insert the plug with lug ① in groove ③ on the socket.
- ▶ Turn bayonet coupling ② to the right as far as it will go.
- ▶ Let the cap engage.
- ▶ Secure the cable to the trailer with cable ties (only if you are using an adapter cable).
- ▶ Make sure that the cable is always slack for ease of movement during cornering.

In the following circumstances, a message may appear on the driver's display even if the trailer has been connected correctly:

- LEDs have been installed in the trailer lighting system.
 - The current has fallen below the trailer lighting system's minimum current (50 mA).
- i** Accessories can be connected to the permanent power supply up to 180 W and to the power supply that is switched on via the ignition lock.

Uncoupling a trailer

⚠ WARNING Risk of being crushed and becoming trapped when uncoupling a trailer

When uncoupling a trailer with an engaged inertia-activated brake, your hand may become trapped between the vehicle and the trailer drawbar.

- ▶ Do not uncouple trailers with an engaged overrun brake.

! **NOTE** Damage during uncoupling with an engaged overrun brake

The vehicle may be damaged if you uncouple with an engaged overrun brake.

- ▶ Do not uncouple trailers with an engaged overrun brake.

- ▶ Secure the vehicle against rolling away.
 - ▶ Disconnect the electrical connection between the vehicle and the trailer.
 - ▶ Uncouple the trailer.
 - ▶ Place the cover on the ball head.
- i** **Trailers with LED lighting:** after uncoupling the trailer, switch the vehicle on and then off again.

Selecting a trailer type

Multimedia system:

→  ▶▶ Settings ▶▶ Vehicle ▶▶ Driving ▶▶ Trailer type

Configuring settings for a trailer

The settings on this menu make it possible to calculate a route suitable for the selected trailer and optimise the calculated arrival time.

- ▶ Select the desired trailer type.
 - ▶ Select the maximum permissible speed of the selected trailer.
 - ▶ **To save changes:** select **Confirm**.
- i** When contact with the trailer socket is established (trailer/rear bicycle rack), a menu will automatically appear on the display.

The following options are available:

- Bicycle rack
- Small trailer
- Large trailer

Bicycle rack function

⚠ WARNING Risk of an accident if the bicycle rack is used incorrectly

The bicycle rack may become detached from the vehicle in the following cases:

- the permissible load capacity of the trailer hitch is exceeded.
- the bicycle rack is used incorrectly.
- the bicycle rack is secured to the ball neck beneath the ball head.

Observe the following for your own safety and that of other road users:

- always adhere to the permissible load capacity of the trailer hitch.
- always observe the permissible rear axle load of the towing vehicle.
- use the bicycle rack only to transport bicycles.
- always properly secure the bicycle rack by attaching it to the ball head.

- use only bicycle racks approved by Mercedes-Benz.
- always observe the bicycle rack operating instructions.

⚠ NOTE Damage to or breakage of the trailer hitch due to unsuitable or improperly used bicycle rack.

▶ Only use bicycle racks approved by Mercedes-Benz properly as described below.

⚠ NOTE Increased risk of damage to property due to folded-out ball neck

▶ When the trailer is not coupled or the bicycle rack is attached, fold in the ball neck or, in the case of a fully electric trailer hitch, retract the ball neck.

⚠ NOTE The operating permit may be invalidated due to the illegal installation of trailer hitches

The installation – including retrofitting – of a non-folding or non-removable trailer hitch that even partially conceals the license plate or the lighting system is prohibited.

▶ Observe the applicable legal regulations for the installation of trailer hitches.

Depending on the bicycle rack's design, up to three bicycles can be transported on the bicycle rack.

When mounted by being attached to ball head ①, the maximum load capacity is 75 kg.

The maximum load capacity is calculated from the weight of the bicycle rack and the bicycle rack load.

Observe the notes on driving with a roof load, trailer or fully laden vehicle (→ page 219).

When using a bicycle rack, set the tyre pressure for increased load on the rear axle of the vehicle. Further information on the tyre pressure can be found in the tyre pressure table (→ page 532).

Notes on loading

The larger the distance between the load's centre of gravity and the ball head, the greater the load on the trailer hitch.

Therefore, observe the following notes:

- mount heavy bicycles as close to the vehicle as possible
- always distribute the load on the bicycle rack as evenly as possible across the vehicle's longitudinal axis

Mercedes-Benz recommends removing all detachable parts from bicycles (e.g. baskets, child seats, rechargeable batteries) before loading them onto the bicycle rack. This will improve the aerodynamic resistance and centre of gravity of the bicycle rack.

Always secure the bicycles to prevent them from moving around and check them at regular intervals to ensure that they are secure.

Do not use tarpaulins or other covers. The driving characteristics and rear view may be impaired. In addition, aerodynamic resistance and the load on the trailer hitch will increase.

Load distribution on the bicycle rack

- ① Vertical distance between centre of gravity and ball head
- ② Horizontal distance between centre of gravity and ball head
- ③ The centre of gravity is on the vehicle's centre axis

Observe the following information when you are loading the bicycle rack with up to three bicycles:

Loading the bicycle rack

Total weight of bicycle rack and load	Max. distance ^①	Max. distance ^②
Up to 75 kg	420 mm	300 mm

Vehicle towing instructions

The vehicle is not suitable for the use of tow bar systems that are used for flat towing or dinghy towing, for example. Attaching and using tow bar systems may result in damage to the vehicle. When you are towing a vehicle with tow bar systems, safe driving characteristics cannot be guaranteed for the towing vehicle or the towed vehicle. The vehicle-trailer combination may swerve from side to side.

Observe the following information:

- Permitted towing methods (→ page 521)

- The notes on towing the vehicle with both axles on the ground (→ page 44)

Notes on the driver display

⚠ WARNING Risk of accident if the driver's display fails

If the driver's display fails or malfunctions, you may not be aware of any functional limitations to safety-critical systems. This may affect the operating safety of the vehicle.

- ▶ Park the vehicle safely as soon as possible and notify a qualified specialist workshop.

If the operating safety of your vehicle is impaired, park the vehicle immediately and safely. Contact a qualified specialist workshop.

Additional functions available include the following:

- Various menus, such as [Assistance](#) and [Navigation](#)
- Status displays for the driving systems
- Display messages

Some menu content and settings can be changed (→ page 337).

Notes on the range

The range in general

- All ranges shown are assumptions based on various calculation bases. The actual range achieved may differ from the range displayed.
- Outside temperatures, climate control settings, vehicle interior temperatures, road conditions, driving style etc. directly influence the achievable range.
- Pay attention to the charging prompts at all times.

Range according to personal driving style

- Your previous individual consumption will be taken into account when the range is being calculated.
- While the navigation system or commuter route is active, additional information about the route ahead can be included in the range calculation.
- When the trip computer [From reset](#) is reset, the data on the previous driving style will also

be deleted and calculated afresh from this point on.

Range with low consumption

- The maximum range shows the potential range when consumption is low, e.g. as a result of economical driving or having the air conditioning system turned off.

Range with high consumption

- The minimum range shows the range when consumption is high, e.g. as a result of a sporty driving style or having the air conditioning system turned on.
- This range is determined based on past and current consumption figures.
- When the trip computer [From reset](#) is reset, the data on the previous driving style will also be deleted and calculated afresh from this point on.

Electrical consumption

- The consumption figures [From start](#) and [From reset](#) take into account all active con-

sumer equipment when it comes to the drive system's operational readiness **READY**.

Operating the driver display

⚠ WARNING Risk of distraction from information systems and communications equipment

If you operate information systems and communication devices integrated in the vehicle when driving, you could be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- ▶ Only operate this equipment when the traffic situation permits.
- ▶ If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

Observe the legal requirements for the country in which you are currently driving when operating the driver display.

Scrolling on the menu bar

- ① Back button
- ② Main menu button
- ③ Touch Control

You can manage the content of the driver display with the controls on the left of the steering wheel. You can navigate the content by swiping vertically and horizontally with one finger on Touch Control

③. Press the Touch Control to confirm your selection.

ⓘ To operate Touch Control ③ in the most effective way, use the tip of your thumb if possible. You can also set the sensitivity of the Touch Control on the central display (→ page 360).

▶ Briefly press main menu button ②.

▶ Select a menu by swiping to the left or right on Touch Control ③.

▶ **To confirm:** press Touch Control ③.

You can watch an animation on this topic via the following link:

Driver display menus

Notes on menus on the driver display

⚠ WARNING Risk of distraction from information systems and communications equipment

If you operate information systems and communication devices integrated in the vehicle when driving, you could be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- ▶ Only operate this equipment when the traffic situation permits.
- ▶ If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

Observe the legal requirements for the country in which you are currently driving when operating the driver display.

The following menus can be called up via the menu bar on the driver display:

- **Understated**
- **Sport**
- **Classic**
- **Navigation**
- **Assistance**
- **Offroad** (vehicles with 4MATIC)
- **Service**

On some of these menus, you can choose from a range of information for the centre display content.

On most of the menus, you can use **Options** to configure further settings for the menu-specific display content.

You can watch an animation on this topic via the following link:

Calling up and operating menus on the driver display

Calling up a menu on the driver display

- ① Back button
- ② Main menu button
- ③ Touch Control

- ▶ Press main menu button ② on the steering wheel.
The menu bar will be shown in the lower area of the driver display.

- ▶ Swipe to the left or right on Touch Control ③ and select a menu (e.g. the **Classic** menu) on the menu bar.
- ▶ **To confirm:** press Touch Control ③.

Calling up or exiting the **Options** submenu

- ▶ **To call up:** press Touch Control ③.
- ▶ **To exit:** press back button ①.

Browsing through display content or lists

- ▶ Swipe vertically or horizontally on Touch Control ③.
- ① On some menus, an index character will be displayed at the right edge of the centre display content to indicate how the information has been sorted.

Presetting displays

You can preset individually configured information of a menu and thus determine the standard display.

- ▶ Press Touch Control ③ until the bar is completely filled.
Answer the **Set direct entry?** query as follows.
- ▶ Swipe to the left on Touch Control ③ and select **Yes**.
- ▶ **To confirm:** press Touch Control ③.
- ▶ **To call up presettings:** press back button ① on the upper level of a menu.
- ① Pressing back button ① on the standard display will open the previous menu.

Resetting values

- ▶ **To call up the Options submenu:** press Touch Control ③.
- ▶ Select **Yes**.
- ▶ **To confirm:** press Touch Control ③.

Classic or Understated menu

Driver display:

↳ **Classic**

Information for selecting the centre display content

The **Classic** menu shows the driver display separated into speedometer and power availability display. The area in between can be filled with various types of information.

- ① Speedometer
- ② Recommended maximum speed when range monitoring and route guidance are active
- ③ Digital speedometer
- ④ Display area for output
- ⑤ Display area for recuperated power (recuperation)
- ⑥ Outside temperature
- ⑦ Centre display content (example: trip computer)
- ⑧ Time
- ⑨ Charge level display

- ⑩ Range according to personal driving style (→ page 335)
- ⑪ Range when consumption is low (→ page 335)

The following information can be shown in the centre display content ⑦:

- Trip and total distance
- Distance **From start** and **From reset**
- ECO display
- Range trend display
- Current consumption
- ATTENTION ASSIST
- Audio
- Navigation (with changing navigation instructions)

The following values will be displayed for trip computer ⑦:

- Distance covered in electric mode
- Electric energy consumption
- Driving time

- Average speed
- ▶ Swipe upwards or downwards on the Touch Control and select the display content.

Observe the following notes on the **Classic** menu:

- Recommended maximum speed ② ensures that the destination is reached with active route guidance. The state of charge that is desired and entered will be taken into account. If it becomes necessary to limit the vehicle's speed to reach the destination safely with the specified state of charge, the recommended maximum speed will be displayed on the speedometer. A message will also appear on the driver display.
Please note that despite recommended maximum speed ②, the maximum permissible speed must not be exceeded.
- Display ⑤ will change when intelligent recuperation is activated (→ page 222).

Changing the radio station or track on the station or track list

You can change radio stations or tracks on the station or track list in the centre display content with audio information.

The following will be adjusted in the MBUX multimedia system:

- Configuring the radio station and track lists.
- Switching between tracks
- Setting the frequency band

- ① Track list in the centre display content (example)

- ▶ **To change radio stations or tracks:** swipe left or right on the Touch Control and select a radio station or track on the station or track list ①.

① The radio station or track displayed when the vehicle is restarted depends on the user profile used for the previous trip.

The following functions may be available on the **Options** submenu, for example:

- Navigation: selecting and adjusting zoom, route guidance and map settings
- Resetting the trip odometer
- Resetting the trip computer **From start**
- Resetting the trip computer **From reset**
- Resetting the ECO display values

Changing colour settings on the **Understated** menu

- ▶ Call up the **Understated** menu via the driver display menu bar.
- ▶ **To call up the colour list:** press the Touch Control.

- ▶ **To select colour settings:** swipe upwards or downwards on the left-hand Touch Control and select the colour setting.

▶ Press the Touch Control to confirm.

- ▶ **To exit the colour list:** press the back button .

① Depending on the equipment, the selected colour adjustment will be adopted for the ambient lighting and the MBUX multimedia system. When you select the **Understated** menu on the driver display, the content in the MBUX multimedia system will also be reduced.

Service menu

Driver display:

 **Service**

The current status of the vehicle is shown on the **Service** menu.

- ▶ **To call up the menu:** press the Touch Control.

The following display content is available on the **Service** menu (equipment-dependent):

- Information about how many messages are in the message memory
- **Tyre pressure:**
 - Checking the tyre pressure with the tyre pressure monitoring system (→ page 533)
 - Restarting the tyre pressure monitoring system (→ page 534)
- **ASSYST PLUS:** calling up the service due date (→ page 492)
- Temperature display (high-voltage battery, front and rear high-voltage motors)

The following functions are available on the **Options** submenu:

- Tyre pressure (→ page 533)
- Message memory (→ page 675)

Assistance menu

Driver display:

The Assistance menu displays various driver assistance systems and navigation instructions.

- ▶ **To call up the display:** select **Assistance** on the driver display.
- ▶ Press the Touch Control.

Active Distance Assist DISTRONIC indicator on the assistant display (example)

The following displays may vary depending on the driving situation:

- The navigation instructions in the left-hand display section
- The traffic light view in the right-hand display section
- The display of the driver assistance systems
- The level of detail on the assistant display

The following status displays are available on the assistant display:

- Green: pedestrian detection active
- Grey: pedestrian detection enabled
- Green radar waves next to vehicle: Blind Spot Assist is enabled and ready for operation
- Grey radar waves next to vehicle: Blind Spot Assist is enabled but not ready for operation

The content on the assistant display will adapt to the following situations:

- Number of lanes detected
- Change of direction, e.g. lane change

- Current road conditions
- Road users detected

i The assistant display will not display other detected obstacles with the exception of road users.

The following functions are available on the **Options** submenu:

- Starting route guidance
- With active route guidance: end route guidance
- Call up previous destinations and favourites
- Start new route guidance to a recent destination
- Start new route guidance to a favourite

Sport menu

Driver display:

→ Sport

The **Sport** menu shows information about electric mode.

▶ To call up the menu: press the Touch Control.

- 1 Maximum available output
- 2 Current output
- 3 Recuperative braking
- 4 G-force display
- 5 Selected recuperation level
- 6 Range trend display
- 7 State of charge of the high-voltage battery

The range indicator on the driver display will vary depending on the menu selected.

Display content for range

- 1 Range when consumption is high (→ page 335)
- 2 Range according to personal driving style (→ page 335)
- 3 Range when consumption is low (→ page 335)

Off-road menu

Driver display:

Among other things, the menu shows the following information:

- Steering angle
- Elevation above sea level
- Compass with direction of travel
- Coordinates

▶ **To call up the menu:** press the Touch Control.

Navigation menu

Driver display:

The **Navigation** menu shows the relevant map with navigation instructions.

▶ **To call up the menu:** press the Touch Control.

Changing the scale of the selected map view

- ① Distance to the change of direction
- ② Road to which the change of direction leads
- ③ Traffic incident indicator
- ④ Currently selected route
- ⑤ Indicator showing vehicle's current position
- ⑥ Change-of-direction symbol
- ⑦ Recommended lane (white)
- ⑧ Lane not recommended (grey)
- ⑨ Current lane

① The level of detail in the navigation instructions in the left-hand display section may vary.

▶ **To zoom in and out on the map directly:** swipe upwards or downwards on the Touch Control.

① If you do not operate anything in Autozoom, the system will reset the scale of the map view already selected after a short time. You can set the map scale permanently in the MBUX multimedia system (→ page 423).

The following functions are available on the **Options** submenu:

- With active route guidance: end route guidance
 - Select route guidance
 - **Map settings**
- ① If the current route guidance is ended on the **Navigation** menu of the driver display, it will also be ended in the MBUX multimedia system.

On the **Options** submenu, you can use other functions in the **Destinations** and **Map settings** categories.

You can use the following functions in the **Destinations** category:

- Call up previous destinations and favourites
- Start new route guidance to a favourite

i The two options **Work** and **Home** will be displayed in **Favourites** even if no address is stored.

You can use the following functions in the **Map settings** category:

- Activate auto zoom
- Set the map view, satellite view and route overview.

The following map views are available on the **Navigation** menu:

- Entire route
- 2D direction of travel
- 2D north-up
- 3D map

Head-up display

Function of the head-up display

The head-up display projects various content into the driver's field of vision, for example.

You can use the head-up display menu bar to select different contexts, e.g.:

- Minimal
- **Sport**
- **Standard**
- **Offroad** (vehicles with 4MATIC)
- Settings
- Head-up display on/off

Head-up display content with navigation (6x2°)

- 1 Detected instructions and traffic signs
- 2 Navigation instructions (distance to the next route event)
- 3 Steer Assist status
- 4 Current speed
- 5 Set speed in the driving system (e.g. Active Distance Assist DISTRONIC)

System limits

Visibility is influenced by the following conditions in particular:

- Seat position

- Image position setting
- Light conditions
- Wet road surfaces
- Objects on the display cover
- Polarisation in sunglasses

You can watch an animation on this topic via the following link:

Operating the head-up display

Selecting display content of the head-up display via the menu bar of the driver display

- ▶ Press the main menu button .
- ▶ **To select the menu bar of the head-up display:** swipe upwards on the Touch Control.

Switching between display content on the head-up display

- ▶ Swipe to the left or right on the Touch Control. A preview of the selected display content will appear on the head-up display.
- ▶ **To confirm:** press the  button.

Switching back to the driver display

- ▶ Press the  or  button.

Setting the position and brightness

- ▶ Swipe to the left or right on the Touch Control and select **Settings** on the menu bar of the head-up display.

- ▶ Press the Touch Control. The current position and brightness settings will be displayed as graphics on the head-up display as well as on the driver display.
- ▶ **To adjust the position:** swipe upwards or downwards on the Touch Control.
- ▶ **To adjust the brightness:** swipe to the left or right on the Touch Control. The settings configured for position and brightness will be saved automatically.
- ▶ Press the  or  button to exit the settings.

Switching the head-up display on/off

Driver display:

Switching on

- ▶ Swipe upwards on the Touch Control.
- ▶ Press Touch Control .

Switching off

- ▶ Swipe upwards on the Touch Control.

- ▶ Swipe on the Touch Control and select **Head-up display**.
- ▶ Press Touch Control **OK**.

Function of the power availability display

- ① Current output
- ② Available operating energy output
- ③ Recuperated energy (recuperation)
- ④ Recuperation level set

The maximum operating energy output is available in normal operating mode.

In the following cases, the operating energy output available may deviate from the maximum value:

- When the outside temperatures are very high or low
- In the event of very high output requests over an extended period of time
- When the high-voltage battery's state of charge is very low
- When the drive system is malfunctioning

The values displayed serve only as guidance. The operating energy output value displayed may deviate from the actual value.

When maximum recuperated power ③ is reached, the additional desired deceleration will be set via the brake control system. Also brake with the service brake if necessary.

Overview of status indicators on the driver display

The status indicators for the driving and driving safety systems can be found in display sections ① to ④.

① to ④.

 The number, position and presentation of the status indicators on the driver display depend on which systems are activated or deactivated.

-  Pedestrian detection (on assistant display only)
-  Active Parking Assist is available (→ page 320)
-  Active Parking Assist has detected a parking space (→ page 320)
-  Parking Assist PARKTRONIC deactivated (→ page 317)
-  Cruise control (→ page 273)
-  Limiter (→ page 274)
-  Active Distance Assist DISTRONIC (→ page 277)
-  Specified distance for Active Distance Assist DISTRONIC (→ page 277)
-  Active Brake Assist switched off (→ page 293)
-  Active Brake Assist impaired or not functioning (→ page 293)

-  Active Steering Assist (→ page 285)
-  Active Lane Keeping Assist (→ page 304)
-  Active Blind Spot Assist (on assistant display only)
-  Haptic accelerator pedal
-  HOLD function (→ page 270)
-  Adaptive Highbeam Assist (→ page 195)
-  Maximum permissible speed exceeded (for certain countries only)
-  Active Stop-and-Go Assist
-  Slippery road surface warning

Vehicles with Speed Limit Assist: detected instructions and traffic signs (→ page 293)

Vehicles with Traffic Sign Assist: detected instructions and traffic signs (→ page 297)

Important information from other driving systems may briefly appear in front of the displayed traffic signs.

Notes on operating safety

For your own safety, always observe the following points when operating mobile communications equipment and especially your voice control system:

- Observe the legal requirements for the country in which you are driving.
- If you use the voice control system in an emergency your voice can change and your telephone call, e.g. an emergency call, can thereby be delayed.
- Familiarise yourself with the voice control system functions before starting the journey.

The voice control system does not replace the Owner's Manual.

The answers from the voice control system do not provide the complete scope of information contained in the Owner's Manual. The voice control system also does not give detailed warning or damage information. Therefore read the Owner's Manual so that you are fully informed about the functions and the safe operation of the vehicle.

Operation

Function of the MBUX Voice Assistant

You can watch an animation on this topic via the following link:

Using the MBUX Voice Assistant, vehicle functions and various areas of the MBUX multimedia system can be operated by voice input, e.g. Navigation or Telephone. The MBUX Voice Assistant is operational about half a minute after switching on the vehicle and can be operated from all seats (depending on the special equipment).

Conducting a dialogue

Requirements

- Voice activation is activated in the multimedia system (→ page 349).
- For corrections during output, the **Voice barge-in** option must be activated in the multimedia system (→ page 349).

Starting a dialogue

▶ Say Hey Mercedes to activate the MBUX Voice Assistant.

or

▶ Press the  button on the multifunction steering wheel.
A wave appears in the MBUX multimedia system. The dialogue can be started.

For the dialogue with the MBUX Voice Assistant, you can use complete sentences of colloquial language as voice commands. Voice activation can also be combined directly with a voice command, e.g. Hey Mercedes, how warm is it outside?

Interrupting the dialogue

▶ During the dialogue say Pause.
The dialogue is interrupted.

▶ Say Hey Mercedes to continue the dialogue.

Correcting an entry

▶ During the dialogue say Correction.

or

▶ Interrupt the system's voice output.

Changing dialogue level

- ▶ During the dialogue, say **Back**.
The MBUX Voice Assistant jumps back to the previous dialogue step.
- ▶ During the dialogue, say **From the beginning again**.
The MBUX Voice Assistant jumps to the highest dialogue level.

Navigating in the selection list

If a voice command does not achieve a clear result, a selection list is shown.

- ▶ Say the line number or the content to select an entry or to have further details shown.
- ▶ Say **Next page** or **Previous page** to browse the selection list.

Calling up help

- ▶ **For information about the MBUX Voice Assistant:** say **Hey Mercedes, what can you do?**
- ▶ **Current application:** say **Help**.
You will receive suggestions and information about operation of MBUX Voice Assistant for the current application.

▶ **Specific function:** call up the voice command for the required function, for example with **Hey Mercedes, I need help with the radio**.

▶ **Digital Owner's Manual:** say **Show me the Owner's Manual**.
The full extent of the Digital Owner's Manual is available on the media display when the vehicle is stationary.

Overview of the operable functions of the MBUX Voice Assistant

You can use the MBUX Voice Assistant to operate the following functions depending on the vehicle equipment:

- Telephone
- Text message and e-mail
- Navigation
- Radio and media
- Vehicle functions
- Online functions

Full functionality of the voice control system is only available for you with activation of online voice control (→ page 349).

Information on the language setting

You can change the language of the MBUX Voice Assistant via the system language settings (→ page 380). If the set system language is not supported by the MBUX Voice Assistant, English will be selected.

Setting functions of MBUX Voice Assistant using the multimedia system

Multimedia system:

 ▶ Settings ▶ System
 ▶ Voice assistant

Switching voice activation of MBUX Voice Assistant on or off

- ▶ Select **Hey Mercedes**.
When the function is active, the **Hey Mercedes** voice command can activate the dialogue.

Switching direct commands on or off

- ▶ Select .
- ▶ Activate or deactivate the function. If the function is active, some commands can be used without Hey Mercedes, for example Next track.

Switching voice activation for individual seats on or off

- ▶ Select .
- ▶ Switch the function for the desired seats on or off.

Switching voice interruption on or off

- ▶ Select [Further settings](#).
- ▶ Select [Voice barge-in](#). If the function is active, a command can be interjected during voice output of the system.

Switching proactivity on or off

- ▶ Select [Further settings](#).

- ▶ Select the desired situation, e.g. [Activate your profile](#) or [Don't forget your phone](#). When the function is active, the voice assistant proactively provides information in specific situations.

Activating or deactivating online voice control

- ① Online voice control is activated at the factory.
- ▶ Select [Online recognition](#).
- ▶ Activate or deactivate the function. If the function is activated and a Mercedes me user account is linked to the vehicle, additional results are available through the provision of external information, e.g. information on POIs. By clicking the symbol in the wave, more information about the online voice control can be displayed.

Activating or deactivating contacts for online use

- ▶ Select [Contact upload for online recognition](#). When the function is active, contacts will be found more easily and accurately using voice input.

Using MBUX Voice Assistant effectively

Notes on optimum use of the MBUX Voice Assistant

- The MBUX Voice Assistant is operational half a minute after switching on the vehicle and can be operated from all seats, depending on the equipment installed. The system recognises from which seat the command was spoken and performs actions according to the seat position.
- When a dialogue is ended, the MBUX Voice Assistant continues to be active for as long as the wave is displayed in the multimedia system. You can say another voice command without saying **Hey Mercedes**.
- Using the direct command **Change language to English**, the system language can be changed to English without **Hey Mercedes**. Direct commands must be activated for this.
- If a user profile has been stored and is active, the MBUX Voice Assistant can make suggestions based on the habits of the user. If the voice commands are not clear, the system

selects an action. The action can be corrected with a new voice command.

Say **Hey Mercedes, load my personal profile**, to activate the profile. The user's voice must first be taught in by the system and assigned to a profile.

Further information on user profiles (→ page 367).

- With the MBUX Voice Assistant, incoming calls can be accepted or rejected without the keyword **Hey Mercedes**.

Information on the MBUX online voice assistant

The online voice control facilitates recognition and thanks to external information makes additional results available.

Therefore, Mercedes-Benz recommends that you activate online voice control (→ page 349).

You will need a Mercedes me user account for this. If you do not yet have a user account you must create one and connect it with your vehicle (→ page 460).

Then call up your Mercedes me user account. The Mercedes me services are shown and can be activated (→ page 460).

By clicking on the symbols displayed in the wave, further information on the online status is displayed.

When online voice control is active, additional functions are available such as:

- Weather
- General knowledge
- Public holidays and school holidays
- Smarthome
- Messages
- Time, date and time zones
- Pocket and currency calculator
- Football results and fixture lists
- Share prices
- Calendar
- ChitChat
- Horoscope
- Geo Quiz

- ⓘ The availability of these functions is country and equipment-dependent.
- ⓘ Text content is taken from Wikipedia in accordance with the CC BY-SA 3.0 licence.

Essential voice commands

Notes on voice commands

It is not necessary to use exact voice commands to call up a specific function. The MBUX Voice Assistant also understands you when you use your colloquial speech. Some examples are listed below. For some languages however these examples are only available to a limited extent.

Examples of voice commands:

- Navigation (→ page 352)
- Telephone (→ page 352)
- Radio and TV (→ page 352)
- Media player (→ page 354)
- Messages (→ page 354)
- Vehicle functions (→ page 354)
- Online functions (→ page 355)

Examples of navigation voice commands

You can operate the navigation system using the MBUX Voice Assistant. The following list offers just a small selection of the possible navigation commands. You will receive additional suggestions if you say **Help for navigation**.

- Drive me home.
- Where is the nearest service station?
- Is there a service area along the route?
- Set Covent Garden as intermediate destination.
- Cancel the route guidance.
- Show my last destination.
- I want to buy juice.
- Search for an Asian restaurant, but not Japanese, in South London.

Examples of telephone voice commands

You can operate phones connected with the MBUX multimedia system using the MBUX Voice

Assistant. The following list offers just a small selection of the possible telephone commands. You will receive additional suggestions if you say **Help for phone**.

- Call Peter Miller on the mobile phone.
- Dial 0711 17 0.
- Call my father.
- Accept call
- Reject call
- Search for the contact Peter Miller.
- Switch to address book
- Show me the incoming calls.
- Switch phone

Examples of radio and TV voice commands

Depending on the vehicle equipment, you can operate the radio and TV using the MBUX Voice Assistant. The following list offers just a small selection of the possible radio or TV voice com-

mands. You will receive additional suggestions if you say **Help for radio** or **Help for TV**.

- Play the radio station Heart FM.
- Next station.
- Previous station.
- Show me the list of radio stations
- Save the station
- What am I listening to?

Overview of radio voice commands

Radio voice commands can also be used when the radio application runs in the background and another application is visible in the foreground. The following list offers just a small selection of the possible radio voice commands. You will receive additional suggestions if you say **Help for radio**.

Radio voice commands

Voice command	Colloquial example	Function
Radio station <station name>	I'd like to select the radio station "Cool FM"	Selects the radio station.
Radio frequency <Frequency>	Go to station/radio frequency "eighty seven point five megahertz"	Enters a radio frequency, e.g. in the FM frequency band.
Next radio station	Call up the next radio station	Calls up the next radio station from the station list.
Previous station	Switch to the last radio station/to the previous program	Switches to the previous radio station.
Save radio station	Please save the radio station	Saves the radio station currently playing.
Show radio station list	Show me the list of all radio stations, please	Shows the radio list with the radio stations that can currently be received.
Read out channel list	I'd like to listen to the station list, please	Reads out the radio list with the radio stations that can currently be received.
Traffic information on	Switch on the traffic info	Switches on traffic announcements.
Traffic information off	I'd like to switch off traffic info	Switches off traffic announcements.
Radio info on	I want you to turn on additional radio station text	Switches on the radio text information for the radio station currently playing.

Voice command	Colloquial example	Function
Radio info off	I want you to turn off additional radio station text	Switches off the radio text information for the radio station currently playing.
Change to radio favourites	Please show me the list of all favourite radio stations	Shows the favourites with the saved radio stations.

Examples of media voice commands

You can operate connected media sources and online music using the MBUX Voice Assistant. The following list offers just a small selection of the possible media voice commands. You will receive additional suggestions if you say **Help for media** or **Help for player**.

- Play Michael Jackson.
- Play "Yellow Submarine" by the Beatles.
- Next track.
- Previous track.
- Play similar track.
- Repeat this track.
- Switch on random playback.

- Mute the music.
- Switch to USB.

Examples of message voice commands

Messages can be created, edited and listened to using the MBUX Voice Assistant. The following list offers just a small selection of the possible message voice commands. You will receive additional suggestions if you say **Help for messaging**.

- Write a text message to Jane Doe: When will the next meeting take place?
- Show me my new e-mails.
- Write an e-mail to Jane Doe.
- Read me my new text messages.

- Show all new text messages.
- Write an e-mail to John Doe in English

Examples of vehicle voice commands

You can operate vehicle settings and vehicle functions using the MBUX voice assistant. The following list offers just a small selection of the possible vehicle voice commands.

- i If no seat is mentioned for commands, the action is carried out automatically for the seat from which the command was spoken or for the function which is closest to that seat.
 - Switch the seat heating to level 2.
 - My feet are cold.
 - Start the Refresh programme.

- Switch the relaxation function on.
- I would like to set the ambient light to blue
- Switch on the reading lamp.
- Open all the windows.
- Tell me my next service appointment
- How warm is it outside?
- Show me the charging options
- Select the Home charging programme.
- Set the charging limit to 80%.
- To what percentage will the battery be charged?
- Set my weekend departure time for 10 a.m..
- With how many kilowatts will the battery be charged?
- How much longer do I have to charge?

Information about the vehicle can also be requested:

- Information about individual items of the vehicle equipment
 - Hey Mercedes, which relaxation programmes do you have?

- Hey Mercedes, do I have Blind Spot Assist?
- Hey Mercedes, where is the warning triangle?
- Information about functioning of the systems and components installed in the vehicle
 - Hey Mercedes, what is DISTRONIC?
 - Hey Mercedes, what do I need ESP for?
 - Hey Mercedes, what is MBUX?
- Information about operating the systems and components installed in the vehicle
 - Hey Mercedes, how do I connect my smartphone?
 - Hey Mercedes, how can I turn on the main beam headlamps?
 - Hey Mercedes, how do I stop the ionisation function?

Examples of online functions

Depending on the country, language and vehicle equipment, additional functions are available when online voice control is active. The system

accesses external information and can, as a result, answer general knowledge questions and make calculations, for example.

- Is the sun shining in Manchester?
- Is it raining at my destination?
- What are the skiing conditions on the Zugspitze?
- What's the time in Sydney now?
- In which country do you pay with dollars?
- How many Swiss francs make 25 euros?
- How long now until the holidays?
- What day is it tomorrow?
- What is 20 % of 29?
- What does my horoscope say?
- What is the price of Mercedes-Benz Group shares?
- Let's play Geo Quiz.
- I'm bored.
- Who is the current prime minister?
- What do you know about the Globe Theatre in London?

- Who painted the picture "The Scream"?
- What's the status in the Premier League?
- Create a calendar entry tomorrow at 9 am.
- What's my next task?
- Tell me a joke.
- How many languages do you speak?
- What is your favourite animal?
- Are there any updates?
- Is the light still on in the kitchen?
- Switch off all the devices in my house.
- Please set the temperature in the living room to 24 degrees.
- Next radio station
- Previous radio station
- Next station
- Previous station
- Next track
- Previous track
- Start dashcam recording
- Stop dashcam recording
- Show the map
- 3D map
- 2D map
- Align map to north
- Align map in direction of travel
- Show all routes
- Show traffic
- Navigate to work
- Navigate home
- Repeat driving instruction
- Cancelling route guidance
- Change language to English

Direct command examples

With direct commands, some functions can be operated without first saying the voice command Hey Mercedes. To use direct commands, the function must be activated in the multimedia system (→ page 349).

- Next TV channel
- Previous TV channel

Overview and operation

Overview of the MBUX multimedia system

⚠ WARNING Risk of distraction from information systems and communications equipment

If you operate information systems and communication devices integrated in the vehicle when driving, you could be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- ▶ Only operate this equipment when the traffic situation permits.
- ▶ If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

You must observe the legal requirements for the country in which you are currently driving when operating the multimedia system.

! **NOTE** Increased surface temperature due to direct sunlight on the central display

The surface of the central display is very dark. If the display is exposed to direct sunlight, the surface can become very hot.

- ▶ If the central display has been exposed to direct sunlight, allow it to cool down before touching it for a long time.

i The functions of your MBUX multimedia system may differ and depend on the following factors:

- Market
- National version
- Technical conditions

Functions, services and service aspects provided by Mercedes-Benz and/or third-party providers may no longer be available when the contractual period expires or due to technical conditions. There is therefore no entitlement to the continuous provision of functions and services.

The described functions may be modified, optimised and adapted after the time of going to press.

Mercedes-Benz therefore reserves the right to introduce changes in the following areas:

- Features
- Services
- Service aspects

For these reasons, descriptions and depictions relating to the MBUX multimedia system may, in some cases, differ for your vehicle.

- 1 Touch Control and control panel for the MBUX multimedia system
MBUX stands for Mercedes-Benz User Experience.
 - Operating Touch Control (→ page 359)
- 2 Media display with touch functionality
 - Home screen overview (→ page 359)
 - Operating the touchscreen (→ page 360)

- 3 Controller
 - Press and hold: switches the MBUX multimedia system or media display on or off
 - Press briefly: switches the mute function on/off
 - Turn: adjusts the volume
- i Alternatively, the MBUX Voice Assistant allows voice dialogue. Operation with natural speech starts after the wake-up call "Hey Mercedes" (→ page 348). You can start a voice navigation, for example, with the input of a three-word address from what3words.
- i If the vehicle is fitted with the MBUX Interior Assistant, selected functions of the multimedia system can be operated contact-free. In addition, the reading light or search light can be switched on or off contact-free.

Numerous application, online services, services and apps are available for you. These can be called up via the home screen.

You can conveniently call up your favourites using the  button on the steering wheel. Quick-

access in the home screen and in the applications serve to select functions more quickly.

If you use the learning function of the multimedia system, you will receive suggestions during operation of the most probable navigation destinations, media sources, radio stations and contacts. The configuration of the suggestions is completed in the system settings. You can compile your user profile from various vehicle settings and settings of the multimedia system. Some functions and services are protected by a PIN. You can teach in biometric procedures to identify yourself with these instead of the four-digit Mercedes me PIN.

The Notifications Centre collects incoming notifications, e.g. about an available software update. Depending on the type of notification it offers various actions. The call is made via the Control Centre.

With the global search, you can search on the home screen via categories, e.g. in the navigation, and on the Internet.

Anti-theft protection

This device is equipped with technical provisions to protect it against theft. More detailed informa-

tion about anti-theft protection can be obtained at a qualified specialist workshop.

Home screen overview

- ① On the home screen: displays the first three applications
In other displays: calls up the home screen

- ② Calls up user profile settings and switches user
③ Uses the global search
④ Calls up the Control Centre: pull the bar down
⑤ Calls up favourites
⑥ Displays in the status line
⑦ Calls up applications
⑧ Quick-access to application
⑨ Index points for selected display area
⑩ Calls up the air conditioning menu

The following functions are called up in the Control Centre:

- Notifications Centre
- Favourites
- Vehicle quick-access

In the image, the applications are arranged as a carousel. Pressing and holding on  arranges the applications in a grid. This view is also used by a smartphone, for example.

Touch Control

Operating Touch Control (MBUX multimedia system)

- ①  Shows the home screen
② Touch Control
    Swipe in the direction of the arrow (navigate)
 Press (confirm)
③  Returns to the previous display
④  Makes or accepts a call
⑤  Rejects or ends a call
⑥ To increase volume: swipe upwards

To reduce volume: swipe down

 To switch off the sound: press

 Calls up favourites

 Starts the MBUX Voice Assistant

 To operate Touch Control  in the most effective way, use the tip of your thumb if possible.

You can navigate through menus and lists via the touch-sensitive surface of Touch Control  using a **single-finger swipe**, for example:

-  **To enter a character:** select a character using the keyboard and press on Touch Control .
-  **To select a menu option:** scroll in a list and press Touch Control .
-  **To move the digital map:** swipe in any direction.

Setting the sensitivity for Touch Control

Multimedia system:

-   Settings  System
-  Control elements
-  Touch Control sensitivity

 Select **Fast**, **Medium** or **Slow**.

Setting acoustic operational feedback for all control elements

Multimedia system:

-   Settings  System
-  Control elements  Acoustic feedback

The function is supported by the selection in a list.

-  Set **Off**, **Unleaded** or **Loud**.
If the function is activated you will hear a clicking sound when selecting control elements or when scrolling in a list. When the beginning or end of the list is reached you will hear another clicking sound.

Touchscreen

Operating the touchscreen

Tapping

-  **To select a menu item or entry:** tap on a symbol or an entry.
-  **To increase the map scale:** tap twice quickly with one finger.
-  **To reduce the map scale:** tap with two fingers.
-  **To enter characters with the keypad:** tap on a button.

Single-finger swipe

-  **To navigate in menus:** swipe up, down, left or right.
-  **To move the digital map:** swipe in any direction.
-  **To use handwriting to enter characters:** write the character with one finger on the touchscreen.

Two-finger swipe

- ▶ **To zoom in and out of the map:** move two fingers together or apart.
- ▶ **To enlarge or reduce the size of a section of a website:** move two fingers together or apart.
- ▶ **To turn the map:** turn anti-clockwise or clockwise using two fingers.

Three-finger swipe

- ▶ **To call up the home screen:** swipe up with three fingers in an application.

Touching, holding and moving

- ▶ **To move the map:** touch the touchscreen and move your finger in any direction.
- ▶ **To set the volume on a scale:** touch the touchscreen and move the finger to the left or right.

Touching and holding

- ▶ **To save the destination in the map:** touch the touchscreen and hold until a message is shown.

- ▶ **To call up a global menu in the applications:** touch the touchscreen and hold until the **Options** menu appears.

Overview of the lower control panel in the centre console

- ① Turn: adjusts the volume
Press: switches sound on or off

MBUX Interior Assistant

Notes on lasers and laser classification

- ⚠ **WARNING** Risk of injury from the camera's laser radiation

This product uses a classification 1 laser system. If the housing is opened or damaged, laser radiation may damage your retina.

- ▶ Do not open the housing.
- ▶ Always have maintenance work and repairs carried out by a qualified specialist workshop.

This device is a class 1 laser product in accordance with IEC 60825-1:2014 and DIN EN 60825-1:2014.

- ⚠ **WARNING** Risk of distraction from information systems and communications equipment

If you operate information systems and communication devices integrated in the vehicle when driving, you could be distracted from the

traffic situation. This could also cause you to lose control of the vehicle.

- ▶ Only operate this equipment when the traffic situation permits.
- ▶ If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

You must observe the legal requirements for the country in which you are currently driving when operating the multimedia system.

■ Overview of the MBUX Interior Assistant

If the vehicle is fitted with the MBUX Interior Assistant, selected functions of the multimedia system can be operated contact-free. In addition, the reading light or search light can be switched on or off contact-free.

The MBUX Interior Assistant can differentiate between driver and front passenger interactions.

The MBUX Interior Assistant recognises specific hand movements and a pose.

Example of camera installation location

Camera ❶ is located in the overhead control panel.

System limits, display messages and notes for rectification

The system may be impaired or may not function in the following situations:

- The camera in the overhead control panel may heat up due to operating conditions. As a result the camera may switch off temporarily,

particularly during longer periods of operation and at high outside temperatures.

Do not touch or cover the camera and wait until the camera has cooled down and is available again.

- The camera is covered, dirty, misted up or scratched.

Wait until the camera has cooled down before cleaning the camera lens.

Clean the outside of the camera lens with a dry or damp cotton cloth. Do not use microfibre cloths. Do **not** remove the cover when cleaning.

- Recognition can be impaired by reflective clothing, an adverse colour of clothing or by accessories, for example.
- Clothing being worn (hat, shawl, scarf) may be limiting the detection range of the camera. Keep the camera's field of vision clear.
- The camera is not operational. Consult a Mercedes-Benz service centre.

Supported interactions

Interaction area	Interaction	Description
In front of the media display or above the touch-pad	Proximity to the control element	The MBUX Interior Assistant recognises a hand approaching a control element. Depending on the active application, the display will be adjusted in the media display. Some functions differentiate between driver and front passenger. No specific hand position is required.
Above the centre console	Defined pose	A favourite is called up with a defined pose.
Below the inside rearview mirror	Brief up and down movements	With brief up and down movements below the inside rearview mirror the reading light for the driver or the front passenger is switched on and off.
Above the front passenger seat	Stretching out a hand above the front passenger seat	By stretching out a hand above the front passenger seat the search light is switched on. If you withdraw a hand from this area, the search light is switched off again.

You can watch an animation on this topic via the following link:

■ Operating functions by bringing your hand closer to the multimedia system

Requirements:

- One of the following applications appears in the media display:
 - Seat settings with displays for the driver and front passenger seat, e.g. [Seat](#)

- Home screen
- Radio menu or media menu
- Map in the navigation
- Active Parking Assist

Seat adjustments by the driver or front passenger

In the seat settings menu, the MBUX Interior Assistant detects proximity to various control elements of the multimedia system. In addition, the MBUX Interior Assistant detects from which seat the action emanates.

- ▶ Either switch the function on and off directly or make further settings (depending on function).

Highlighting an application on the home screen

The MBUX Interior Assistant detects in which area your hand is in front of the touchscreen. The display of objects shown is adjusted to improve orientation.

- ▶ Move your hand towards the touchscreen. The symbol for the application is enlarged. The quick-access applications will be highlighted.

- ▶ Continue operation and select a quick-access application, for example.

- ◉ Further information about the home screen (→ page 359).

Activating cover change in the radio menu and media menu

The MBUX Interior Assistant reduces the number of operating steps.

- ▶ Continue operation and select a cover.

- ◉ More information on the radio menu (→ page 484) and the media menu (→ page 479).

Showing the navigation menu on the map

The MBUX Interior Assistant shows the navigation menu.

- ▶ Continue operation and select a symbol.

- ◉ Further information on the navigation menu (→ page 390).

Showing operating symbols in the Active Parking Assist camera image (only from driver's seat)

The MBUX Interior Assistant facilitates quick-access for the driver to various camera views.

- ▶ When Active Parking Assist is shown, move your hand towards the touchscreen. The camera operation symbols are displayed.

- ▶ Continue operation and display the desired front, rear, left and right camera views.

- ◉ Further information on the Active Parking Assist function (→ page 318).

Calling up favourites with the V pose

Requirements:

- There is at least one favourite.
- The favourite has been connected with the MBUX Interior Assistant (→ page 370).
- The area for recognition of the favourite's pose (V pose) is above the centre console at the height of the climate control vents and the media display. Your hand should be at least 10 cm from the media display.
- The V pose is held for a brief time.

Calling up favourites

The driver and front passenger can connect two different favourites with the V pose.

 If a favourite has not yet been saved and connected with the MBUX Interior Assistant, the multimedia system will assist you.

- ▶ Position a hand above the centre console in the direction of the media display. The back of your hand is facing upwards. In doing so the index and middle finger are spread to form a V with the other fingers bent inwards. Briefly hold the V pose.
The favourite is called up.

■ Contactless switching on or off of the reading light for driver and front passenger

Requirements:

- The function is available when it is dark.
- The hand movement takes place in the interaction area below the inside rearview mirror.

Briefly moving a hand up and down under the inside rearview mirror switches the reading light specifically for the driver or front passenger on or off.

- ▶ Move your hand up and down under the inside rearview mirror.
The reading light is switched on or off.

■ Switching the search light for the driver on or off with a hand movement

Requirements:

- The function is available when it is dark.
- The hand movement takes place in the interaction area above the front passenger seat.
- The seat belt on the front passenger seat must **not** be inserted in the seat belt buckle.

Stretching out a hand over the front passenger seat switches a search light on for the driver when it is dark. Pulling the hand back switches the search light off again.

- ▶ **To switch on:** reach across the front passenger seat with a hand.
The search light is switched on for the driver.
- ▶ **To switch off:** take a hand back away from the front passenger seat.
The search light is switched off again.

■ Selecting settings for the MBUX Interior Assistant

Multimedia system:

- ➔  ➔ Settings ➔ System
- ➔ Interior assistant

- ▶ **To switch on full functionality of the MBUX Interior Assistant:** select **On**.
The option is activated ●.
- ▶ **To activate additional functions for reading and search lights:** select **Including search and reading light**.
When the option is switched on, the display button is activated.

The functions for the reading and search lights are activated in addition to the proximity functions.
- ▶ **To switch off the MBUX Interior Assistant:** select **Off**.
The option is activated ●.

User

Notes on user profiles

⚠ WARNING Risk of becoming trapped during adjustment of the driver's seat after calling up a driver profile

Selecting a user profile may trigger an adjustment of the driver's seat to the position saved under the user profile. You or other vehicle occupants could be injured in the process.

▶ Make sure that when the position of driver's seat is being adjusted using the multimedia system, no people or body parts are in the seat's range of movement.

If there is a risk of someone becoming trapped, immediately stop the adjustment process by:

▶ a) Pressing the warning message on the central display.

or

▶ b) Pressing a position button of the memory function or a seat adjustment switch in the driver's door.
The adjustment process is stopped.

The driver's seat is equipped with an anti-entrapment feature.

If the driver's door is open, the driver's seat will **not** be set after calling up the driver's profile.

Overview of user profiles

Requirements for use

- You have a Mercedes me user account.
 - You have a Mercedes me PIN.
 - You have agreed to the terms of use.
 - The vehicle is linked to a Mercedes me user account.
- ⓘ If one of the pre-requisites listed is missing or if no user profile has been selected, the data described in the following section will be saved in the vehicle as the standard setting. Standard settings can be changed by all vehicle users.

User profiles save personal settings. If the vehicle is used by several people, a person can change their profile settings without changing the settings of other users.

You can individualise a user profile in the vehicle using the set-up assistant or using the settings in your user profile. Some settings, e.g. the Mercedes me PIN and a profile photo are made in the Mercedes me App or in the Mercedes me Portal.

ⓘ If the user profile is downloaded while travelling, user profiles are not set up using the set-up assistant.

User-specific content and applications with personal data are protected by different levels of security (→ page 367).

To access protected content, the Mercedes me PIN and, depending on the vehicle equipment, biometric sensors are used.

ⓘ The security level is set by the multimedia system and calculated from the combination of all sensor inputs. Some security levels cannot be turned off.

i When a user profile is activated, the following personalised comfort systems, for example, can be adjusted or their settings loaded:

- Seat
- Ambient light
- Outside mirrors
- Climate control settings

If the user profile is activated when driving then the driver's seat position will not be adjusted.

User-specific content

Depending on the vehicle equipment you can, as a user, save the following settings, for example:

- Driver's seat, steering wheel and mirror settings
- Climate control
- Ambient light
- Radio (including station list)
- Suggestions and favourites

You can watch an animation on this topic via the following link:

Adding a user

Requirements

- The vehicle is stationary.

Multimedia system:

- ▶ Select **+** Add user.
A QR code is loaded.
- ▶ Scan the displayed QR code with the Mercedes me App or any QR code scanner on a mobile device. If the Mercedes me App is not yet installed on your mobile device, you will be directed to the store of your mobile device.
- ▶ Follow the steps in the Mercedes me App. The vehicle is connected with your Mercedes me user account. This automatically creates your user profile in the vehicle.
You will be informed when your user profile is available.

When the vehicle is stationary, the set-up assistant starts automatically after user selection.

i When the user has been added, they can be selected (→ page 369).

Selecting user options

Multimedia system:

Protecting user-specific content and applications

If you add a new user, access protection is already activated for the user profile. The Mercedes me PIN and, depending on the vehicle equipment, biometric sensors are available for access. Biometric sensors in the vehicle must be taught in. The authentication process then takes all taught-in and available sensors into account.

The following user-specific content and applications are protected, for example:

- User selection and user profile settings
- Biometric sensors
The teaching-in of biometric sensors

For teaching in and editing biometric recognition see the following section.

- Suggestions

The data and determination of the most probable navigation destinations, media sources, radio stations, contacts and messages.

- ENERGIZING COACH

The recorded health data and its evaluation.

- In-Car Office

The calendar, the tasks and the e-mails.

- Parking service

The payment transactions.

- Mercedes me Store

The purchase of services.

- System activations of paid vehicle functions

In the following cases you will be prompted for authentication or re-authentication using a sensor or the Mercedes me PIN:

- When selecting a protected user profile
- When calling up a function requiring special protection

- If biometric sensors provide insufficient or contradictory information
- If the multimedia system no longer trusts a sensor
- If the seat belt buckle and the door are opened at the same seat and a function requiring special protection is called up
- When the vehicle is locked from outside

▶ Select **Protect content**.

▶ Switch **Access protection** on or off.

ⓘ When access protection is switched off, your user profile can be viewed from any seat and changes can be made.

ⓘ Access protection is switched on or off on a vehicle-specific basis.

ⓘ Please note that authentication is necessary for several functions such as In-Car Office and cannot therefore be completely switched off.

Setting up and editing biometric recognition

The biometric data models are saved in the sensors in the vehicle. If recognition has been set up,

this sensor serves as a contributory factor for authentication on the multimedia system.

▶ Select **Protect content**.

▶ Select **Voice recognition**.

ⓘ If necessary, authenticate yourself on the multimedia system.

Setting up voice recognition

▶ Speak the sentence shown on the media display and follow the voice assistant's instructions.

If voice recognition was successful, a message appears on the media display. You can unlock your user profile.

ⓘ Avoid background or disturbing noises during voice recognition.

Deleting biometric data

▶ Tap on  behind **Voice recognition**.

▶ Select **Yes**.

Calling up the set-up assistant

▶ Select **Profile**.

- ▶ Select **Set-up assistant**.
- ▶ Follow the directions from the set-up assistant.

Changing a user name or profile photo

- ▶ Select **Profile**.
 - ▶ Select **Change user name**.
- or
- ▶ Select **Profile picture**.
 - ▶ Enter the user name or select a user image.
 - ▶ Select **Finished**.

- ⓘ You can store your photo in the Mercedes me user account using the app or in the portal. The photo will then be shown in the vehicle. In the vehicle itself, you can select other sample images instead of the photo.

Deleting a user profile

- ▶ Select **Profile**.
- ▶ Select **Remove**.
- ▶ Select **Remove user profile**.

- ⓘ Your Mercedes me user account and your personal data will remain within the Mercedes me ecosystem.

Resetting the user profile to factory settings

- ▶ Select **Profile**.
- ▶ Select **Reset**.
- ▶ Select **Yes**.

- ⓘ This resets the contents of the user profile to factory settings, but not the vehicle.

You can watch an animation on this topic via the following link:

Selecting a user

Multimedia system:

- ⓘ When you call up your driver profile, the driver's seat and the steering wheel can be set.

You can cancel the setting process with the following actions:

- Press one of the seat operating buttons in the driver's door.
- ▶ Select **Select user**.

- ▶ Select a user.
- ▶ When requested to do so, authenticate with the Mercedes me PIN or a taught-in biometric characteristic. The user profile is loaded and activated.

- ⓘ If you select **Continue without selecting user**, no specific settings for the user profile are loaded.

Synchronising user profiles

Requirements

- You have a Mercedes me user account.
- The vehicle is connected with your Mercedes me user account.

Multimedia system:

- ▶ **Synchronisation**
- ▶ **Synchronise automatically**.

When the vehicle is switched on or off, the data stored in the vehicle is automatically synchronised with the Mercedes me user accounts. This synchronization is done for all user profiles and is not profile-specific.

or

▶ Select **Synchronise now**.
After selecting this option, the data stored in the vehicle is synchronised with the Mercedes me user accounts.

ⓘ Not all user profile functions are available during synchronization.

ⓘ If the personalisation service in the vehicle is deactivated, only the following user profile master data is synchronised:

- Profile name
- Profile image
- Mercedes me PIN

Favourites

Overview of favourites

Favourites offer you quick access to frequently used applications. 100 favourites are available in total.

You can select favourites from categories or you add favourites directly from an application.

Calling up favourites

Multimedia system:

▶ Alternatively, in the home screen pull down bar in the centre of the status line (→ page 359).

▶ Select  in the Control Center.

Adding favourites

Multimedia system:

Selecting favourites from categories

▶ Select .

▶ Select  **Create new favourite**.

▶ Select the category.

▶ Select a favourite.

The favourite is stored at the next available position.

▶ **All positions in the favourites are taken:** confirm the message shown.
A list shows all the favourites.

▶ Select a favourite to be overwritten.

Adding a favourite from an application

You can, for example, save a contact (example), or add an ENERGIZING COMFORT programme.

▶ **To save a contact as a global favourite:** select a contact (→ page 441).

▶ Press on a telephone number until a menu is shown.

▶ Select **Save as favourite**.

The contact is added as a favourite.

Linking favourites with the MBUX Interior Assistant V pose

ⓘ If a favourite is linked to the V pose, you can call it up (→ page 364).

▶ Select .

▶ Select **Driver** or **Passenger**.

▶ Select the category.

▶ Select a favourite.

If the favourite is linked with the V pose, a notification appears.

ⓘ The linked favourite pose can be activated or deactivated for the driver or front passenger.

Renaming favourites

Multimedia system:

- ▶ Press on a favourite until a menu is shown.
- ▶ Select **Rename**.
- ▶ Enter the name.
- ▶ Save the names.

Moving favourites

Multimedia system:

- ▶ Press on a favourite until a menu is shown.
- ▶ Select **Move**.
- ▶ Move the favourite to the new position.
- ▶ Tap on .

Deleting favourites

Multimedia system:

- ▶ Press on a favourite until a menu is shown.
- ▶ Select **Delete**.
- ▶ Select **Yes**.

Resetting favourites

- ▶ In the menu, select **Reset all favourites**.
- ▶ Select **Yes**.

Notifications Centre

Overview of the Notifications Centre

The following communications are collected in the Notifications Centre:

- Communications which are generated by the vehicle or from the multimedia system.
- Communications which are received through the use of services.

The following notification types are available for you:

- Navigable destinations and routes
- Messages (text messages)
- Calendar entries and reminders, e.g. from In-Car Office

This function is not available in all countries.

- System information, e.g. **Important software update available. Confirm to start the update.**
- Other notifications, e.g. from additional online services that can be subscribed to or emergency reports (e.g. tornado)

The Notifications Centre is in the Control Centre. Depending on the style set, newly received notifications are shown using a coloured dot.

Notifications are normally briefly shown as they are received. If you take no action, these are stored for future access in the Notifications Centre.

The notifications are sorted chronologically. The most recent notifications are at the top.

Example of a message

- ① Calls up the Notifications Centre
- ② Time message received
- ③ Calls up the settings
- ④ Display for available actions
- ⑤ Description of the notification and the issuing service
- ⑥ Symbol for notifications
- ⑦ Date of the received notifications

Depending on the type of notification, up to four different actions are available.

Examples of actions include:

- Reading aloud

- Placing a call
- Replying
- Calling up a web page
- Navigation

Some notifications, e.g. a navigation destination, are stored longer. Therefore, it is not necessary to carry out available actions directly upon receipt of the notifications. A route guidance can be started at a later time.

You can pin a notification so that this is not deleted automatically after a certain time (→ page 372).

Calling up notifications

Opening the Notifications Centre

- ▶ Select  in the Control Center.

Selecting a notification

- ▶ If several messages are available swipe up or down.
- ▶ Select an action.

Closing the Notifications Centre

- ▶ Select .

Selecting actions for a notification

The following options are available:

- Select the action directly after a notification is received and shown.
 - Select the action later after calling up in the Notifications Centre.
- ▶ Up to two actions available: select the action.
 - ▶ More than two actions available: select .
 - ▶ Select the action.
The notification is still available.
 - ▶ Close the actions with .

Editing notifications

- ▶ Call up the Notifications Centre (→ page 372).

Configuring settings

- ▶ Select  **Settings**.
- ▶ Select the service.

- ▶ Switch the options on or off.

The following options are available depending on the service:

- [Allow notifications](#)
- [Display in notification centre](#)
- [Show notifications](#)
- Switching [Acoustic signals](#) on or off
- [External access](#)

The option allows an external service access to specific data, e.g. the current vehicle position. The detailed, approved information is shown with .

If [Allow notifications](#) is switched off, the options cannot be selected with the exception of [External access](#).

Pinning a notification

- ▶ Drag a notification to the right on the touchscreen.
A pin appears.
- ▶ Tap on the pin.
The notification is marked with a pin.

Deleting notifications

- ▶ Drag a notification to the left on the touchscreen.

or

- ▶ Select .
 - ▶ Select [Yes](#).
- All messages are deleted.

Global search

Global search overview

You can call up the global search on the home screen. You can input characters using the keyboard or the handwriting recognition. Alternatively, the MBUX voice assistant allows voice input.

The global search provides search results for the following categories:

- Navigation
- Entertainment
- Phone, In-Car Office
In-Car Office is not available in all countries.
- Digital Owner's Manual

- Internet

The global search enables you to search for towns, roads and tourist attractions in the navigation category, for example.

The global search makes it possible to enter a three-word address (→ page 395).

If the search field is empty, you will first see smart suggestions in the [Suggestions](#) category.

As soon as a letter is entered, you will be shown the best hits in the [All](#) category. You will find further search results in the individual categories. Next to the category is the number of results.

After selecting a category you can select the search results within the category. When you select a search result, a detailed view is opened depending on the category.

Using the global search

Multimedia system:

In the [Suggestions](#) category up to six smart suggestions are displayed, even if no search entry has been entered yet.

▶ Enter the search term into the search field. As soon as a character is entered the **All** category is marked. Up to ten search results per category are displayed there.

In the other categories suitable search results for the entered search item are displayed.

ⓘ Alternatively, the MBUX Voice Assistant allows voice input using  or you switch to the handwriting recognition  (→ page 374).

▶ **To end the search:** select .

▶ **To show search results for a category:** select a category.

▶ **To accept the search result:** select the search result. An action starts, e.g. a radio station is set or a detailed view is displayed, e.g. for a contact.

Entering characters

Using the character input function

Requirements:

- **For the handwriting recognition read-aloud function:** the MBUX multimedia system is equipped with the MBUX voice assistant.
- The read-aloud function is available for the selected system language.
- The handwriting recognition read-aloud function is activated.

Enter the characters on the Touch Control or on the touchscreen. Character input can be started with a control element and resumed with another.

▶ When the keypad is shown, enter the characters by swiping and pressing on the Touch Control or by tapping on the touchscreen.

or

▶ If handwriting recognition has been selected, write the characters on the touchscreen.

Examples for character input include the global search, entering a navigation destination or the renaming of a favourite, for example.

The touchscreen supports character input with the following functions:

- Handwriting recognition offers character suggestions.
- If the read aloud function is activated for handwriting recognition then the entered characters are read aloud.

Entering characters on the touchscreen

Requirements:

- If you wish to have the character input read aloud: the read aloud function of the handwriting recognition is switched on (→ page 376).
- An online connection is required for some functions.

Character input with the keypad (destination entry)

- ➊ Input line with current entry
- ➋ Deletes an entry
- ➌ Displays and selects additional destination searches
- ➍ Adopts the search result in the input line and continues the search
- ➎ Search result

- ➏ Deletes the last character entered
- ➐ Hides the keypad
- ➑ Switches to handwriting recognition
- ➒ Sets the written language
- ➓ Switches to digits and special characters
- ➔ Switches to upper-case or lower-case letters

If available, selecting the  symbol starts the MBUX Voice Assistant.

- ▶ Example: call up the navigation and enter a destination address (→ page 25).
- ▶ Briefly press on a character.
The character is entered in input line ➊.
- ▶ Resume character input.

- ⓘ The available editing functions depend on the editing task, the language set and the character level.

Entering alternative characters

- ▶ Press and hold on a character.
- ▶ Select the character.

Ending character input

- ▶ Hide keypad ➐.

Example: entering characters with handwriting recognition

- ➊ Input line
- ➋ Shows suggestions during input
- ➌ Accepts search result
- ➍ Search result

- 5 Displays additional suggestions
- 6 Deletes the last characters entered
Pressing and holding deletes the entry
- 7 Enters a space
- 8 Switches to keypad entry
- 9 Accepts an entry
- 10 Shows suggestions during input
- 11 Writing area

If available, the  symbol allows you to change to voice input.

- ▶ When the keyboard is displayed, select .
- ▶ Write the character with one finger on the touchscreen. The letters can be written next to each other or above each other. The character is entered in input line 1. Suggestions are shown in 10.
- ▶ Select one of the suggestions.
- ▶ If available, display additional suggestions with  or .
- ▶ **To end character entry:** press briefly on .

Setting the keyboard and handwriting recognition for character entry

Requirements:

- The read-aloud function is available for the selected system language.

Multimedia system:

- ▶  ▶ Settings ▶ System
- ▶ ▶ Keyboards and handwriting

Setting the keyboard language

- ▶ Select **Keyboard languages**.
- ▶ Select one or more keyboard languages.

Setting the writing speed

- ▶ Select **Handwriting recognition**.
- ▶ Select an option, e.g. **Medium**.

Activating the read-aloud function

- ▶ Select **Handwriting recognition**.
- ▶ Activate  **Read out**.
The letter that you write on the touchscreen is read aloud.

Activating handwriting recognition on the keyboard

- ▶ Select **Handwriting recognition**.
- ▶ Activate  **Handwriting recognition**.
You can write characters directly on the keyboard.

Deleting the user dictionary

The user dictionary learns from your inputs and offers suggestions during character input. You can reset the user dictionary.

- ▶ Select **Reset my dictionary**.
- ▶ Select **Yes**.

System settings

Display

Configuring display settings

Multimedia system:

- ▶  ▶ Settings ▶ System ▶ Display

Adjusting the brightness

- ▶ Select **Display brightness**.

- ▶ Vehicles with a driver display and media display: adjust the display brightness of the driver display or media display.

Time and date

Setting the time zone

Multimedia system:

- ▶  ▶ Settings ▶ System ▶ Time and date

- ▶ Select **Time zone**.

The list of countries is displayed.

- ▶  If there are several time zones available in a country, these will be shown after the country is selected.

- ▶ Select a country and, if required, a time zone. The time zone set is displayed after **Time zone**.

or

- ▶ Select the **Automatic time zone** entry from the country list. The time zone will be set automatically according to the vehicle location.

- ▶  The **Automatic time zone** option is available for vehicles with satellite reception.

Setting the time and date format

Multimedia system:

- ▶  ▶ Settings ▶ System ▶ Time and date ▶ Set format

- ▶ Select a time and date format.

Setting the time and date manually

Requirements:

- The vehicle does not have satellite reception.

Multimedia system:

- ▶  ▶ Settings ▶ System ▶ Time and date

Setting the time

- ▶ Select **Set time**.
- ▶ Set a time.
- ▶ Press **OK** to confirm.

Setting the date

- ▶ Select **Set date**.

- ▶ Select a date.
- ▶ Press **OK** to confirm.

- ▶  On vehicles with satellite reception, the time and date settings are determined automatically based on the vehicle location and cannot be set manually.

Adjusting the time

- ▶ Select **Adjust time**.
- ▶ Set a value.
- ▶ Press **OK** to confirm.

- ▶  The function is only available in vehicles with satellite reception.

Vehicle position

Switching transmission of the vehicle position on or off

Requirements:

- A Mercedes me user account is available.
- At least one service is activated in the Mercedes me user account which has access to the transmitted position data.

-  The function is country-dependent. For more information, consult a Mercedes-Benz service centre.

Multimedia system:

  **» Settings** **» System**
» Data protection

-  Activate or deactivate the **Transmit veh. position** function.

-  Alternatively, you can also switch the function on or off in the status line via .

Setting permissions

Multimedia system:

  **» Settings** **» System**
» Data protection **» Permissions**

In the **Permissions** menu, you can set access authorisations for various data points (such as microphone, camera) used in an application. You can change permissions that have already been granted here. You can set permissions either for individual data points or for certain applications or websites.

-  Select **Requests** or **Apps/websites**.
-  Make the required settings for the permissions.

Bluetooth®

Information about Bluetooth®

Bluetooth® technology is a standard for short-range wireless data transfer up to approximately 10 m.

You can use Bluetooth® to connect your mobile phone to the multimedia system and use the following functions, for example:

- Hands-free system with access to the following options:
 - Contacts (→ page 441)
 - Call lists (→ page 442)
 - Text messages (→ page 443)
- Internet connection (→ page 468)

Bluetooth® is a registered trademark of Bluetooth Special Interest Group (SIG) Inc.

-  Internet connection via Bluetooth® is not available in all countries.

Activating/deactivating Bluetooth®

Multimedia system:

  **» Settings** **» System**
» Internet and Bluetooth

-  Activate or deactivate **Bluetooth**.

Near Field Communication (NFC)

Information on Near Field Communication (NFC)

NFC enables short-range wireless data transfer or connection of a mobile phone with the multimedia system.

Further information can be found at: <https://www.mercedes-benz-mobile.com/>

Switching near-field communication on or off

Multimedia system:

  **» Settings** **» System**
» Internet and Bluetooth

-  Activate or deactivate **NFC**.

Wi-Fi

■ Wi-Fi connection overview

You can use Wi-Fi to set up a connection to the Internet or to external network devices.

- ⓘ The availability of the function is dependent on the country.

Generally, two types of Wi-Fi connection are available:

- **Using the multimedia system as a Wi-Fi hotspot** (→ page 379)

The vehicle's multimedia system serves as a Wi-Fi hotspot for mobile communication devices, such as smartphones or tablet PCs, for example.

- **Using a mobile communication device as a Wi-Fi hotspot (tethering)** (→ page 470)

An external Wi-Fi hotspot is accessed for the Internet connection of the vehicle's multimedia system.

■ Switching Wi-Fi on or off

Multimedia system:

→  → Settings → System
 → Internet and Bluetooth

- ▶ Select **Wi-Fi**.

The controller is to the right: Wi-Fi is switched on.

When Wi-Fi is switched on, you can connect the multimedia system with external hotspots or make it available as a hotspot for external devices.

When Wi-Fi is switched off, it is not possible to establish a hotspot connection.

- ⓘ The availability of the function is dependent on the country.

■ Using the multimedia system as a WLAN hotspot

Requirements

- The device to be connected supports at least one of the types of connection described.

The connection types shown depend on the device to be connected. The function must be supported by the multimedia system and by

the device to be connected. The type of connection must be selected on the multimedia system and on the device to be connected.

- ⓘ The data volume of the vehicle or an already connected tethering device is used for the data connection.
 Vehicle data volumes: depending on the vehicle equipment, you can purchase a data package directly from a mobile phone network provider via the Mercedes me Store. To be able to use the data package, you conclude a separate contract with a mobile phone network provider via the Mercedes me Store, which can be terminated at any time and for which there are no costs. This contract is a prerequisite for using the services from the previously purchased package. The availability of this option is dependent on the country. If the data package option is not available or can be upgraded, you can purchase data volume directly from the mobile phone network provider for a fee.

- ❗ Some functions may first need to be activated on the device being connected. More detailed information can be found in the manufacturer's operating instructions.
- ❗ The use of the vehicle data tariff by external devices is not available in all countries.

Multimedia system:

➔  ➔ Settings ➔ System
 ➔ Internet and Bluetooth

- ▶ Select **MBUX hotspot**.
- ▶ Select one of the following connection options.

Connecting using a QR code

Requirement: an app for scanning the QR code is installed on the device being connected.

Alternatively: the device being connected has an integrated QR code scanner (see the manufacturer's operating instructions).

- ▶ Scan the QR code shown.
The WLAN connection is established.

Connecting using NFC

- ▶ Activate NFC on the device to be connected.
- ▶ When the NFC symbol is displayed in the **MBUX hotspot** menu, hold the device to be connected to the NFC interface.
- ▶ Follow the instructions on the device.
The WLAN connection is established.

Connecting using a security key

- ▶ Select the vehicle from the device to be connected. The vehicle is displayed with the **MBUX XXXXX** network name.
- ▶ Enter the security key which is shown in the media display on the device to be connected.
- ▶ Confirm the entry.

Generating a new security key

- ▶ Select the **Generate new security key** option in the **MBUX hotspot** menu.
- ▶ Confirm the prompt with **Yes**.
A new security key is generated.

A connection will be established with the newly created security key.

- ❗ When a new security key is generated, all existing WLAN connections are then disconnected. If the WLAN connections are re-established, the new security key must be entered.

System language

Notes on the system language

This function allows you to determine the language for the menu displays and the navigation announcements. The selected language affects the characters available for entry. The navigation announcements are not available in all languages. If a language is not available, the navigation announcements will be in English.

Setting the language

Multimedia system:

➔  ➔ Settings ➔ System
 ➔ Language

Setting the system language

A list of the available system languages is shown.

- ▶ Select a language.
The system language is switched to the selected language.

Setting the distance unit

Multimedia system:

 ▶▶ Settings ▶▶ System ▶▶ Display

- ▶  This function is not available in all countries.
- ▶ Select a unit for the distance.
- ▶ Activate **Additional speedometer** for an additional display in the driver's display.

Activating/deactivating system PIN protection

Multimedia system:

 ▶▶ Settings ▶▶ System
▶▶ Data protection ▶▶ PIN protection

Setting the system PIN

- ▶ Select **Set PIN**.
- ▶ Enter a four-digit system PIN.

- ▶ Enter the four-digit system PIN again.
If both system PINs match, then the system PIN protection is active.

Changing the system PIN

- ▶ Select **Change settings**.
- ▶ Enter the current system PIN.
- ▶ Select **Change PIN**.
- ▶ Set a new system PIN.

Activating system PIN protection for software updates

- ▶ Select **Protect software updates**.
- ▶ Activate or deactivate the function.

Configuring suggestions

Multimedia system:

 ▶▶ Settings ▶▶ System
▶▶ Suggestions

- ▶ Select .

- ▶ Switch the options on or off individually.
If an option is switched on and sufficient data has been gathered, personalised suggestions based on your user behaviour will be offered to you. These are, for example, navigation destinations visited, phone numbers dialled as well as suggestions based on your music preferences.

Navigation

When **Allow destination suggestions** is switched on, the vehicle makes suggestions based on your visited navigation destinations.

If **Commuter route** is switched on, the navigation automatically detects that the vehicle is on a commuter route.

Calls & messages

Suggestions are offered for numbers dialled and messages sent.

Comfort

The vehicle makes suggestions based on the use of your comfort functions, e.g. which massage programme should be started at what time.

Entertainment

Suggestions are offered for the currently played media source. Suggestions are also made for online digital services, e.g. Spotify, TuneIn Radio and streaming services, and for categories, e.g. genre, artist and mood.

Vehicle

The suggestions for vehicle functions are displayed, e.g. for Parking Assist PARKTRONIC.

Online voice services

The suggestions are made available online based on your voice input and are offered on the zero layer.

-  The suggestions offered depend on the equipment.

Deleting collected suggestions

Multimedia system:

-    Settings  System
-  Suggestions
-  Select .

-  Select **Yes**.
The suggestions are reset.

Software update

Information on software updates

Software updates keep your vehicle and the related systems up-to-date and prevent security flaws.

Software updates are available online for vehicle components such as control units, convenience systems, locking and safety systems, driver assistance systems, suspension and drive systems as well as for the MBUX multimedia system. Software updates are available via the communication module or a Wi-Fi connection to an external hotspot.

The navigation maps are also updated via updates from external storage media (e.g. USB flash drive).

Install available software updates regularly. Otherwise the security of your MBUX multimedia system and individual vehicle components cannot be ensured.

-  Software updates can be protected with a system PIN. Further information about the system PIN (→ page 381).

Further information about software updates can be found at <https://me.secure.mercedes-benz.com>.

Carrying out software updates

Requirements

For software updates via the communication module and Wi-Fi:

- Your vehicle is linked to a Mercedes me user account (→ page 460).
- Software updates without Mercedes me user account: the **Allow software updates** option is activated in the **Software update** menu.
- For software updates via the communication module: an Internet connection exists via the communication module (→ page 469).
- For software updates via Wi-Fi: a connection to an external Wi-Fi hotspot exists (→ page 470).

-  Depending on the software update, this is started via the  communication module,  Wi-Fi or an  external storage medium.
-  Online software updates cannot be performed via external Wi-Fi hotspots that are encrypted via TKIP.
-  If the Wi-Fi hotspot requires logging in via the browser, once the connection is successfully established the browser will open in order to start the update. To start the download follow the instructions in the browser.

Multimedia system:

Starting a map update from an external storage medium

-  Connect the storage medium with the vehicle via a media interface.
A message about an available map update appears on the media display.
-  Select the message.

-  Select **Start**.
The map update is started.

Starting the software update via the communication module

If the **Automatic online update** option is active, available software updates are downloaded and installed automatically. Activate the option in order to always keep your vehicle up-to-date and avoid security flaws.

-  Select **Automatic online update**.
The software update is downloaded and installed automatically.

If the option is deactivated, you will be informed of new software updates once. The updates are available for downloading for a limited period of time.

-  Select an update from the list of available updates.
-  Start the update.
The software update is downloaded and installed automatically.

Starting a software update via Wi-Fi

Some software updates require an additional connection to a Wi-Fi hotspot. The connection to an external hotspot can be established when the software update is started.

-  Select an update from the list of available updates.
-  Start the update.
-  Establish the connection to a Wi-Fi hotspot.
The update is downloaded and installed automatically.

For software updates requiring a safe vehicle status: when the last installation step is reached, a message appears on the media display after the vehicle is switched off. Follow the step-by-step instructions on the media display to complete the installation.

There are software updates that can only be installed when the vehicle is safely parked, there are no more people in the vehicle and the vehicle is locked.

Installing software updates

Software updates are installed automatically after they are downloaded. As soon as the software update has been completed, a message appears in the media display. It may be necessary to restart the MBUX multimedia system.

Some software updates require a safe vehicle status for the installation to be completed. They can only be carried out in a safely parked vehicle with the vehicle switched off. If this is necessary, a message appears on the media display after the vehicle is switched off.

▶ Follow the instructions on the media display.

For some software updates, you can set a time for installation. The installation is carried out automatically at the scheduled time. You do not need to be in the vehicle during installation. Note that the planned installation is cancelled as soon as the vehicle door is opened.

If an installation is available where you can set the time, a message appears on the media display after the vehicle is switched off.

▶ Follow the instructions on the media display.

The vehicle cannot be used while these software updates are being installed. Make sure that no persons or animals are in the vehicle. Events stored in the vehicle's control units can be overwritten.

Availability of the driver and media display

During the installation of software updates, it is not possible to use the vehicle, driver display and media display. You may receive the following display message when an installation is running:

i The display message does not appear every time a software update is installed.

In rare cases, an error can occur during the installation. The multimedia system automatically attempts to restore the previous version.

If it is not possible to restore the previous version, the display message shown above appears every time the vehicle is started.

Failure of the driver display:

If the driver display fails or there is a malfunction, you may not recognise limitations in the functions of systems relevant to safety or the speed display, for example. This may impair the operating safety of the vehicle. Park the vehicle safely as soon as possible and notify a qualified specialist workshop.

Further information about software updates can be found at <https://me.secure.mercedes-benz.com>

Failure of the media display:

If the media display fails or the display message shown above is shown continuously, several systems such as the reversing camera, Parking Assist PARKTRONIC or climate control are no longer available. Drive on carefully and consult a specialist workshop as soon as possible.

Resetting the multimedia system (reset function)

⚠ WARNING Risk of accident due to failure of central display functions

While the multimedia system is reset, its functions, such as the reversing camera, are not available.

▶ Only reset the multimedia system when the vehicle is stationary.

Requirements:

- The vehicle is switched on.
- The vehicle is stationary.

Multimedia system:

➔  ➔ Settings ➔ System ➔ Reset

When resetting the system, personal data and settings are deleted, for example:

- Connected devices
- Individual user profiles
- Biometric data

i The data used and saved in the multimedia system by the driver assistance systems is deleted.

▶ Select **Reset**.

A query appears asking if the system should really be reset.

▶ Select **Yes**.

The multimedia system is reset to the factory settings. The multimedia system is restarted after the system reset.

i Due to data protection, as well as the function of individual driving systems and driving safety systems, it is a requirement to carry out a complete system reset before selling the vehicle or transferring it to a third party, or after use as a hire car.

Drive system settings

Functions of the energy flow display

The active components of the drive system are highlighted on the energy flow display. The energy flow between the individual components is shown in colour.

The energy flow is shown in different colours depending on the operating status:

- **White:** strong acceleration (boost effect)
- **Copper:** driving at constant speed or with moderate acceleration
- **Blue:** recuperation (charging the high-voltage battery) or overrun mode

Calling up the energy flow display

Multimedia system:

➔  ➔ Info

▶ Select **Energy flow**.

The energy flow in the vehicle will be displayed.

Fit & Healthy

Setting ENERGIZING seat kinetics

Requirements

i These functions are available only for fully electric seats with a memory function.

Multimedia system:

➔  ➔ Comfort ➔ Seat

▶ Select **Seat kinetics**.

ENERGIZING seat kinetics can support back health by changing the seat position during a journey. This involves repeatedly stressing and relieving the muscles and joints by means of minor movements of the cushion and backrest.

Starting seat kinetics

▶ Select  for the desired seat.
The programme will run for the set duration.

Configuring seat kinetics

- ▶ Select  for the desired seat.
- ▶ Select **Backrest**, **Backrest & seat surface** or **Seat surface**.
- ▶ Select the desired duration for the selected seat.

ENERGIZING COMFORT

Overview of ENERGIZING COMFORT programmes

 Note that the available programmes and the associated functions depend on your vehicle equipment. Depending on your equipment, fewer functions may be available.

Programme overview

- **Refresh:** Can have a refreshing effect with short, cool puffs of air. The seat is ventilated, the vehicle interior is illuminated with cool colours and the programme is completed with appropriate sound.
- **Warmth:** Can increase the comfort level of the vehicle occupants. Seat, surface and steering wheel heater provide soothing warmth. The programme is completed with unobtrusive sound and warm colours.
- **Vitality:** Can counteract diminishing attentiveness in monotonous driving situations. The activating stimulation of the vehicle occupants is carried out with invigorating sound, activating light and a vitalising massage.
- **Pleasure:** Can promote a positive mood in the vehicle occupants as well as mental regeneration. This results from the activation of a massage programme, friendly sound and illumination with suitable colours.
- **Comfort:** Can help relax the vehicle occupants. This is achieved through a relaxing massage, friendly light and calming sound.
- **Forest Glade:** Can have a calming and soothing effect on the vehicle occupants thanks to the acoustics of the forest. The ambience is supported by a suitable animation, colours and sound.
- **Sounds of the Sea:** Can contribute to calming the vehicle occupants. The acoustics of wave sounds and seagulls in combination with other vehicle functions create a relaxing seashore atmosphere.
- **Summer Rain:** Can help relax the vehicle occupants. The relaxing effect of a rain shower can be experienced via acoustics and other vehicle functions inside the vehicle.
- **Power Nap:** The programme consists of three phases.

- Falling asleep phase: here relaxing music is played and the air is purified by ionisation.
 - Sleeping phase: the active functions are deactivated or restricted as much as possible.
 - Waking phase: slightly stimulating music is played and the air is purified by ionisation. Additionally, functions such as fragrancing, seat ventilation and a massage programme are activated.
- **Training:** Can counteract the onset of muscle tension, limbs falling asleep or stress with targeted relaxation or stimulation exercises. The exercises are demonstrated in short videos. The training consists of audio content and a brief animation. The audio content is conceived so that it can also be played back when you are driving. Animations are only shown when the vehicle is stationary. Always observe the traffic conditions if you are training when driving.
 - **Tips:** The system gives auditory tips for possible exercises or measures for improving the

comfort level of the vehicle occupants. By selecting the desired area of the body you can receive targeted tips for the comfort level of this area.

Most programmes that have been started for one seat can also be transferred simultaneously to another seat.

Starting the ENERGIZING COMFORT programme

⚠ WARNING Increased risk of accidents when using the ENERGIZING COMFORT programmes **Tips** and **Training**

The **Tips** and **Training** ENERGIZING COMFORT programmes can distract you when driving.

- ▶ Only carry out exercises if the traffic situation permits.
- ▶ When listening to the tips, make sure you are aware of the traffic around you at all times.

⚠ WARNING Risk of becoming trapped when using the ENERGIZING COMFORT programme **Power Nap**

The following systems may be automatically moved when using the ENERGIZING COMFORT programme **Power Nap**:

- Side windows
- Sliding sunroof
- Roller sunblinds

As a result you or other vehicle occupants may become entrapped.

- ▶ Make sure that there is sufficient space behind the front seats.
- ▶ Make sure that no body parts are in the area of movement.

Requirements

- The vehicle is switched on.

For the start of **Power Nap**:

- Only the power supply is on.
- The doors are closed.

- The vehicle is secured against rolling away.
- The state of charge of the high-voltage battery is sufficient for the use of the auxiliary climate control.

Multimedia system:

➔  ➔ **Comfort**
➔ **ENERGIZING COMFORT**

Starting and stopping a programme

- ▶ Select a programme.
- ▶ Select  for the desired seat.
- ▶ Select  to stop the programme.

 If, during an active programme, a function requirement is no longer met, a corresponding message appears. The active programme is cancelled.

Configuring a programme

- ▶ Select a programme.
- ▶ Select **Settings**.
- ▶ Switch the functions included in the programme on or off.

Setting the duration

- ▶ Select a programme.
- ▶ Select **Settings**.
- ▶ Select the desired duration.

Starting a Power Nap

- ▶ Select **Power Nap**.
- ▶ Select  for the desired seat.

When the vehicle is stationary, the following actions are carried out when Power Nap is started:

- The roller sunblinds are extended.
 - The doors are locked.
 - The windows and sliding sunroof are closed.
 - The parking brake is applied.
- ▶ Select  to stop the programme.

Starting the training programme

- ▶ Select **Training**.
- ▶ Select  a programme.

▶ **To activate fragrancing for training:** select **Air freshener**.

▶ Select  to stop the training programme.

 The animations demonstrating the exercises are faded out when the vehicle is in motion and you only hear the instructions.

Starting tips

- ▶ Select **Tips**.
- ▶ Select  an area of the body.
- ▶ Select  to stop playback of the tip.

ENERGIZING COACH

Function of the ENERGIZING COACH

Requirements

- The **ENERGIZING COACH** service is activated in the Mercedes me portal or the Mercedes me App.
- The Mercedes me ENERGIZING app is installed on the mobile phone to use the service.

With ENERGIZING COACH you can evaluate the driving and driver situation. Depending on the situation, it offers recommendations for the start of an appropriate ENERGIZING COMFORT programme.

The following programs could be suggested:

- **Vitality**

As an activating programme in monotonous driving situations or for long journey times, for example

Information on the vitality program see (→ page 386).

- **Joy**

As a balancing programme in demanding driving situations

Information on the Enjoyment program see (→ page 386).

- **Refresh**

As a refreshing programme when temperatures rise

Information on the Refresh programme; see (→ page 386).

- **Warmth**

As a warming programme when temperatures drop

Information on the Warmth programme; see (→ page 386).

By connecting a Garmin fitness tracker, for example the Garmin vivoactive® 3, additional information can be entered into the evaluation for the recommendation of an ENERGIZING COMFORT programme. The additional information includes the stress level, that is calculated by the fitness tracker. The stress level is based primarily on the pulse rate.

Requirements for the integration of additional information via a Garmin fitness tracker:

- Your fitness tracker is connected with your Garmin account.
- Your Garmin account is connected with your Mercedes me user account.

If you wear your Garmin fitness tracker at night also, the sleep data is included in the evaluation of the ENERGIZING COACH.

Requirement for the integration of the sleep data:

- The Garmin fitness tracker is synchronised with the Garmin account before the beginning of the journey.

■ Calling up the ENERGIZING COACH display

Requirements:

- The fitness tracker is connected with your Garmin account.
- Your Garmin account is connected with your Mercedes me user account in the Mercedes me ENERGIZING app.
- The mobile phone is connected to the multimedia system (→ page 435).
- You are logged in with your Mercedes me profile both in the vehicle and in the Mercedes me ENERGIZING app.

Multimedia system:

→ [Home] >> Apps >> ENERGIZING COACH

Your current pulse as well as an evaluation of your pulse for the last 30 minutes driving time are shown.

A corresponding error message is shown if there is no mobile phone connected or no pulse can be sent to the system for an extended period.

ⓘ Only pulse values which fall into the range from 30 - 140 (possibly also 150) bpm will be shown on the media display. The pulse values have no medical validity but are only informative in nature and are therefore also not required to be accurate.

Navigation and traffic

Switching navigation on

Multimedia system:

→ [Home] >> Navigation

Alternatively, switch on the MBUX voice assistant (→ page 348).

▶ Switch to navigation.
The map appears.

Navigation overview

Digital map

① Navigation module (reduced view)
Route guidance active:

Reduced view of the navigation module shows information relevant to the route, e.g. the next charging stop, the destination and a traffic delay

Tapping opens the navigation module and displays the route overview (→ page 407)

Tapping on the chequered flag ends the current route guidance

- ② Sets map orientation [Compass icon] and map type
- ③ Calls up the telephone menu
- ④ Calls up entertainment applications
- ⑤ Navigation window shows the next manoeuvre (zoomed out view) or the route monitor (zoomed in view)

Route guidance active: route monitor shows, e.g. route sections, upcoming driving manoeuvres with lane recommendations, charging stops, destination, traffic delays, 3D images at motorway exits, online content

Pressing ② several times changes the map orientation in this order:

- 2D and to the north
- 2D and in the direction of travel

- 3D and in the direction of travel
 - Map with complete route
- ① If the map is moved, the map switches between 3D direction of travel and 2D north orientation.

The following map types ② are available:

- Daytime display
 - Night-time display
 - Satellite map
- ① If you notice a problem with the digital map you can report this under <https://mapfeedback.here.com/#/report>.

Destination entry

Notes on destination entry

⚠ WARNING Risk of distraction from operating integrated communication equipment while the vehicle is in motion

If you operate communication equipment integrated in the vehicle when driving, you could be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- ▶ Only operate this equipment when the traffic situation permits.
- ▶ If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

You must observe the legal requirements for the country in which you are currently driving when operating the multimedia system.

Entering a POI or address

Requirements:

- **For the online search:**
 - There is an Internet connection.
 - Mercedes me connect is available.
 - You have set up a user account in the Mercedes me Portal.
 - The vehicle is connected with the user account and you have accepted the terms of use.
 - Further information can be found at: <https://www.mercedes.me>
 - The service is available and has been activated.
- ① If Online Search is not available, the search is performed using the data of the digital map.

Multimedia system:

Example: entering a POI or address

- ① Input line with current entry
- ② Deletes an entry
- ③ Selects previous destinations
- ④ Displays and selects additional destination searches

- ⑤ Adopts the search result in the input line and continues the search
- ⑥ Search result
- ⑦ Deletes the last character entered
- ⑧ Hides the keypad
- ⑨ Switches to handwriting recognition (→ page 374)
- ⑩ Sets the written language
- ⑪ Switches to digits and special characters
- ⑫ Switches to upper-case or lower-case letters

If available, selecting the  symbol starts the MBUX Voice Assistant.

- ▶ Enter a destination. The entries can be made in any order. The search results are displayed in a list.

- ① Online search results for POIs may contain additional information, for example opening times and ratings. The information is provided by an online map service. This online function is not available in all countries.

The following entries can be made, for example in

①:

- Town, street, house number or street, town
- Postcode
- POI name or POI category, e.g. [Restaurants](#)
- Town, POI name
- Contact name
- Geo-coordinates (→ page 395)
- Three-word addresses from what3words (→ page 395)

Entering three-word addresses is possible in the online search.

- ▶ Hide the keyboard with **OK**.
- ▶ Select the destination in the list. The following menu shows the selected destination with the address information and a corresponding map section. The menu enables the route to be calculated.

Selecting a destination suggestion

Requirements:

- The [Allow destination suggestions](#) option is switched on (→ page 381).
- The multimedia system has gathered sufficient data in order to show destination suggestions.

Multimedia system:

- ▶ Select [Suggestions](#).

The route is calculated in the following menu.

- ① If [Suggestions](#) has been selected, a menu is available via . The menu offers settings for the suggestions and memory functions.
- ① Managing destination suggestions (→ page 416).

Selecting previous destinations

Multimedia system:

- ▶ Select [Previous destinations](#).

- ▶ Select the destination.
The following menu enables the route to be calculated.

- ① You can save a destination as a favourite (→ page 416).

Selecting a POI

Requirements:

- **For use of personal POIs:** a USB device is connected with the multimedia system.
- Personal POIs with the GPS Exchange format (.gpx) have been saved in the PersonalPOI folder on the USB device.

Multimedia system:

- ▶ Select [POIs](#).
- ▶ Select one of the displayed quick-access categories, e.g. .
- ▶ Select the POI.
The following menu enables the route to be calculated.

or

- ▶ Select [All categories](#) or [Personal POIs](#) (see requirements).
- ▶ Select the category.
- ▶ Select the POI.
The following menu enables the route to be calculated.

Setting a search filter after selecting a POI category

The preset search position depends on the status of the route guidance:

- If route guidance is not active, [In the vicinity](#) is searched.
 - If route guidance is active, [Along the route](#) is searched.
- ▶ When the search results are displayed, select [Filter](#).
 - ▶ Select the search position, e.g. [In the vicinity](#).
 - ▶ If a route with intermediate destinations already exists and [Near destination](#) has been selected in the search filters, the destination is selected for the search.

or

- ▶ Select the desired travelling time to the point of interest.
- ▶ Select [Search results](#).

Configuring categories for quick access

The categories are displayed:

- As symbols after calling up the destination entry via 

- As a list after calling up [All categories](#)

- ▶ In the POI menu, select [All categories](#).

- ▶ Select  or  for a category. Tapping on  adds the category.

Tapping on  removes the category.

- ▶ Use  to change back.

The new categories are shown after the destination entry is called up the next time.

- ⓘ If all available quick-access positions are full, select the category to be replaced.

Changing the order of quick-access categories

- ▶ In the POI menu, press and hold a category for quick access.

- ▶ Tap on the arrows next to the selected category. The arrows for the other categories are greyed out.

- ▶ Drag the category up or down.

- ▶ Select .

Deleting quick-access categories

- ▶ In the POI menu, press and hold a category for quick access.

- ▶ Select  for the chosen category.

- ▶ Select [Delete](#).

- ▶ Select .

Changing categories for personal POIs

- ▶ Select [Personal POIs](#).

- ▶ Press on a category as long as is necessary until a menu appears.

- ▶ Select [Change name](#) and enter a name.

- ▶ Select [Change icon](#) and select a symbol.

- ▶ Select [Delete](#) and confirm the prompt with [Yes](#).

Selecting a contact for destination entry

Requirements:

- A mobile phone is connected to the multimedia system (→ page 435).
- The contacts from the mobile phone have been downloaded .
- The contact has a navigable address.
- The address data can be located on the digital map.

Multimedia system:

- ▶ Enter a contact in the entry line.

- ▶ Select the address. The following menu enables the route to be calculated.

- ⓘ Alternatively, after calling up the destination entry, you can enter the name of a contact in the search field.

Entering geo-coordinates

Multimedia system:

- ▶ Enter the geo-coordinates as latitude and longitude.

Examples of input formats:

- 47°58'11"N 7°57'25"E (degrees, minutes and seconds)
- 47.969722 7.956944 (decimal degrees)

- ▶ Confirm the entry.
The following menu enables the route to be calculated.

Entering the destination as a three-word address

Requirements:

- An active Internet connection is indicated in the status line on the media display with the  symbol.
- The online search is active.

Multimedia system:

- ▶ Enter the destination as a three-word address from what3words. The entry can be made with spaces between the words instead of dots. The search results are displayed.
- ▶ Select the destination in the list.
The following menu enables the route to be calculated.

The Brandenburg Gate has this language dependent three-word address:

- German: tapfer.gebäude.verliehen
 - English: that.lands.winning
 - French: postaux.bobineur.ombrant
-  Searching for a destination using three-word addresses is not possible in all countries and in all languages.

Alternatively, use the following entry options:

- Entry in the global search (→ page 373)
- Voice navigation (→ page 348)

Example: during a telephone call you are given a 3-word address. After activating the MBUX voice assistant, say one of the following two voice commands:

- **Navigate to tapfer gebäude verliehen**
- **Navigate to tapfer Punkt gebäude Punkt verliehen**

Three-word addresses from what3words are an alternative addressing system for multilingual georeferencing of global locations with a resolution of three metres. Using this grid, locations on the Earth's surface are included which do not have a building address such as a street and house number, for example.

 Three-word addresses are unique, easy to remember and suffice for most routine applications.

You can convert addresses to three-word addresses and back again:

- At the website <https://what3words.com>
- In the what3words apps

Selecting a destination on the map

Multimedia system:

  **Navigation**

- ▶ If necessary, move the map (→ page 422).
- ▶ Press and hold on the map.
Available destinations are displayed.

or

- ▶ Briefly press on a POI symbol.
The POI is selected. If there are several POIs at this map position, a list appears.
- ▶ Select the destination in the **Selected objects** list.
The following menu enables the route to be calculated.

Selecting a destination from favourites

Requirements:

- Destinations are saved as favourites.
Save a previous destination or a destination suggestion as a favourite (→ page 416).

Multimedia system:

  **Navigation** 

- ▶ Select **Favourites**.
- ▶ Select a favourite.
The route is calculated in the following menu.

Addresses for home and work are already set

- ▶ Select **Home** or **Work**.
The following menu enables the route to be calculated.

Addresses for home and work are not yet set

- ▶ Select **Home** or **Work**.
The prompt **No "Home" address available. Set address now?** appears, for example.
- ▶ Select **Yes**.
- ▶ Search for or select the address.

- ▶ Select **Save**.

Deleting favourites

- ▶ Select  for a favourite.
- ▶ Select **Delete**.

or

- ▶ Select **Delete all**.
- ▶ Confirm the prompt.
When all the favourites have been deleted, **Add favourite** is available, for example.

Selecting received destinations

Requirements:

- There is an Internet connection for receiving external destinations.
- A destination has been sent to the vehicle.
- Destinations have been shared from another seat in the vehicle.

Multimedia system:

The vehicle can receive destinations from services or apps. You will be informed when a destination is received.

▶ Select **Received destinations**.

▶ Select a destination.

The route is calculated in the following menu.

ⓘ You can save a received destination in the favourites (→ page 416).

Deleting received destinations

▶ Delete a destination with .

or

▶ Select **Delete all**.

Route

Calculating a route with Electric Intelligence

Requirements:

- The destination has been entered.
- The destination address is shown.

For Navigation with Electric Intelligence:

- Mercedes me connect is available.
 - You have a Mercedes me connect user account and the vehicle is connected with the account.
 - The "Navigation with Electric Intelligence" service is available and activated in the Mercedes me Portal.
- The services "Navigation with Electric Intelligence", "Display of charging stations" and "Mercedes me Charge" are required for optimal function.
- The **Schedule charging stops** route option is switched on (→ page 400).

Example: detailed display

- ① Calls up alternative routes
 - ② Calculates the route and starts route guidance
 - ③ Selects a point of interest in the vicinity of the destination
 - ④ Destination address
- The detailed display can contain additional entries, such as a three-word address from what3words, online content
- ⓘ If the destination is located in a multi-storey car park, for example, and corresponding data is available, the parking levels are displayed.

The route with Electric Intelligence is automatically and intelligently calculated to the destination. This is updated during route guidance. The route with Electric Intelligence contains the required charging stops as intermediate destinations. The charging stations are determined taking account of the driving distance and the estimated charging times.

- ▶ Select one of the options.
- ⓘ When the **Schedule charging stops** route option is switched off, a route without charging stations is calculated.

Saving a destination as a favourite

- ▶ Select  **Favourite**.
- ▶ Select an option.

Calling up the route overview

- ⓘ When **Schedule charging stops** is switched off, this option is available instead of the favourites function.
- ▶ Select **Routes**.
- ▶ Select an alternative route.

Starting route guidance

- ▶ Select  **Let's go!**.

Calling up the detailed display with destination address

- ▶ Pull the bar above the  **Let's go!** symbol upwards.
Depending on the destination selection and availability, online content, for example ratings, prices and weather information, is shown.
If the destination is in a different time zone, a message is displayed.
- ▶ **To share a destination:** select  **Share**.
This option allows you to scan the displayed QR code.
- ▶ **To call up an Internet address:** if a web address is available, select **Browser**.
- ▶ **To call the destination:** if a telephone number is available, select **Call**.

Searching for POIs in the vicinity of the destination shown

- ▶ Select **In the vicinity**.
- ▶ Search using categories, enter a search entry or search for a personal POI (→ page 393).

Adding an intermediate destination to the existing route or starting a new route guidance

- ▶ Select  **Add**.
The selected destination address is set as the next intermediate destination. Route guidance begins.
 - ▶ **There are already four intermediate destinations:** confirm the prompt with **Yes** and select an intermediate destination in the route overview (→ page 407) that should be overwritten with the new intermediate destination.
- or
- ▶ Select  **Replace**.
The selected destination address is set as a new destination. Route guidance begins.

- i** If you call up the menu during route guidance, more options are available:
- To change the order of destinations, select **Move** (→ page 408).
 - To delete the destination, select **Delete** (→ page 408).
 - To end route guidance, select **Cancel route guidance**.

Overview: Navigation with Electric Intelligence

If the **Schedule charging stops** route option is enabled, the optimal route based on time is calculated with the required charging stops. The charging stops are determined taking into account the route and charging times and are set as intermediate destinations for route guidance.

Navigation with Electric Intelligence constantly checks a large number of influencing variables, e.g. specifications for the climate control in the vehicle interior or changes in the weather. For each section of the route, the current energy requirement is calculated from the high-voltage battery. The multimedia system determines the

ideal charging stations along the route based on availability and charging power.

For each charging stop, the required amount of energy and the expected charging time is calculated and displayed. If the driver wishes, they will be informed by a notification on their mobile phone when the required state of charge is reached. The high-voltage battery continues to charge until the process is interrupted by the driver.

- i** Observe the notes on charging the high-voltage battery (→ page 232).

You can influence the route calculated by the Navigation with Electric Intelligence.

The options "Ignore charging station" and "Add charging station" are available for this purpose (→ page 407).

- i** Navigation with Electric Intelligence attempts to shorten the total travel time, if necessary, by using the following charging strategies:
- Charge twice briefly with high charging power instead of charging once for a long time with low charging power

- Charge once briefly with low charging power to reach a charging station with higher charging power

Navigation with Electric Intelligence uses the following data:

- **Online Route**
Route calculation establishes an Online Route. The Online Route is continuously updated during the journey, e.g. if traffic information is available.
 - **Specific vehicle information**
The current state of charge of the high-voltage battery and electrical consumption are taken into account, for example.
 - **Charging stations**
These are made available as intermediate destinations in the Online Route.
- i** This function is not available in all countries. You can watch an animation on this topic via the following link:

Switching on the Electric Intelligence route option

Multimedia system:

- ▶ Switch on the **Schedule charging stops** route option.

If the route has been calculated and the state of charge of the high-voltage battery is not sufficient to reach the destination, charging stations are set automatically as intermediate destinations.

- ⓘ This function is not available in all countries.

Selecting settings for charging stations on the route

Requirements:

- The "Navigation with Electric Intelligence" service is available and activated in the Mercedes me Portal.

The services "Navigation with Electric Intelligence", "Display of charging stations" and "Mercedes me Charge" are required for optimal function.

Multimedia system:

Setting the state of charge of the high-voltage battery when the charging station and destination are reached

- ▶ Select **Charge level at destination** or **Charge level at charging stations**.
- ▶ Move the control knob to the left or right and set the preferred state of charge in percent (%).

To reach a charging station, the system uses the battery capacity, e.g. up to 10 % residual energy content (state of charge) or even less. The **Min.** message appears on the central display. You can increase this state of charge for the arrival at the charging station and destination, e.g. to 25 % at the charging station and 50 % at the destination.

- ⓘ In the event of increased energy consumption while driving, e.g. with headwind, the following options are available from the system:
 - The charging station is safely reached even at states of charge of less than 10 %.

- Navigation with Electric Intelligence selects a closer charging station for the route.

- ⓘ If a charging facility is available at the destination, the state of charge can be lowered below 10 %. The **Min.** message appears on the central display. Make sure that the range monitor is switched on.
- ⓘ When planning a route, you can enter another destination or the return journey. The Navigation with Electric Intelligence then takes into account the required state of charge at the destination. This ensures that an optimal charging station or the new destination is reached safely on the onward journey.

Selecting a provider for charging stations

- ▶ Activate or deactivate **Mercedes me Charge**. If the option is activated, only charging stations payable with Mercedes me Charge are taken into account when selecting the charging station.

or

▶ Activate **All**.

All charging stations known to the navigation system are taken into account when calculating routes with Electric Intelligence, regardless of the type of payment.

It may be necessary to register with the provider.

- ❗ If route guidance is active, the high-voltage battery is tempered before a charging stop depending on the state of charge and the battery temperature.

■ Switching the range monitor on or off

Multimedia system:

  ▶▶ **Navigation** ▶▶  ▶▶ **Route**

The activated range monitoring assists with messages on the driver and central display to ensure safe arrival at the destination.

- ▶ Activate or deactivate **Range monitoring**. To reach the destination with the state of charge set by the driver, the range is permanently monitored when the option is switched on.

- ❗ If necessary, the range monitor in the speedometer shows a recommended maximum speed and informs you in the driver display, e.g. with the message **Avoid additional charging stop: drive less than 100 km/h**. Tips for saving energy are then also shown on the central display while driving.

- ❗ The recommended maximum speed is accounted for by the following driving systems:
 - Active Distance Assist DISTRONIC (→ page 279)
 - Cruise control (→ page 274)

- ❗ This function is not available in all countries.

■ Paying for charging on a route with Mercedes me Charge

Requirements:

- The Mercedes me Charge service is available and subscribed to in the Mercedes me Portal.
- The services "Navigation with Electric Intelligence", "Display of charging stations" and "Mercedes me Charge" are activated.

- **To select a charging station:** the **Schedule charging stops** option is switched on in the multimedia system.
- **For authentication at the charging station:** after activation in the Mercedes me Portal, you have concluded a charging contract with your payment details with the respective contractual partners.
- **For authentication using the app:** the Mercedes me App is installed on the external device, e.g. tablet or smartphone.
- For charging stations without remote access, you have purchased an RFID card for the contracting partner.

- ❗ This function is not available in all countries.
- Multimedia system:

  ▶▶ **Navigation**

- ❗ Observe the following information:
 - Read the notes on charging the high-voltage battery (→ page 232).

- Read the notes on charging the high-voltage battery at the charging station (→ page 238) and (→ page 239).
- **Before selection of a charging station:** the data for the charging stations is based on the online content available from the respective third-party provider.
- Observe the local information and conditions.

i With the Plug & Charge charging function of Mercedes me Charge, you can charge the vehicle at public Plug & Charge-enabled charging stations. The charging process starts immediately when the charging cable is plugged into the charging station. No further authentication is required. Communication between the vehicle and the charging station takes place directly via the charging cable. This charging function is not available in all countries.

▶ To select a charging station: tap on a symbol on the map for a charging station or on a group of symbols for several charging stations.

▶ If a group of symbols is selected, select the charging station from the list.

The following information is displayed (if available):

- Name of the charging station operator
- Address of the charging station
- Plug with availability and information about charging power
- Opening times
- Name of the charging station
- Travel time and distance of the charging station from the vehicle
- Authentication method
- Contact information of the charging station operator
- General costs and charging costs
- Estimated charging costs and your available energy volumes, if available
- Display of available reviews and the ability to review with up to five stars
- Availability prognosis

- Information on green charging
Mercedes-Benz provides high-quality certificates of origin to ensure that an equivalent amount of electricity from renewable sources is fed into the grid for charging processes carried out via Mercedes me Charge.

▶ Calculate the route (→ page 397).

i If the function is available, the start/stop of the charging process can be selected.

▶ To access a charging station remotely (start/stop): select a charging station in the map menu of the app or the MBUX multimedia system.

▶ Show the details using the widget (programme symbol).

▶ Select **Start charging process**.

The charging process starts. In addition, the payment agreement saved with the third-party provider is authorised.

i Remote access is not available for some charging stations. In this case use your RFID card to activate the charging process (if available).

- ▶ If required, enter the PIN for personalisation.
 - ▶ Confirm the action.
 - ▶ If required, select the connector ID from the list shown.
The selected charging cable connector is unlocked.
 - ▶ Start the charging process.
The start of the charging process is shown.
 - ▶ Select the **Stop charging process** display button in the app.
The charging process is ended.
Payment is processed automatically.
If data for third-party providers is available, you will receive this information:
 - Overview of the charging process
 - Estimated cost
- ⓘ There may be differences between the costs listed and the costs billed.

■ Overview of the Range on Map service

If there are only a few fast-charging stations or charging stations available within the vehicle's electric range, the service warns you with a notifi-

cation. The notification recommends charging stations made available to the service by charging station providers/operators.

The function is available under the following conditions:

- The "Range on Map" service, which is subject to a charge, is available and activated in the Mercedes me Portal.
- The route type **Online routes** is switched off (→ page 404).

There are three notification types:

- **Comfort warning**
There are no longer enough fast charging stations nearby.
- **Warning when electric range falls below 50 km**
As soon as the vehicle falls below the electric range of 50 km, the next charging stations in the vicinity are suggested.
- **Critical warning**
There are less than five charging stations including fast charging stations nearby.

- ⓘ If you do not want to receive notifications, deactivate the option **Allow notifications** (→ page 372) for the "Range on Map" service.

In addition, the electric range can be displayed on the map (→ page 427).

- ⓘ If the electric range of the vehicle is less than 6 km, there is no display on the map. If there are not enough charging stations available within this range, you will receive a notification.
- ⓘ If the route type **Online routes** is switched on, you will not receive any notifications.

■ Overview of charging near destination

The function is available under the following conditions:

- The destination has been entered.
- The destination address is shown.
- **For Navigation with Electric Intelligence:**
 - Mercedes me connect is available.

- You have a Mercedes me connect user account and the vehicle is connected with the account.
- The "Navigation with Electric Intelligence" service is available and activated in the Mercedes me Portal.

The services "Navigation with Electric Intelligence", "Display of charging stations" and "Mercedes me Charge" are required for optimal function.

The function suggests the best possible charging stop near the destination from which you can reach the destination on foot.

The digital map shows the following information, for example:

- The route to the destination
- The route to the charging stop
- The pedestrian route from the charging stop to the destination and the walking time in minutes

The following functions can be used, for example:

- Select the charging station as the destination and calculate the route.
- Move the map and reset the map to the current vehicle position.
- Change the map scale.
- Select additional map symbols, e.g. for displaying traffic information or hazard warnings from Car-2-X.

Selecting a route type

Multimedia system:

Using trailer mode and online routes

The route is calculated as a fast route with a short journey time.

Trailer mode is available if a trailer has been coupled with the vehicle. If available, you can select online routes.

-  Trailer mode and online routes are not available in all countries and for all vehicles.

- ▶ Select **Trailer mode**.
A prompt is shown in the multimedia system.
- ▶ Confirm the prompt.
The arrival time at the destination takes into account a reduced driving speed with trailer.
- ▶ **To use online routes:** switch on the option.

Taking traffic information for the route into account

- ▶ Select **Dynamic route guidance** .
- ▶ Select one of the options.

Explanation of the options:

- **Automatic**
Traffic reports via Live Traffic Information are taken into account (→ page 417).
Live Traffic Information and FM home screen are not available in all countries.
- **After asking**
A prompt appears when a new route is detected with a shorter journey time based on traffic reports. You can continue to use the current route or use the dynamic route instead (→ page 405).

- **Off**

No traffic reports are taken into account for the route.

■ Calculating alternative routes

Multimedia system:

  **Navigation**  **View**

- ▶ Switch on **Overview of route after start**. Alternative routes are calculated for every route.

■ Accepting a detour recommendation after a prompt

Requirements:

- **After asking** is switched on (→ page 404) in the **Dynamic route guidance** menu.
- Route guidance is active.
- There are traffic reports for the current route.

If a new route with a shorter driving time is determined, the current and new routes will be shown.

If another application is active, a notification is hidden.

- ▶ Confirm the notification.

- ▶ **To accept the new route:** select **Accept**.

- ▶ **To maintain the current route:** select **Keep to current route**.

■ Selecting route options

Multimedia system:

  **Navigation**  **Route**
▶ **Avoid options**

Avoiding or using route sections, e.g. motorways or ferries

- ▶ Activate or deactivate the avoid option.
Avoid: the option is activated. The route avoids motorways, for example.
Use: the option is deactivated. The route takes motorways into consideration, for example.

 The selected route options cannot always be taken into account. Therefore, a route may include a ferry, for instance, even though the **Avoid ferries** avoid option is enabled. A message then appears and you will hear a corresponding message.

Avoiding or using toll roads

The use of toll roads requires a usage fee (toll).

- ▶ Select **Toll roads** .

- ▶ Activate or deactivate **Avoid all**.

If the option is activated, the route avoids toll roads.

If the option is deactivated, the route takes toll roads into account.

or

- ▶ Select an option for **Payment by cash or card** or **Electronic billing**.

Avoid: the route avoids toll roads with the selected method of payment.

Use: the route takes into account roads that require a toll corresponding with the payment type selected.

Avoiding or using roads requiring a special toll sticker

A vignette allows for the use of a route network for a limited time period.

- ▶ Select **Avoid vignette roads** .

- ▶ Activate or deactivate **Avoid all**.

or

▶ Switch individual countries on or off in the list.
Avoid: the option is activated. The route avoids roads requiring a special toll sticker in the selected countries.

Use: the option is deactivated. The route takes into account roads in the selected country which require you to pay a time-based fee (vignette).

ⓘ These route options are not available in every country.

Avoiding or using areas with low emission zones

ⓘ The function is available when there is an active internet connection.

▶ Activate or deactivate **Area with low emission zones**.

Avoid: the option is activated. The route avoids all low emission zones restricted for the vehicle. These are displayed in red on the map.

Use: the option is deactivated. The restricted low emission zones for the vehicle are passed through on the route. A warning is displayed before you drive into a low emission zone.

Avoiding areas

▶ Select **Avoid areas**  (→ page 424).

Selecting notifications for the route

Requirements:

- **For an audible indication when approaching a personal POI:** the USB device contains personal POIs.
- The USB device is connected with the multimedia system.
- The category in which the personal POI belongs is activated.

Multimedia system:

  **▶▶ Navigation** 
 ▶▶ **Messages & tones**

Switching navigation announcements on or off

▶ Activate **Reduced messages**.

If a driving instruction is available for a simple change in direction, you hear a brief announcement, e.g. "turn right in 200 m". The number of driving instructions along the route is minimised.

▶ Activate **Detailed messages**.

If a driving instruction is available and there is a complex driving situation, you hear supplementary information, e.g. "In 200 m turn right and continue to follow the major road". Additional driving instructions are issued for the route, for example on turning major roads.

▶ Activate **Announce street names**.

The name of the street into which the vehicle should turn is announced.

ⓘ This option is not available in all countries and languages.

Switching traffic announcements on or off

▶ Activate or deactivate **Announce traffic warnings**.

If available, traffic warnings are announced, e.g. before the end of traffic jams that pose a risk.

Audible indication when approaching a personal POI

▶ Select **Personal POIs**.

- ▶ Activate a category.
When approaching a personal POI in the selected category an audible indication will be issued.

■ Displaying a route overview

Requirements:

- A destination is entered.

Multimedia system:

Example: route guidance is active

- ① Enters an address or POI
- ② Information about delays along the route

- ③ Arrival time and address for the charging stop
- ④ Charging stop shows the charging time recommended by the Navigation with Electric Intelligence as well as states of charge on arrival and onward journey for an optimal travel time
as well as: current distance to charging stop
- ⑤ Alternative routes
- ⑥ Searches for an additional charging station
- ⑦ Switches traffic information display on or off
- ⑧ Makes settings for [View](#), [Messages & tones](#) and [Route](#)

When route guidance is active, the destination and entered intermediate destinations are shown. Depending on the route, traffic situation and available data, further information is displayed:

- Name, destination address
- Symbols for intermediate destination and destination
- Phone number (if available)
- Web address (if available)
- Traffic information

The route can include up to four intermediate destinations.

You can influence the route calculated by the Navigation with Electric Intelligence using options ③ and ⑥.

- ▶ Select one of the options.

Ignoring a charging station

If you do not want to drive to the selected charging station, it can be removed for the current route guidance. The Navigation with Electric Intelligence tries to plan the best possible alternative charging station for the route.

- ▶ Select ③ .
The expected charging output, the dynamic charge level display as well as the current state of charge and the predicted charging target are displayed, for example.
- ▶ Select [Ignore](#).
- ▶ Select [Ignore during this journey](#).
The charging station is removed from the route.
- ⓘ After selecting [Details](#), the detailed information about the charging station is displayed.

Adding a charging station

If you want to drive to a charging station on the route earlier than planned, for example, you can search for an additional charging station. If the charging station is suitable for the route, it will be accepted by the Navigation with Electric Intelligence.

- ▶ Select **6**.
- ▶ If necessary, filter the display of the charging stations according to the charging power.
- ▶ Select a charging station.

Planning routes

Multimedia system:

- ▶ Enter the intermediate destination (→ page 25). After entering the destination and new calculation of the route, the route overview is shown again. The route contains a new intermediate destination.
- i** If there are already four intermediate destinations, delete an intermediate destination (→ page 408).

Editing a route with intermediate destinations

Requirements:

- The destination and at least one intermediate destination have been entered.

Multimedia system:

Changing the order of the destinations

- ▶ In the route overview, press and hold on a destination.
- ▶ Move the destination with **◀** or **▶**.
- ▶ Tap on **☑**.
- ▶ The editing mode is ended.

Deleting a destination

- ▶ In the route overview, press and hold on a destination.
- ▶ Tap on **🗑**.
- ▶ The editing mode is ended.

Displaying the route list

Multimedia system:

- ▶ Tap on navigation window **5** on the digital map (→ page 390).

Example: route list

- 1** Upcoming manoeuvre with turning arrow, distance to manoeuvre, street number, street name
- Switches on navigation announcements
- Switches off navigation announcements

Including the following route sections on the route to the destination

② Current vehicle position

The route sections are displayed in the navigation window. The route list is updated during the journey.

① Motorway information shows the available service facilities. After selecting symbols, e.g. for car parks, service areas or motorway exits, the POI is adopted as an intermediate destination or destination.

▶ Press the arrow at the bottom of the navigation window briefly.

▶ Swipe up or down.

▶ Select a route section.
The map section is displayed.

▶ **To return to vehicle position:** select **Current position**.

■ Selecting an alternative route

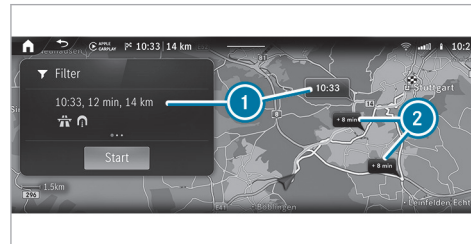

Requirements:

- A route has already been created.

- The **Overview of route after start** option is switched on (→ page 405).

Multimedia system:

🏠 ▶ Navigation ▶ Other routes

Example: alternative routes

- ① Original route is highlighted
- ② Alternative routes with indication of the difference in driving time
- ① In ② a faster route may also be shown that is considerably longer.

The following route information is displayed:

- Driving time

- Time of arrival
- Distance to the destination
- Avoid options based on the set route options
- Driving time saved or lost compared with the original route

▶ When the alternative routes have been calculated, display the route in the navigation window by swiping to the right or left.

Changing route type

▶ Select **Filter**.

▶ Switching the route type on or off.

Avoiding or using route options

▶ Select **Filter**.

▶ Switch the route options on or off (→ page 405).

▶ Confirm the settings with **Finished**.

▶ **To start route guidance to the alternative route:** select **Start**.

▶ **To select an alternative route on the map:** touch any point on the alternative route. The alternative route is highlighted.

■ Activating a commuter route

Requirements:

- You have created a profile (→ page 367).
- The **Allow destination suggestions** option is switched on (→ page 367).
- The **Commuter route** option is switched on .
- The multimedia system has gathered sufficient data in order to show destination suggestions.
- Routes have been learned for these destination suggestions.
- Route guidance is not active.

- ⓘ This commuter route is not available in all countries.

Multimedia system:

  **Navigation**  **Route**

- ▶ Activate **Commuter route**.
The navigation system automatically detects that the vehicle is on a commuter route.
For the daily commuter route, traffic incidents on the route are also reported when driving without active route guidance.

- ▶ **To select commuter route:** select **Start**.
Route guidance begins without spoken driving instructions.

- ⓘ A commuter route is suggested even with delays on the route.

- ▶ **To delete a commuter route:** select .

■ Starting the automatic service station search

Requirements

- ATTENTION ASSIST is activated (→ page 273).
- You are driving on a motorway.
- There are service stations along the route section ahead.

Driving situation

- ▶ Confirm the notification.
The service station search starts. The available service stations along the route or in the vicinity of the vehicle's current position are displayed.
- ▶ Select a service station.

- ▶ Calculate the route with the service station as an  intermediate destination or as a  destination (→ page 397).

- ▶ **If there are already four intermediate destinations:** select **Yes** in the prompt.
The selected service station is entered in the route overview at position 1. Intermediate destination 4 is deleted. Route guidance begins.

■ Starting and editing a stored route

Requirements:

- A USB device with stored routes is connected with the multimedia system (→ page 480).
- The route is stored in the "Routes" folder with the GPS Exchange format (.gpx).

Multimedia system:

  **Navigation** 

- ▶ Press the double arrow in the destination input line until **Stored routes** is displayed.
- ▶ Select **Stored routes**.

Starting a saved route

- ▶ Select a route.

- ▶ Select **Start: route guidance at start** or **Start: current location**.
Route guidance begins.

Renaming a route

- ▶ Press on a route until a menu is shown.
- ▶ Select **Rename**.
- ▶ Enter the name.
- ▶ Select **OK**.

Recording and storing a route

Requirements:

- A USB device is connected with the multimedia system (→ page 480).

Multimedia system:

- ▶ Press the double arrow in the destination input line until **Stored routes** is displayed.
- ▶ Select **Stored routes**.

Starting recording

- ▶ Select **Start recording**.
A white rectangle is displayed.

- ▶ The route is stored on the USB device.

Stopping recording

- ▶ Press the white rectangle.
- ▶ Select **End recording**.

Route guidance

Notes on route guidance

⚠ WARNING Risk of distraction from operating integrated communication equipment while the vehicle is in motion

If you operate communication equipment integrated in the vehicle when driving, you could be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- ▶ Only operate this equipment when the traffic situation permits.
- ▶ If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

You must observe the legal requirements for the country in which you are currently driving when operating the multimedia system. Route guidance begins once a route has been calculated. The road and traffic rules and regulations always have priority over multimedia system driving instructions. Driving instructions are, for example navigation announcements, changes in direction and lane recommendations.

Changes in direction and lane recommendations are shown in the navigation window.

The following displays and functions are also available in the navigation window, for example:

- Route list
- Destination information
- Traffic information, e.g. length of traffic jam, delay
- Motorway facilities
- Car park search
- Emergency corridors

If you do not follow the driving instructions or if you leave the calculated route, a new route is calculated automatically.

If, for example, the route is diverted or the direction of a one-way road has been reversed, driving instructions may deviate from the actual traffic situation.

Alternatives may be offered during route guidance, e.g. before passing a motorway exit road. The additional driving time for the journey along the motorway exit is shown.

For this reason, you must always observe road and traffic rules and regulations during your journey as well as the prevailing traffic conditions.

The route can differ from the ideal route, for example in the event of roadworks or incomplete digital map data.

Notes on satellite reception

The correct function of the navigation system depends amongst other things on reception of the satellite system used. In certain situations satellite reception can be impaired, malfunction or even not be possible, e.g. in tunnels or in multi-storey car parks.

Changing direction overview

Changes of direction are shown in the following displays:

- Detailed image of the junction
The display appears when you drive into a junction.
- 3D image
The display appears when driving on junction-free, multi-lane roads, for example at motorway exits and motorway interchanges.

Example: detailed image of the crossing with upcoming changes of direction

- 1 Name of the street to turn into
- 2 Change of direction arrow (also on the map)
- 3 Current vehicle position
- 4 Current distance to the change of direction

Example: 3D image of the upcoming change of direction

- ① Manoeuvre point
- ② Change of direction arrow (also on the map)
Larger map scales show change of direction points instead of change of direction arrows.
- ③ Current distance to the change of direction
- ④ Current vehicle position

There are three phases when changing direction:

- Preparation phase

If there is enough time between the changes of direction, the multimedia system prepares you for the upcoming change of direction. A

navigation announcement is issued, e.g. "Prepare to turn right".

The navigation window shows: the direction information or the name of the road which is to be turned into as well as the distance to the change of direction.

- Announcement phase

The multimedia system announces the upcoming change of direction, e.g. by announcing "Turn right in 300 m".

When the **Auto zoom** map orientation is switched off (→ page 426), a detailed representation of the junction or a 3D image of the upcoming change in direction appears in the navigation window.

- Change-of-direction phase

The multimedia system announces the imminent change of direction, e.g. by announcing "Now turn right".

Example of 3D image: when the distance to manoeuvre point ① is shown with 0 m and the symbol for current vehicle position ④ has

reached manoeuvre point ① the change in direction is carried out.

- ① Changes in direction are also displayed on the driver display and head-up display.

Lane recommendations overview

Example: lane recommendations

- ① Non-recommended lane (grey arrow)
- ② Possible lane (white arrow)
- ③ Recommended lane (white arrow, blue background)

This display appears for multi-lane roads.

If the digital map contains the relevant data, lane recommendations are displayed in the navigation window.

Explanation of the displayed lanes:

- Recommended lane

In this lane, you will be able to complete both the next change of direction and the one after that.

- Possible lane

In this lane, you will only be able to complete the next change of direction.

- Non-recommended lane

In this lane, you will not be able to complete the next change of direction without changing lane.

During the change of direction, new lanes may be added. Bus lanes are also shown.

 Lane recommendations are also displayed on the driver display and head-up display.

Using motorway information

When driving on the motorway, upcoming motorway facilities and available service facilities are

shown in the route list. These include car parks, service stations or motorway exits with service POIs, for example.

The entries are sorted according to increasing distance from the current vehicle position.

-  Select an entry.
-  If several service facilities are available, select a service facility from the list. The destination address and the map position are shown.
-  Calculate the route (→ page 397).

or

-  Search for a POI in the vicinity.

or

-  Use other functions, e.g. store the destination address of the service facility.

Destination reached

Once the destination is reached, you will see the  chequered flag. Route guidance will now be complete. The navigation menu is shown.

When an intermediate destination has been reached, you will see the intermediate destination

flag with the number of your  intermediate destination. Route guidance is continued.

Switching navigation announcements on or off

Switching off

-  During a navigation announcement, press the  button on the steering wheel or controller in the centre console. The **Spoken driving recommendations have been deactivated.** message appears.

or

-  In the route list for a driving manoeuvre select  (→ page 408). The symbol changes to .

Switching on

-  Press the button on the steering wheel or on the controller in the centre console again.

or

-  In the navigation window, select  for an upcoming driving manoeuvre. The current navigation announcement is played. The symbol changes to .

Switching navigation announcements on or off during a phone call

- ▶ Press the  button on the steering wheel on the right.

or

- ▶ Tap on  in the media display.
- ▶ Select **Settings**.
- ▶ Select **System**.
- ▶ Select **Audio**.
- ▶ Select **Navigation & traffic announcements**.
- ▶ Activate or deactivate **Driving recommendations during call**.
- ▶ **To leave the menu:** select .

Adjusting the volume of navigation announcements

Multimedia system:

- ▶  **▶▶ Settings ▶▶ System ▶▶ Audio**
- ▶ **▶▶ Navigation & traffic announcements**
- ▶ Select **Driving recommendation vol..**
- ▶ Set the volume.
- ▶ **To leave the menu:** select .

Route guidance is active

Switching audio fadeout on or off during navigation announcements

- ▶ Press the  button on the steering wheel on the right.

or

- ▶ Tap  on the central display.
- ▶ Select **Settings**.
- ▶ Select **System**.
- ▶ Select **Audio**.
- ▶ Select **Navigation & traffic announcements**.
- ▶ Activate or deactivate **Audio fadeout during navigation announcements**.
- ▶ **To leave the menu:** select .

Repeating navigation announcements

Requirements:

- A route has already been created.
- Route guidance is active.

Multimedia system:

- ▶  **▶▶ Navigation**

- ▶ In the navigation window, select  for an upcoming driving manoeuvre.
- ▶ Select .
- ▶ The current navigation announcement is repeated.

■ Cancelling route guidance

Requirements:

- A route has already been created.
- Route guidance is active.
- ▶ Show the navigation menu.
- ▶ Select  in the navigation menu (→ page 390).

■ Overview of off-road status during route guidance

Due to roadworks, for example, there may be differences between the data on the digital map and the actual course of the road. In such cases, the multimedia system will temporarily be unable to locate the vehicle's current position on the digital

map. The vehicle is off-road. **Road not mapped** will be shown. Route guidance may be restricted. When the vehicle is back on a road known to the multimedia system, route guidance continues as normal.

Destination

■ Saving the current vehicle position

Multimedia system:

- ▶ When the map is shown, tap on the  current vehicle position.
- ▶ Select **Store position**.
- ▶ **To save as a favourite:** select **Save as favourite**.
- ▶ **To save as "Home" address:** select **Home**.
- ▶ **To save as "Work" address:** select **Work**.

■ Managing previous destinations

Multimedia system:

- ▶ Select **Previous destinations**.
- ▶ Select  for the last destination.

Saving the last destination as a favourite

- ▶ Press and hold on one of the previous destinations. A menu appears.
- ▶ **To save as a favourite:** select **Save as favourite**.
- ▶ **To save as "Home" address:** select **Home**.
- ▶ **To save as "Work" address:** select **Work**.

Deleting a previous destination

- ▶ Select **Previous destinations**.
- ▶ For a last destination, select .
- ▶ Select **Delete**.

or

- ▶ Select **Delete all**.

- ▶ Confirm the prompt. When all the favourites have been deleted, **Add favourite** is available, for example.

■ Editing destination suggestions

Requirements:

- The **Allow destination suggestions** option is switched on (→ page 381).
- For the display of destination suggestions: the multimedia system has gathered sufficient data.

Multimedia system:

- ▶ Select **Suggestions**.
 - ▶ Press and hold on a destination suggestion. A menu appears.
 - ▶ **To cancel a destination suggestion:** select **Do not suggest now** or **No longer suggest**.
 - ▶ **To save a destination suggestion:** select **Save as favourite**, **Home** or **Work**.
-  Delete a destination suggestion from the favourites (→ page 396).

Route guidance with current traffic reports

Traffic information overview

Current traffic reports are received with the Live Traffic Information subscription service.

If the subscription has expired, then FM RDS-TMC is available in selected countries.

- ❗ Live Traffic Information is not available in all countries.

The service must be registered in the Mercedes me user account (→ page 417). This secures the free-of-charge period of three years.

The service updates the traffic situation via the Internet connection at short, regular intervals.

Information on the vehicle's position is regularly sent to Mercedes-Benz AG. The data is immediately rendered anonymous by Mercedes-Benz AG and forwarded to the traffic data provider. Using this data, traffic reports relevant to the vehicle's position are sent to the vehicle. The vehicle acts as a sensor for the flow of traffic and helps to improve the quality of the traffic reports.

- ❗ There may be differences between the traffic reports received and the actual road and traffic conditions.

If you do not want to transmit the vehicle position, you have the following options:

- You deactivate the service in the Mercedes me user account.
- You have the service deactivated at a Mercedes-Benz service centre.
- ❗ Further hazard warnings are received using the Car-to-X service (→ page 420).

Showing information from the service provider for Live Traffic Information

Requirements

- The vehicle is equipped with Live Traffic Information.

Multimedia system:

- ➔  ➔ Apps ➔ Mercedes me
- ➔ My services
- ➔ Select Live Traffic.

When the subscription for Live Traffic Information has expired then in selected countries FM RDS-TMC is available.

Registering Live Traffic Information

Requirements:

- The vehicle is equipped with Live Traffic Information.
- You have a Mercedes me user account.

- Create a Mercedes me user account at: <https://www.mercedes.me>. A valid email address is required for this.
- Register the vehicle using the vehicle identification number (VIN).
- Connect the vehicle with your Mercedes me user account. A code is sent to the multimedia system.
- Enter the code into the multimedia system.
- Accept the general and specific terms of use.

- ❗ Alternatively, you can have the connection completed at a Mercedes-Benz service centre.

■ Extending a Live Traffic Information subscription

Requirements:

- The vehicle is equipped with Live Traffic Information.
- You have a Mercedes me user account.
- ▶ Call up the Mercedes me website.
- ▶ Call up the Mercedes me user account.
- ▶ Switch to the Mercedes me Store via the linked vehicle.
- ▶ Select Live Traffic Information.
- ▶ Select the renewal period.
- ▶ Add the product to the shopping basket.
- ▶ Accept the general and specific terms of use. Live Traffic Information remains activated for the selected extension period. Activation begins on the date of extension.

■ Displaying traffic information on the map

Requirements:

- **Traffic incidents** and **Free-flowing traffic** are switched on (→ page 420).

Multimedia system:

- ▶ If necessary, move the map (→ page 422).

The map shows the following traffic information depending on the activated settings:

- **Traffic incidents**
These are roadworks, road blocks and warning messages, for example.
When route guidance is active, the symbols for traffic incidents will be shown in colour on the route. Off the route they are grey.
- **Warning messages**
Warning messages are shown as the  symbol.
Traffic safety information can be shown, e.g. if there are people on the carriageway.
If the vehicle approaches a danger area, for example the end of a traffic jam in a dangerous position, the  symbol is shown on the map. If **Announce traffic warnings** is switched on and a message has been issued, an additional announcement is made.

- **Traffic flow information:**
 - Traffic jam (red line)
 - Slow-moving traffic (orange line)
 - Heavy traffic (yellow line)
 - Free-flowing traffic (green line)
- **Display for traffic delays on the current route**
The smallest value for the display for traffic delays is a minute.

■ Showing traffic incidents on the route

Requirements:

- The **Traffic incidents** display is switched on (→ page 420).

Multimedia system:

If there are traffic incidents on the route, these are shown on the map and in the route overview.

- ① With the MBUX Voice Assistant you can inform yourself about traffic incidents on your route. Ask, for example **How is the traffic on my route?** or **How is the traffic at home?**. A voice output is issued.

Example: traffic incidents on the route

- 1 Total delay or message that there are no delays along the route
- 2 Switches traffic information display on or off
- 3 Calls up settings for **View**, **Messages & tones** and **Route**

If there are any delays along the route, these are shown in the route overview together with the following information:

- Traffic jam section: red bars
- Slow-moving traffic: orange bar
- Heavy traffic: yellow bar
- For each section:

- The delay
- The length
- The street name or the street number

- i During active route guidance, the total delay on the route is also displayed here:
- in the navigation system in the navigation module
 - in other applications in the status line at the top

Traffic incident symbols are shown in the route overview and in the map. A traffic incident symbol is, for example  for roadworks.

In the map several traffic incidents may be shown on top of each other. The traffic incident symbol shows a plus sign. If available, the street number can be replaced by a street name or both the name and number.

- i If a message about forming an emergency corridor has been issued, **Emergency corridor** is shown in the navigation window.

- ▶ To see all of the traffic incidents on the route, swipe to the right or left. The route section is highlighted on the map.
- ▶ **To show detailed information in the route overview:** tap on a display in the route overview. The detailed information is shown, for example the road section and the direction.

Calling up detailed information on the map

- ▶ Tap on traffic flow information on the map, e.g. a red line for a traffic jam section. The detail information is displayed.
- ▶ If several lines are shown on top of the other, then select an item of traffic flow information from the list.

Showing traffic incidents on the map

- ▶ Tap on a traffic incident symbol. The detail information is displayed.
- ▶ **Several traffic incidents are in the immediate vicinity:** tap on the top traffic incident symbol and select from the list of traffic incidents.

Switching the traffic information display on

Multimedia system:

▶ Select **View**.

▶ **Traffic**.

▶ Activate **Traffic incidents** and **Free-flowing traffic**.

Traffic incidents, for example roadworks, local area reports (e.g. fog) and warning messages, are shown on the route.

Car-to-X-Communication

Car-to-X-Communication overview

The following requirements apply for the Car-to-X-Communication service:

- The vehicle is equipped with an MBUX multimedia system with navigation function.
- There is a subscription for the Live Traffic Information service.
- The Car-to-X-Communication service is activated in your Mercedes me user account.

i Car-to-X-Communication is available in selected countries.

The communication module automatically establishes an Internet connection once the vehicle is switched on. If there are any hazard warnings, they will be provided shortly thereafter. Depending on the mobile phone connection, provision takes place from within a second up to about a minute.

Benefits of Car-to-X-Communication:

- Dangers are automatically detected by the vehicle or can be reported by the driver. These are then sent to vehicles with Car-to-X-Communication in the immediate vicinity.
- If available, current details relating to hazard spots near the vehicle's current position are received.

This gives you sufficient time to adapt your driving style to the traffic conditions.

The use of Car-to-X-Communication requires the regular transmission of vehicle data to Mercedes-Benz AG. The data is then immediately pseudonymised by Mercedes-Benz AG. The vehicle data is

deleted after an appropriate amount of time has elapsed (several weeks) and is not stored permanently.

i Data which serves as identification is replaced during the pseudonymisation process. In this way, your identity is protected against access by unauthorised third parties.

Displaying hazard warnings

Multimedia system:

If hazard warnings are available these can be shown as symbols on the map. The display depends on the settings for the **Traffic incidents** option.

- ▶ Set the option via  (→ page 420).
If the option is activated, all of the symbols are shown.
If the option is deactivated, the symbols are only shown when there is a hazard warning.

The following hazards may be shown on the map:

- Accidents and breakdowns
- Slippery roads, fog, crosswinds and heavy rain

- Hazards reported manually
 - Vehicle with active hazard warning light
 - Roadworks
 - Additional hazards (if available)
- ❗ If **Announce traffic warnings** is switched off (→ page 406), voice output can indicate a danger area.

■ Sending hazard warnings

Reporting hazards manually

- ❗ Automatically detected hazard warnings are sent by the vehicle.
- ▶ When the map is shown, tap on the  current vehicle position. The **Position** menu is shown.
 - ▶ Select **Report traffic incident**. A prompt is shown.
 - ▶ Select **Yes**. The **Thank you for supporting accident prevention!** message appears.

Route guidance with augmented reality

■ Overview of route guidance with augmented reality

⚠ WARNING Risk of accident and injury as a result of distraction, incorrect depiction or wrong interpretation of the display

The camera image of the augmented reality display is not suitable as a guide for driving.

- ▶ Always keep an eye on the actual traffic situation.
- ▶ Avoid extended observation of the camera image.

During route guidance with augmented reality a camera image with the real traffic scene is shown in the media display before a turning manoeuvre. The camera image includes additional information, for example arrows indicating a change of direction.

If the options are switched on and this additional information is available, road names and house numbers are displayed (→ page 422).

- ① House number
- ② Street name
- ③ Change of direction arrow

Route guidance with augmented reality will not be available in some situations, e.g. in the event of poor satellite reception or roads that have not been digitised.

Route guidance with augmented reality is not available in all countries.

You can watch an animation on this topic via the following link:

■ Activating route guidance with augmented reality

⚠ WARNING Risk of accident and injury due to imprecise positioning of additional information

The additional information from the augmented reality display may be inaccurate and is not a substitute for observing and assessing the actual driving situation.

▶ Always keep an eye on the actual traffic situation when carrying out all driving manoeuvres.

Multimedia system:

- ▶ Select **View**.
- ▶ Select **Augmented reality video**.
- ▶ Activate or deactivate **Augmented reality video**.

■ Showing property information for route guidance with augmented reality

Requirements:

- Augmented reality is activated (→ page 422).

Multimedia system:

- ▶ Select **View**.
- ▶ Select **Augmented reality video**.
- ▶ Activate **Street names** and **House numbers**. During route guidance, the activated options are shown as additional information in the camera image.

Map and compass

■ Setting the map scale

Multimedia system:

Zooming in

- ▶ When the map is shown, tap twice quickly with one finger on the media display.

or

- ▶ Move two fingers apart on the media display.

Zooming out

- ▶ Tap with two fingers on the media display.

or

- ▶ Move two fingers together on the media display.

i You can set the unit of measurement of the map scale (→ page 381).

■ Moving the map

Multimedia system:

- ▶ When the map is displayed, swipe in any direction with one finger on the media display.

The following functions are available:

- Selecting a destination on the map (→ page 396).
- Selecting a POI (→ page 393).
- Showing traffic incidents on the map (→ page 418).

- ▶ To reset the map to the current vehicle position: select  Centre .

Switching the route overview after start on or off

Multimedia system:

- ▶ Select **View**.
- ▶ Activate  or deactivate  **Overview of route after start**.
If the option is enabled, the map shows the full route after route guidance is started and, if available, all alternative routes.

Selecting POI symbols for the map display

Multimedia system:

POIs include restaurants and hotels, for example. These are displayed as symbols on the map. Not all POIs are available in all countries.

Personal POIs are destinations which you have saved on a USB device, for example.

- ⓘ The display of POI symbols on the map can be activated or deactivated as a favourite.

- ▶ Select **View**.
- ▶ Select **POI symbols on map** .
- ▶ Switch on **Hide all points of interest**.
When the option is switched on, the POI symbols for all categories are shown on the map according to the settings in the POI categories.
- ⓘ If the conditions are fulfilled, the POI symbols are shown with current online information (→ page 427).

Switching display of categories for quick-access on or off

- ▶ Switch a category on or off in the menu.

Selecting categories

- ▶ In the menu, select **Other categories** .
 - ▶ Activate or deactivate **Show all**.
When the option is switched on, the POI symbols for all categories are shown on the map.
- or
- ▶ Select  the categories.

- ▶ Activate or deactivate the categories.
The POI symbols for the selected categories are shown on the map.

Selecting personal POI categories

- ▶ In the menu, select **Personal POIs** .
- ▶ Select  a category.
- ▶ Activate or deactivate **Display on the map**.
- ▶ **To issue a signal when approaching:** activate **Visual warning** and **Acoustic notification**.

Resetting the POI symbol display

- ▶ In the menu, select **Reset POIs**.
The settings are reset to the standard settings.

Selecting the display of additional information on the map

Multimedia system:

- ▶ Select **View**.
- ▶ Select **Show additional information**.
- ▶ Switch the options on or off.

The following options are available:

- **Current street**

If the option is enabled, it will be displayed in the navigation window.

- **Scale**

If the option is switched off, the map scale is only displayed on the map when zooming.

If the option is enabled, the map scale is permanently displayed on the map.

The option also influences the display on the driver's display.

- **Altitude**

- **Next junction**

If the option is switched on and the journey continues without route guidance, the name of the next intersecting street will be displayed in the navigation window.

■ Displaying the map version

Multimedia system:

- ▶ Select **View**.

- ▶ Select **Map data version**.

The detail information is displayed.

- ⓘ The online map update service from Mercedes me connect can be used to update the map data (→ page 25).
- ⓘ Information about new versions of the digital map can be obtained from a Mercedes-Benz service centre.

■ Overview of area avoidance on the route

You can define areas along a route that you would like to avoid.

Motorways or multi-lane expressways that pass through an area to be avoided may be included in the route despite being blocked.

■ Avoiding a new area for the route

Multimedia system:

- ▶ Select **Avoid new area**.

Starting using the map

- ▶ Select **Using map**.

A red rectangle appears. This designates the area that should be avoided.

- ▶ Move the map (→ page 422).
 - ▶ Set the map scale (→ page 422).
 - ▶ Select **OK**.
- The area is entered into the list.

Starting using destination search

- ▶ Select **Via address entry**.
 - ▶ Enter the address (→ page 25).
 - ▶ Select the destination in the list.
- The map appears. The area is saved.

■ Changing an area to be avoided

Multimedia system:

- ▶ Select an area in the list.
- ▶ Select **Edit**.

Changing the size of the area

- ▶ Select **OK**.
The area is entered into the list.

Taking the area for the route into account

- ▶ Select the area in the list.
- ▶ Activate **Avoid area**.
If route guidance is active, a new route is calculated.
If there is no route yet, the setting is carried over to the next route guidance.
The route can include an area that is to be avoided in the following cases:
 - The destination is located in an area that is to be avoided.
 - The route includes motorways or multi-lane expressways which pass through an area to be avoided.
 - There is no practical alternative route.

Deleting an area to be avoided

Multimedia system:

 ▶▶ **Navigation** ▶▶  ▶▶ **Route**
 ▶▶ **Avoid areas**

Deleting an area to be avoided

- ▶ Select an area in the list.
- ▶ Select **Delete**.
- ▶ Confirm the prompt with **Yes**.

Deleting all areas to be avoided

- ▶ If at least two areas to be avoided are set, select **Delete all**.
- ▶ Confirm the prompt with **Yes**.

Map data update overview

As the content of a digital road map has a short life, outdated data may have a negative effect on all navigation functions. For the best MBUX navigation experience, you should install all of the map updates offered by Mercedes-Benz.

The following options are available for the update of map data:

- Online map update

- Updates from the Mercedes me Portal
- Update at a Mercedes-Benz service centre
Additional costs can be incurred in this process.

Online map update

Requirements:

- Mercedes me connect is available.
 - You have a Mercedes me user account.
 - The Online Map Update service is available for your region.
 - The service has been activated.
-  The Online Map Update service is only available in certain countries.

Installation takes place in the background as an automatic map update.

The MBUX multimedia system installs all of the available map updates for the European regions in which the vehicle is located or is moved.

The online map update is activated at the latest after the next time the vehicle is switched on.

Updates from the Mercedes me Portal

The map data for several regions can also be updated manually. Log in with your Mercedes me user account at: <https://www.mercedes-benz.de/>

Follow the menu path [My Mercedes Me account](#) > [My vehicles](#) > [Selection of car](#) > [Online Map Update](#). Select the regions to be downloaded to a storage medium.

After the map data has been copied, connect the storage medium with your vehicle. Select the notification with information about a new version of the map data and start the installation. After the MBUX multimedia system has been restarted, the updated map data is used.

Overview of map data

If map data is reinstalled in a vehicle, no activation code needs to be entered.

For map data purchased as data media, the enclosed activation code must be entered after starting the installation.

Activation codes are only ever valid for one vehicle.

In the event of the following problems, please contact a Mercedes-Benz service centre:

- The multimedia system does not accept the activation code.
- You have lost the activation code.

Displaying the compass

Multimedia system:

  **Navigation**

- ▶ When the map is shown, tap on the  current vehicle position until the **Position** menu is shown.
- ▶ Select **Compass**.

The compass display shows the following information:

- The current direction of travel with bearing (360° format) and compass direction
- Longitude and latitude coordinates in degrees, minutes and seconds
- Number of satellites from which a signal can be received

The information is not available in every country.

Displaying Qibla

Multimedia system:

  **Navigation**

- ▶ When the map is shown, tap on the  current vehicle position until the **Position** menu is shown.
- ▶ Select **Alerts**.
The arrow on the compass shows the direction to Mecca in relation to the current direction of travel.
The number of satellites received is shown.
- ▶  This function is not available in all countries.

Setting the map scale automatically

Multimedia system:

  **Navigation** 

- ▶ Select **View**.
- ▶ Activate  **Auto zoom**.
When the option is switched on, the map scale is set automatically depending on your driving speed and the type of road.

- i** The automatically selected map scale can be changed manually. After a few seconds, this is automatically reset. When the option is activated, no detailed display of the junction or a 3D image is shown in the navigation window during an upcoming driving manoeuvre.

■ Displaying the satellite map

Multimedia system:

▶ Select **View**.

▶ Activate or deactivate **Satellite map**.

When **Satellite map** is selected, they are displayed at the following map scales:

- On-board maps

The satellite maps are displayed in map scales from 2 km.

- Online maps

The satellite maps are displayed in high-resolution map scales from 10 m.

When **Satellite map** is not selected, no satellite maps are displayed.

- i** The satellite maps for these map scales are not available in all countries.

■ Showing electric range on the map

Requirements:

- There is an Internet connection.
- Mercedes me connect is available.
- You have a Mercedes me user account.
- The vehicle is connected with the user account and you have accepted the Mercedes me connect terms of use.

Further information can be found at: <https://www.mercedes.me>

- The service is available and has been activated.

Multimedia system:

▶ Select **View**.

▶ **Range**.

The electric range is shown on the map with a white line around the current vehicle position.

- i** The electric range display on the map is not available in all countries.

■ Displaying online map contents

Requirements:

- There is an Internet connection.
- Mercedes me connect is available.
- You have a Mercedes me user account.
- The vehicle is connected with the user account and you have accepted the Mercedes me connect terms of use.

Further information can be found at: <https://www.mercedes.me>

- The service is available and has been activated.

Multimedia system:

▶ Select **View**.

▶ Switch on an online service, e.g. **Weather**. Current weather information is displayed on the navigation map, e.g. temperature or cloud cover.

The service information is not shown in all map scales, e.g. weather symbols.

- ⓘ The display of online map content is not available in all countries.

Parking service

Notes on the parking service

! **NOTE** Vehicle damage due to failure to observe the maximum permissible clearance height

If the vehicle height exceeds the maximum permissible clearance height, the roof and other vehicle parts may be damaged.

- ▶ Please observe the indicated maximum clearance height.
- ▶ If the vehicle exceeds the permissible clearance height, do not drive in.
- ▶ Take the modified vehicle height in the case of roof superstructures or other carrier systems into account.

- ⓘ This service is not available in all countries.

Displaying parking options on the map

Requirements:

- Navigation Services is activated in your Mercedes me user account.
- The parking service is part of the scope of the Navigation Services.

Multimedia system:

- ▶ Switch on **Parking**.
The parking options within the vicinity of the current vehicle position are shown.

Selecting parking options

! **NOTE** Vehicle damage due to failure to observe local information and parking conditions

The data is based on the information provided by the respective service providers.

Mercedes-Benz does not guarantee the accuracy of the information provided in relation to the car park or parking area.

▶ Always observe the local information and conditions.

Requirements:

- Navigation Services is activated in your Mercedes me user account.
- The parking service is part of the scope of the Navigation Services.
- **Parking** is activated (→ page 428).

Multimedia system:

- ▶ Tap on **P** on the map.
- or

- ▶ In the route overview, select **P Parking spaces** (→ page 407).
- ▶ Select the search position and search filter, e.g. **Near destination** and **Multi-storey car parks**.
The map shows car parks suited to the selected settings.

▶ Select a parking option.

The following information is displayed (if available):

- Destination address, distance from current vehicle position and arrival time
- Information on the car park, e.g.
 - Opening times
 - Parking charges
 - Current occupancy
 - Maximum parking time
 - **Maximum access height**

The maximum access height shown by the parking service does not replace the need for observation of the actual circumstances.

- Available payment options (Mercedes pay, coins, bank notes, cards)
- Details on parking tariffs
- Number of available parking spaces
- Payment method (e.g. at parking meters)
- Services/facilities at the parking option

- Telephone number

▶ Calculate the route (→ page 397).

The following functions can be used (if available):

- Searching for POIs in the vicinity.
- Saving the destination.
- Placing a call at the destination.
- Sharing the destination via the QR code.
- Calling up the web address.
- Showing the destination on the map.

■ Prior booking of a parking space

Requirements:

- Navigation Services is activated in your Mercedes me user account.
- The parking service is part of the scope of the Navigation Services.
- You have registered with your payment details for the payment of parking in the Mercedes me Portal with Mercedes pay and the respective contract partner.
- **Parking** is activated (→ page 428).

 This option is not available in all countries.

Multimedia system:

  **▶ Navigation**

- ▶ Select a parking option on the map.
- ▶ If a parking space available to book has been selected, select **Book parking space**.
- ▶ Select the desired booking period. Take note of the cancellation conditions. If the parking space is available for the selected period, the price will be shown.
- ▶ Press **OK** to confirm.
- ▶ In the booking overview, confirm with **Book**.
- ▶ If required, enter the Mercedes me PIN. The parking space will be booked in the background. A booking confirmation including a car park ticket will be sent to your registered email address.

Making use of or cancelling the booking

- ▶ Start the Mercedes me App on your smartphone.

- ▶ Open **Menu**.
 - ▶ Select **My transactions**.
 - ▶ Select **Parking transactions**.
 - ▶ Select the desired booking.
 - ▶ **To make use of the booking:** select **Show car park ticket**.
- or
- ▶ **To cancel the booking:** select **Cancel booking**.
- ⓘ If possible, a parking space booking can be cancelled up to the stated time. If a booking cannot be cancelled, this will already be shown to you during the booking procedure.

Paying parking charges

Requirements:

- Navigation Services is activated in your Mercedes me user account.
- The parking service is part of the scope of the Navigation Services.
- You have registered with your payment details for the payment of parking in the Mercedes me Portal with Mercedes pay and the respective contract partner.

- **Parking** is activated (→ page 428).
- ⓘ This option is not available in all countries.
Multimedia system:

- ▶ Select a parking option on the map.
- ▶ If a car park that can be paid for has been selected, scroll down in the parking details.
- ▶ Select **Payment**.
Once the vehicle has reached a parking position with payment function and the vehicle is switched off, a message appears. Using this message you can pay from the vehicle and start the payment process.

Starting a payment procedure

- ▶ Acknowledge the message.
- ▶ Please note the maximum parking period displayed and any existing additional limitations. If required, a message will inform you about the necessity of displaying information confirming the online payment for the parking space.
- ▶ Select **Start the payment process**.

- ▶ If required, enter the Mercedes me PIN.
- ▶ Press **OK** to confirm.
The successful start of your parking transaction is shown.
- ▶ Complete the booking with **OK**.
- ▶ **To cancel a parking transaction:** after receiving the confirmation request, select **Cancel**.
Minimum charges may be incurred.

Ending a parking transaction

- ▶ Stop the active transaction using the Mercedes me app.
You receive a summary of the procedure and the costs.

If an uncompleted parking transaction is detected for your vehicle as you continue your journey, a message will appear asking whether you would like to end it.
- ▶ Acknowledge the message.
When the parking transaction is stopped successfully, another message appears with the details about your completed parking.

Dashcam

Notes on the dashcam

! **NOTE** Risk of legal consequences due to violation of legal regulations and data protection provisions

You are legally responsible for operation and use of the dashcam functions.

The legal requirements relating to operation and use of the dashcam can vary depending on the country in which the dashcam is operated.

This function is not permitted in all countries.

- ▶ Before using the dashcam, read up on the content of the legal regulations, in particular the data protection requirements in the respective country of use.
- ▶ Observe the legal regulations, in particular the data protection requirements.

- i** Observe the following instructions for safe operation:

 - Only use FAT32 or exFAT formatted USB storage devices.
 - Use USB-IF certified USB storage devices. USB-IF is a non-profit corporation and stands for USB Implementers Forum. Based on the USB specification, USB-IF certifies, for example, USB versions, corresponding cables and plugs as well as energy supply processes via the USB interface.
 - USB storage devices may be damaged if often or permanently overwritten at high speed. Mercedes-Benz recommends a high-quality external SSD drive. The abbreviation SSD stands for Solid State Drive.
- i** The file size and therefore the duration of single recording is limited by the limitations of the USB flash drive format. So FAT32 formatted USB flash drives do not allow files larger than 4 GB, for example.

When the file size is reached, the recording stops and you receive a notification.

- i** The following functions are available in the Gallery app:

 - Switching write protection on or off
 - Deleting video files

Additional information about the Gallery app .

Selecting a USB device for a video recording with the dashcam

Requirements:

- At least one USB device is connected with the multimedia system (→ page 480).

Multimedia system:

 **Dashcam**

- ▶ Select the USB symbol.
- ▶ Select the USB device.
- i** When USB devices contain multiple partitions, recorded video files are not always displayed in the recording list. Mercedes-Benz recommends that you use USB devices with one partition.

Starting or stopping a loop recording with the dashcam

Requirements

- For recording and saving a video file: a USB device is connected with the multimedia system (→ page 480).
- The vehicle is switched on.

Multimedia system:

 Apps >> Dashcam

- ▶ If several USB devices are connected with the multimedia system, select a USB device (→ page 431).
If no USB device is selected, a selection is made automatically when recording starts.
- ▶ **To select recording mode:** select **Loop recording**. **Loop recording** records several short video files. When the memory is full, recording is continued automatically. In doing so, other files will be overwritten starting with the oldest file.

- ▶ **To start:** select **Start recording**.
The length of the recording is shown. The **Do not remove the storage medium during recording. Before removing the storage medium, eject it first.** message appears. The video file is stored on the USB device.

- ▶ **To end:** select **End recording**.

 In some countries, geo-coordinates (longitude and latitude) are shown in the video image. For technical reasons, the geo-coordinates may show greater inaccuracies.

A report may appear in the following cases:

- The camera is not functional, the **Camera unavailable** message appears.
Have the camera checked in a Mercedes-Benz service centre.
- If the country border indication has been switched on (→ page 433).
- If an outdoor recording is started with the camera app during a dashcam recording, the dashcam recording pauses and resumes automatically after the camera recording is finished. A notification to this effect is displayed.

Starting or stopping individual recordings with the dashcam

Requirements

- For recording and saving a video file: a USB device is connected with the multimedia system (→ page 480).
- The vehicle is switched on.

Multimedia system:

 Apps >> Dashcam

- ▶ If several USB devices are connected with the multimedia system, select a USB device (→ page 431).
If no USB device is selected, a selection is made automatically when recording starts.
- ▶ **To select recording mode:** select **Individual recording**. **Individual recording** stops recording when the memory limit is reached. An individual recording is automatically protected against being overwritten.

▶ **To start:** select **Start recording**.

The length of the recording is shown. The **Do not remove the storage medium during recording. Before removing the storage medium, eject it first.** message appears. The video file is stored on the USB device.

▶ **To end:** select **End recording**.

- ⓘ In some countries, geo-coordinates (longitude and latitude) are shown in the video image. For technical reasons, the geo-coordinates may show greater inaccuracies.

A report may appear in the following cases:

- **Individual recording:** the memory is full or there are only a few minutes recording time available. The video recording stops or will be stopped imminently.
Change the USB device or delete a video file.
- The camera is not functional, the **Camera unavailable** message appears.
Have the camera checked in a Mercedes-Benz service centre.
- If the country border indication has been switched on (→ page 433).

- If an outdoor recording is started with the camera app during a dashcam recording, the dashcam recording pauses and resumes automatically after the camera recording is finished. A notification to this effect is displayed.

■ Configuring dashcam settings

Requirements:

- A USB device is connected with the multimedia system (→ page 480).

Multimedia system:

↶ →  ▶▶ **Apps** ▶▶ **Dashcam**

- ▶ Select .

Receiving notifications after passing a border crossing

- ▶ Switch on **National border alert**.
A message is shown if video is being recorded and the vehicle passes a border.
- ⓘ This function is not available in all countries.

Starting automatic video recording

- ▶ Select **Automatic loop recording**.

▶ Switch on **Automatic loop recording**.

When the vehicle is started, video recording starts automatically.

- ⓘ This function is not available in all countries.

Telephone

Telephony

■ Notes on telephony

⚠ WARNING Risk of distraction from operating integrated communication equipment while the vehicle is in motion

If you operate communication equipment integrated in the vehicle when driving, you could be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- ▶ Only operate this equipment when the traffic situation permits.
- ▶ If you cannot be sure of this, stop the vehicle whilst paying attention to road

and traffic conditions and operate the equipment with the vehicle stationary.

⚠ WARNING Risk of accident from operating mobile communication equipment while the vehicle is in motion

Mobile communication devices distract the driver from the traffic situation. This can also cause the driver to lose control of the vehicle.

- ▶ As a driver, only operate mobile communication devices when the vehicle is stationary.
- ▶ As a vehicle occupant, use mobile communication devices only in the designated area, e.g. in the rear passenger compartment.

You must observe the legal requirements for the country in which you are currently driving when operating the multimedia system and mobile communication equipment in the vehicle.

⚠ WARNING Risk of injury due to objects being stowed incorrectly

If objects in the vehicle interior are stowed incorrectly, they can slide or be thrown around and hit vehicle occupants. In addition, cup holders, open stowage spaces and mobile phone receptacles cannot always retain all objects within.

There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- ▶ Always stow objects so that they cannot be thrown around in such situations.
- ▶ Always make sure that objects do not protrude from stowage spaces, luggage nets or stowage nets.
- ▶ Close the lockable stowage spaces before starting a journey.
- ▶ Always stow and secure heavy, hard, pointed, sharp-edged, fragile or bulky objects in the boot/load compartment.

Observe the additional information on stowing mobile communications devices correctly:

- Loading the vehicle (→ page 170)
- Further information can be obtained from a Mercedes-Benz service centre or at: <https://www.mercedes-benz-mobile.com/>

■ Telephone menu overview

- ① Bluetooth® device name of the currently connected mobile phone/of the mobile phone
- ② Bluetooth® device name of the other currently connected mobile phone/of the mobile phone
- ③ Signal strength of the mobile phone network

- ④ Battery status of the connected mobile phone
- ⑤ Options
- ⑥ Messages
- ⑦ Calls up devices
- ⑧ Numerical pad
- ⑨ Starts contact search

Bluetooth® profile overview

Bluetooth® profile of the mobile phone	Function
PBAP (Phone Book Access Profile)	Contacts are automatically displayed in the multimedia system
MAP (Message Access Profile)	Message functions can be used
HFP (Hands Free Profile)	Wireless telephony is available

Telephony operating modes overview

Depending on your equipment, the following telephony operating modes are available:

- A mobile phone is connected to the multimedia system via Bluetooth® (→ page 435).
- Two mobile phones are connected with the multimedia system via Bluetooth® (two phone mode) (→ page 436).
 - You can use all the functions of the multimedia system with both mobile phones.

❗ Irrespective of this, Bluetooth® audio functionality can be used with any mobile phone (→ page 480).

Information on telephony

The following situations can lead to the call being disconnected while the vehicle is in motion:

- There is insufficient network coverage in the area
- You move from one transmission/reception station to another and no communication channels are free

- The SIM card used is not compatible with the network available
- A mobile phone with "Twincard" is logged into the network with the second SIM card at the same time

The multimedia system supports calls in HD Voice® for improved speech quality. A requirement for this is that the mobile phone and the mobile phone network provider of the person you are calling support HD Voice®.

Depending on the quality of the connection, the voice quality may fluctuate.

Connecting a mobile phone

Requirements:

- Bluetooth® is activated on the mobile phone (see the manufacturer's operating instructions).
- Bluetooth® is activated on the multimedia system (→ page 378).

Multimedia system:

 **Phone** **»»** **Devices**
»» **Devices**

Searching for a mobile phone

- ▶ Select **Connect new device**.

Authorising a mobile phone

- ▶ Select a mobile phone.
A code is displayed in the multimedia system and on the mobile phone.
- ▶ **If the codes match:** confirm the code on the mobile phone.
- ⓘ For older mobile phone models, enter a 1 to 16-digit number code on the mobile phone and on the multimedia system for authorisation.
- ⓘ Up to 15 mobile phones can be authorised on the multimedia system.
Authorised mobile phones are reconnected automatically.
- ⓘ The connected mobile phone can also be used as Bluetooth® audio equipment (→ page 480).

You can watch an animation on this topic via the following link:

▶ Connecting a second mobile phone (two phone mode)

Requirements

- At least one mobile phone is already connected to the multimedia system via Bluetooth®.

Multimedia system:

 **Phone** **»»** **Devices**
»» **Devices**

- ▶ Select **Connect new device**.
- ▶ Select the mobile phone.
- ▶ In some cases, if the query appears, confirm the selection of the mobile phone pair with the **Device name 1 + Device name 2** option.
The selected mobile phone is connected to the multimedia system.

▶ Interchanging mobile phones (two phone mode)

Multimedia system:

 **Phone**

Both mobile phones are shown individually in separate tabs.

- ▶ Select the tab with the desired mobile phone. Selecting the tab of a specific mobile phone displays the associated telephone contents. Selecting the other tab switches the view to the other telephone.
The submenus in the telephone menu (e.g. contacts, call lists, messages) relate to the currently selected mobile phone with the exception of the telephone settings. In the telephone settings, settings can be made for both mobile phones.

■ Changing the function of a mobile phone

Multimedia system:

Activating a function

- ▶ Select a grey symbol in the line of a mobile phone.
The corresponding function is activated.

Deactivating a function

- ▶ **One function is active:** select the coloured symbol in the line of a mobile phone.
The mobile phone is disconnected from the multimedia system.
- ▶ **Several functions are active:** de-select an active function in the line of one of the mobile phones.
The corresponding function is deactivated.

■ Replacing mobile phones

Multimedia system:

No authorised mobile phone available:

- ▶ Select **Connect new device**.
- ▶ Select a mobile phone.
- ▶ **Newly authorised mobile phone:** confirm the numerical code on the mobile phone.

Using in single telephone mode

- ▶ Select **Device name**.
A newly authorised mobile phone is connected in single telephone mode.
If the mobile phone has already been authorised and connected in single telephone mode, it is connected again in single telephone mode.
If a mobile phone is already authorised and has been connected in two phone mode with another mobile phone, a query may come, whether the mobile phone should in future be operated in single telephone mode or con-

ted with another mobile phone in two phone mode.

- ▶ If required, confirm the query about operating mode (single telephone or two phone mode) by confirming the **Device name** option.

Using in two phone mode

- ▶ Select **Device name 1 + Device name 2**.
A newly authorised mobile phone is connected with the selected mobile phone in two phone mode.
If the mobile phone has already been authorised and connected in single telephone mode, it will be connected in future with the selected mobile phone in two phone mode.
If the mobile phone was previously connected with another mobile phone, this connection is cancelled.

Disconnecting or deleting a mobile phone

Multimedia system:

  **Phone**  **Devices**

Disconnecting a mobile phone

- ▶ Select **Disconnect**.

If applicable, the mobile phone will be automatically reconnected when the vehicle is next started.

Deleting a mobile phone

- ▶ Select **Devices**.

- ▶ Select  in the line of the mobile phone.

- ▶ Select **Delete device**.

The mobile phone is deleted from the system.

Setting the reception and transmission volume

Requirements:

- A mobile phone is connected (→ page 435).

Multimedia system:

  **Phone**  **Devices**

▶ **Devices**

This function ensures optimal language quality.

- ⓘ Please note that the respective mobile phone must be selected for adjustment of the reception and transmission volume.

- ▶ Select  in the line of the mobile phone.

- ▶ Select **Volume**.

- ▶ Set the reception and transmission volume using **Reception volume** and **Transmission volume**.

Further information on the recommended reception and transmission volume: <https://www.mercedes-benz-mobile.com/>

Setting the ringtone

Multimedia system:

  **Phone**  **Ringtones**

- ▶ Set the ringtone.

- ⓘ If the mobile phone supports the transfer of the ringtone, you will hear the ringtone of the mobile phone instead of that of the vehicle audio system.

Starting or stopping mobile phone voice recognition

Requirements

- At least one mobile phone is connected to the multimedia system (→ page 435).
- The tab with the mobile phone for which voice recognition should be started is selected (→ page 436).

Starting mobile phone voice recognition

- ▶ Press and hold the  button on the multi-function steering wheel for more than one second.

Voice recognition is started for the currently selected mobile phone.

Stopping mobile phone voice recognition

- ▶ Press the  or  button on the multi-function steering wheel.

- ⓘ If a mobile phone is connected via Smartphone Integration, the voice recognition of this mobile phone is always started or stopped.

Note about contact suggestions

The multimedia system can show contact suggestions based on frequently used contacts, outgoing calls and text messages. For this, the **Allow contact suggestions** option must be switched on (→ page 381).

When you open the call list or the message menu, contacts which you can call or write to will be suggested to you. Suggestions will be shown in the **Suggestionstab**.

- ⓘ The multimedia system does not use the content of messages for suggestions.

Selecting options for contact suggestions

Requirements

- The **Allow contact suggestions** option is switched on (→ page 381).
- The multimedia system has gathered sufficient data in order to show contact suggestions.

Multimedia system:

- Select **Call list** or **Contacts**.

- Select **Suggestions**.

- Select in the line of the suggested contact.

The following option is available for selection:

- Do not suggest now**

Calls

Telephone operation

Multimedia system:

Making a call by entering numbers

- Select .
- Enter a number.
- Select .
- The call is made.

Accepting a call

- Select **Accept**.

Rejecting a call

- Select **Reject**.

Answering a call with a message

- Select **Answer w SMS**.

Ending a call

- Select .

Putting a call on In-Car Office's to-do list

- Select **Put call on In-Car Office's to-do list**.

Activating functions during a call

The following functions are available during a call:

- End call**
- Micro. off**
- Keypad** (show to send DTMF tones)
- Add call**
- Hands-free**

Transfer the call, e.g. to **Front**, **Rear** or **All seats**.

- Private mode**

Transfer the call to the telephone or headphones, for example.

- ▶ Select a function.
- ❗ Observe that the functions and symbols can vary depending on the vehicle equipment.

Conducting calls with several participants

Requirements

- There is an active call (→ page 439).
- Another call is being made.

Switching between calls

- ▶ Select the contact.
The selected call is active. The other call is on hold.

Activating a call on hold

- ▶ Select the contact of the call on hold.

Conducting a conference call

- ▶ Select  **Conference**.
The new participant is included in the conference call.

Ending an active call

- ▶ Select  **End call**.

- ❗ On some mobile phones, the call on hold is activated as soon as the active call is ended.

Accepting or rejecting a waiting call

Requirements

- There is an active call (→ page 439).

If you receive a call while already in a call, a message is displayed.

Depending on the mobile phone and mobile phone network provider you will hear a call waiting signal.

Alternatively, in two phone mode you will hear an acoustic signal when the call goes through to the other (not yet active) mobile phone.

- ▶ Select  **Accept**.
The incoming call is active.

If only one mobile phone is connected with the multimedia system, the previous call will be put on hold.

If during a call you accept a call with the other mobile phone when in two phone mode then the existing call is ended.

or

- ▶ Select **Answer w SMS**.
The incoming call is not accepted.
You answer with a message.

or

- ▶ Select  **Reject**.

- ❗ The function and the behaviour depend on your mobile phone network provider as well as on the mobile phone (see the manufacturer's operating instructions).

Using the international dialling code

Multimedia system:

- ▶ Press and "0" until a "+" appears in the selection field.
- ▶ Enter the numbers of the country code, regional code and the telephone number.
- ▶ Select .
The call is made.

Contacts

Information about the contacts menu

The contacts menu contains all contacts from existing data sources, e.g. mobile phone or data storage medium.

Depending on the data source, it is possible to save/load the following number of contacts:

- Permanently saved contacts: 3,000 entries
- Contacts loaded from the mobile phone: 5,000 entries per mobile phone

From the contacts menu, you can perform the following actions:

- Make a call, for example call a contact (→ page 442)
- Navigation (→ page 394)
- Compose messages (→ page 444)
- Additional options (→ page 442)

Mobile phone contacts are automatically displayed when a mobile phone is connected to the multimedia system (→ page 435).

Downloading mobile phone favourite contacts

If the mobile phone supports the function, the favourites of the mobile phone are automatically loaded and appear in the overview of the phone menu.

Calling up contacts

Multimedia system:

  **Phone** **Contacts**

The following options can be used to search for contacts:

- Searching by initials
- Searching by name
- Searching by phone number
- ▶ Enter characters into the search field.
- ▶ Select the contact.

A contact can contain the following details:

- Phone numbers
- Navigation addresses
- Internet address
- Email addresses

- Relationship (if set)

Managing the format of a contact's name

Multimedia system:

  **Phone** 

- ▶ Select **Contacts**.
- ▶ Select **Name format**.
- ▶ Select an option.

Overview of importing contacts

Importing contacts into the contacts menu

Source	Requirements
 USB device	The USB device is connected with the USB port.
Mobile phone	A mobile phone is connected to the multimedia system via Bluetooth®. Contacts are available.

 Note that the imported contacts remain in the vehicle and can be accessed at any time regardless of the connected mobile phones.

■ Importing contacts into the contacts menu

Multimedia system:

 **Phone**  **Contacts**
Import contacts

-  Select a mobile phone <device name>, from which the contacts should be imported.
-  Select an option.

■ Saving a mobile phone contact

Multimedia system:

 **Phone** **Contacts**

-  Select  in the line of the mobile phone contact.
 -  Select .
 -  Select **Save**.
 -  Select **Yes**.
- The contact saved in the multimedia system is identified by the MBUX symbol.

■ Calling a contact

Multimedia system:

 **Phone** **Contacts**

-  Select  **Search contacts**.
 -  Enter characters into the search field.
 -  Select the contact.
 -  Select the telephone number.
- The number is dialled.

■ Selecting further options in the contacts menu

Multimedia system:

 **Phone** **Contacts**

-  Select  in the line of the contact.
-  Select .
-  Select an option.

■ Deleting contacts

Requirements

- The contacts are saved in the vehicle.
- To delete an individual contact, this has been imported manually into the vehicle.

Multimedia system:

 **Phone**

Deleting all contacts

-  Select .
-  Select **Contacts**.
-  Select **Delete all MBUX contacts**.
-  Select an option.

Deleting a contact

-  Select **Contacts**.
-  Select  in the line of the contact.
-  Select .
-  Select **Delete contact**.
-  Select **Yes**.

Call list

■ Overview of the call list

Depending on whether your mobile phone supports the PBAP Bluetooth® profile or not, this can have different effects on the presentation and functions of the call list.

If the PBAP Bluetooth® profile is supported, the effects are as follows:

- The call lists from the mobile phone are displayed in the multimedia system.
- When connecting the mobile phone, you may have to confirm the connection for the PBAP Bluetooth® profile.

If the PBAP Bluetooth® profile is not supported, the effects are as follows:

- The multimedia system generates a call list independently as soon as calls are made in the vehicle.
- The call list is not synchronised with the call lists in the mobile phone.

■ Making a call from the call list

Multimedia system:

- ➔  ➔ Phone
- ▶ Select  Call list.
- ▶ Select an entry.
- ▶ The call is made.

■ Selecting additional options in the call list

Multimedia system:

- ➔  ➔ Phone
- ▶ Select  Call list.
- ▶ For contacts that are in the address book: select options.
The contact details are called up.
- ▶ For contacts where only one number is shown (not in the address book): select .

■ Deleting the call list

Multimedia system:

- ➔  ➔ Phone ➔ <Device name>
- ▶  ➔ Devices
- ▶ Select Delete call list.
- ▶ Select Yes.
- ⓘ This function is only available if your mobile does not support the PBAP Bluetooth® profile.

Text messages

■ Overview of message functions

In the message menu you can receive text messages and create and send them with the help of the MBUX voice assistant.

If the connected mobile phone supports the Bluetooth® MAP profile, the message functions can be used on the multimedia system.

You can obtain further information about settings and supported functions of Bluetooth®-capable mobile phones at a Mercedes-Benz service centre or at: <https://www.mercedes-benz-mobile.com/>

Some mobile phones require further settings after being connected to the multimedia system to activate the messaging functionality (see manufacturer's operating instructions).

■ Setting message displays

Multimedia system:

- ➔  ➔ Phone ➔ <Device name>
- ▶  ➔ Devices
- ▶ Select Message display.
- ▶ Select On or Off.

Reading messages

Multimedia system:

Using the read-aloud function

A message list is shown.

- ▶ To read aloud, select the  symbol at a conversation.
The message is read aloud.

Creating and sending a new message

Requirements

- There is an Internet connection.
- At least one mobile phone with reception is connected.
- If applicable, the message function must be activated on the mobile phone.

Multimedia system:

- ▶ Using the MBUX voice assistant, speak the voice command **Send a message to**, and name the desired contact (→ page 348).

Dictating text

- ▶ Say the message.
You are guided by the voice dialogue.

Replying to a message in the messaging history

Multimedia system:

A message list is shown.

- ▶ Select  next to a contact.
The messaging history with this contact is shown. You will be guided through the steps with the help of a voice dialogue.
- ▶ Say the message.

Forwarding messages

Multimedia system:

A message list is shown.

- ▶ Speak the voice command **Forward message**.
You are guided by the voice dialogue.

Calling a message sender

Multimedia system:

A message list is shown.

- ▶ Select  next to a contact.
The messaging history with this contact is shown.
- ▶ Select .
- ▶ Select **Call**.

Using telephone numbers, URLs or email addresses from a text message

Requirements

- An Internet connection is available to call up a URL.

Multimedia system:

A message list is shown.

- Select  next to a contact. The messaging history with this contact is shown.
- Select a telephone number or a URL in the message. If a URL is selected the web browser opens. If a telephone number is selected the following options are available:
 - Call
 - New message

or

- If **In-Car Office and the email function are available**: select an email address. In-Car Office opens.

 The availability of In-Car Office is country-dependent.

- Select an option.

Deleting a message

Multimedia system:

A message list is shown.

- Select a contact.
- Press and hold on a message.
- To delete the message**: select **Delete**.

In-Car Office

In-Car Office functions

Using In-Car Office, you can connect your online services to the multimedia system.

The following functions are available:

- Calendar

Showing appointments and triggering actions, e.g. reading aloud, placing a call, navigating

- E-mail
 - Reading, reading aloud, creating, answering and forwarding e-mails
 - Tasks and calls
 - Managing tasks and pre-booked calls
 - Voice input
 - Creating appointments/reminders and tasks
-  Alternatively, you can record text contents via the MBUX voice assistant or via the dictation function. Further information on the MBUX Voice Assistant (→ page 349).
-  Please note that certain functions are only available when the vehicle is stationary.

Calling up In-Car Office

Requirements:

- You have a Mercedes me user account.
- The In-Car Office service is activated in your Mercedes me user account.

- You have a user account with an online service, for example Office 365 or Gmail.
In this way, appointments, e-mails and tasks can be synchronised and facilitated.

Multimedia system:

  Apps

- Select **In-Car Office**.
Individual functions from In-Car Office can be called up.

Linking a user account

- Select the desired online service.
- Scan the QR code.
- Follow the instructions on the device.

Selecting calendar functions in In-Car Office

Multimedia system:

  Apps  In-Car Office
 Calendar

- Select an appointment.

The following functions are available:

-  **Read aloud**

-  **Call**
-  **Navigate**
-  **Delete**

- Select a function.

 Functions are available if corresponding appointment information is saved.

Examples of this are:

- If a telephone number has been saved for the appointment, **Call** is available.
- If a navigable address has been saved in the Online Account for the appointment, **Navigate** is available.

Selecting functions of Tasks & Calls in "In-Car Office"

Multimedia system:

  Apps  In-Car Office
 Tasks & calls

- Select a function for an entry.

The following functions are available:

- Reading aloud 

- Placing a call 

This task function requires a telephone number.

- Marking as completed 

In the current edit, an entry that has been marked as completed can be marked as open again by removing the tick.

- Deleting 
- Displaying details 

Marking an entry as completed in Tasks & Calls

Multimedia system:

  Apps  In-Car Office
 Tasks & calls

- Select **Tasks & calls**.
An overview appears.
- Select .

Reading and managing e-mails

Multimedia system:

  Apps  In-Car Office  E-mail

- Select an e-mail.
The e-mail is opened.

Additional functions are available:

- ▶  Reading e-mails
- ▶  Answering e-mails (→ page 447)
- ▶  Forwarding e-mails (→ page 447)
- ▶  Deleting e-mails

■ Creating new e-mails

Multimedia system:

↳  ▶▶ Apps ▶▶ In-Car Office ▶▶ E-mail

▶ Select  **Create e-mail** .

▶ Select .

▶ Enter an e-mail address directly via the keyboard.

or

▶ Select an e-mail address from the contacts.

- ⓘ Contacts can be used from the contacts menu or from linked online services such as Office 365 or Gmail. Further information about the contacts menu (→ page 441).
- ⓘ Please note that e-mails can only be written when the vehicle is stationary.

▶ Enter the subject and text of the e-mail in the corresponding fields with the keypad.

▶ Select **Send**.

■ Answering e-mails

Multimedia system:

↳  ▶▶ Apps ▶▶ In-Car Office ▶▶ E-mail

▶ Select an e-mail.

▶ Select **Reply**.

▶ Enter the e-mail text in the corresponding field using the keypad.

▶ Select **Send**.

- ⓘ Please note that e-mails can only be written when the vehicle is stationary.

■ Forwarding e-mails

Multimedia system:

↳  ▶▶ Apps ▶▶ In-Car Office ▶▶ E-mail

▶ Select an e-mail.

▶ Select **Forward**.

▶ **To forward with attachment:** select **Forward with attachment**.

- ⓘ Contacts can be used from the contacts menu or from linked online services such as Office 365 or Gmail. Further information about the contacts menu (→ page 441).

- ⓘ Forwarding with an attachment is only possible if an attachment is available.

▶ **To forward without attachment:** select **Forward without attachment**.

▶ Enter the e-mail text in the corresponding field using the keypad.

▶ Select **Send**.

■ Operating In-Car Office using the MBUX Voice Assistant and dictation function

Multimedia system:

↳  ▶▶ Apps ▶▶ In-Car Office ▶▶ E-mail

Operating In-Car Office using the dictation function

The dictation function allows you to dictate text content, such as the subject or text of an e-mail, instead of typing the content using the keyboard.

- ⓘ The dictation function is not available everywhere with the full range of functions. For the first-time activation of the function it may be necessary to accept the Mercedes me connect terms of use in your Mercedes me user account.

The following is an example of how you can dictate the subject and text of an e-mail.

- ▶ Select  **Create e-mail**.
- ▶ Add recipients using .
- ▶ Select . The dictation function is started.
- ▶ Dictate the subject and text of the e-mail. After the voice input has been processed, it is shown as text.
- ▶ Select **Send**.

Operating In-Car Office using the MBUX Voice Assistant

With the voice control of the MBUX Voice Assistant you can operate various functions of In-Car Office and speak in text contents.

- ⓘ Further information on operating the MBUX Voice Assistant (→ page 348).

The following are examples of some voice commands that you can use to operate In-Car Office.

- ▶ **To write new e-mail:** say the voice command **I want to send an e-mail to John Doe**. You are guided by the dialogue.
- ▶ **To reply to an e-mail:** say the voice command **Reply to e-mail**. You are guided by the dialogue.
- ▶ **To forward an e-mail:** say the voice command **Forward e-mail**. Dictate the text of the e-mail.
- ▶ **To show tasks:** say the voice command **Show my tasks**. The tasks are shown.
- ▶ **To create a calendar entry:** say the voice command **Create a calendar entry tomorrow at 9 a.m.** You are guided by the dialogue.

Apple CarPlay®

Overview of Apple CarPlay®

⚠ WARNING Risk of distraction from information systems and communications equipment

If you operate information systems and communication devices integrated in the vehicle when driving, you could be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- ▶ Only operate this equipment when the traffic situation permits.
- ▶ If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

You must observe the legal requirements for the country in which you are currently driving when operating the multimedia system. iPhone® functions can be used via the multimedia system using Apple CarPlay®. They are operated

using the touchscreen, Touch Control or Siri® voice control. You can activate voice control by pressing and holding the  button on the multifunction steering wheel.

- ❶ By briefly pressing the  button on the multifunction steering wheel you can continue to operate the multimedia system using the MBUX Voice Assistant (→ page 348).

Only one iPhone® at a time can be connected via Apple CarPlay® with the multimedia system.

Also for use of Apple CarPlay® with two phone mode, only one additional mobile phone can be connected using Bluetooth® with the multimedia system.

As access to the iPhone® is restricted by MBUX when an Apple CarPlay® session is active, not all MBUX functions (e.g. dialling from the address book) can be fully provided for the connected device. In this case use Apple CarPlay®.

The full range of functions for Apple CarPlay® is only available with an Internet connection.

The availability of Apple CarPlay® may vary according to the country.

The service provider is responsible for this application and the services and content connected to it.

Apple CarPlay® is a registered trademark of Apple Inc.

You can watch an animation on this topic via the following link:

■ Information on Apple CarPlay®

The Apple CarPlay® symbol in the status line switches within Apple CarPlay® to the last active display.

If route guidance is active on the multimedia system, it is closed when route guidance is started on the mobile phone.

■ Connecting an iPhone® via Apple CarPlay® (wired)

Requirements:

- The current version of your device's operating system is being used (see the manufacturer's operating instructions).

- ❶ For safety reasons, the first activation of Apple CarPlay® on the multimedia system must be carried out when the vehicle is stationary and the parking brake applied.

- ▶ Connect the iPhone® to a USB port on the multimedia system using a suitable cable (→ page 480).
When the application is connected for the first time, a message about data protection regulations appears.
- ▶ Select **Accept & start** if the application should be started.

or

- ▶ Open the device manager (→ page 436).
- ▶ Start Apple CarPlay® using the relevant symbol next to the device name.
- ❶ If applicable, a message about data protection regulations appears.
- ▶ If required confirm the use of Apple CarPlay® on your iPhone®.

Exiting Apple CarPlay®

- ▶ Select .

or

▶ Press the  button on the multifunction steering wheel (MBUX multimedia system).

❗ If Apple CarPlay® was not displayed in the foreground before disconnecting, the application starts in the background when reconnected. You can call up Apple CarPlay® using the Apple CarPlay® symbol in the status line.

■ Connecting an iPhone® via Apple CarPlay® (wireless)

Requirements

- The current version of your device's operating system is being used (see the manufacturer's operating instructions).
- Bluetooth® is activated on the device (see the manufacturer's operating instructions).
- The device is "visible" for other devices.

❗ For safety reasons, the first activation of Apple CarPlay® on the multimedia system must be carried out when the vehicle is stationary and the parking brake applied.

Multimedia system:

▶  ▶ Phone ▶  ▶ Devices

▶ Connect the mobile phone using Bluetooth® (→ page 435).
When the application is connected for the first time, a message about data protection regulations appears.

▶ Select **OK, start Apple CarPlay** if the application should be started.

▶ If required confirm the use of Apple CarPlay® on your iPhone®.

❗ It is possible at any time to switch between connection via Bluetooth® or Apple CarPlay® (wireless) in the device list.

❗ If you have already connected a mobile phone via Bluetooth®, you can connect another iPhone® via Bluetooth® to use Apple CarPlay® via the device manager.

Exiting Apple CarPlay®

▶ Select .

or

▶ Press the  button on the Touch Control (MBUX multimedia system).

❗ If Apple CarPlay® was not displayed in the foreground before disconnecting, the application starts in the background when reconnected. You can call up Apple CarPlay® using the Apple CarPlay® symbol in the status line.

■ Calling up Apple CarPlay® sound settings

Multimedia system:

▶  ▶ Settings ▶ System ▶ Audio

▶ Select the sound settings.

■ Ending Apple CarPlay®

▶ Select the Apple CarPlay® symbol in the device manager (telephone, media) that is next to the device name of the iPhone®.

❗ Select the Apple CarPlay® symbol in the device manager in the telephone or media applications if Apple CarPlay® should be restarted.

- i** If Apple CarPlay® was not displayed in the foreground before disconnecting, the application starts in the background the next time it is started automatically. You can call up Apple CarPlay® using the relevant symbol in the status line.

Android Auto

■ Android Auto overview

⚠ WARNING Risk of distraction from information systems and communications equipment

If you operate information systems and communication devices integrated in the vehicle when driving, you could be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- ▶ Only operate this equipment when the traffic situation permits.
- ▶ If you cannot be sure of this, stop the vehicle whilst paying attention to road

and traffic conditions and operate the equipment with the vehicle stationary.

You must observe the legal requirements for the country in which you are currently driving when operating the multimedia system. Mobile phone functions can be used with Android Auto using the Android operating system on the multimedia system. They are operated using the touchscreen, Touch Control or voice control. You can activate the voice control system by pressing and holding the  button on the multifunction steering wheel.

- i** By briefly pressing the  button on the multifunction steering wheel you can continue to operate the multimedia system using the MBUX Voice Assistant (→ page 348).

Only one mobile phone at a time can be connected via Android Auto with the multimedia system. Also for use of Android Auto with two phone mode, only one additional mobile phone can be connected using Bluetooth® with the multimedia system.

The full range of functions for Android Auto is only possible with an Internet connection.

The availability of Android Auto and Android Auto apps may vary according to the country.

The service provider is responsible for this application and the services and content connected to it.

You can watch an animation on this topic via the following link:

■ Information on Android Auto

The Android Auto symbol in the status line switches within Android Auto to the last active display.

If route guidance is active on the multimedia system, it is closed when route guidance is started on the mobile phone.

■ Connecting a mobile phone via Android Auto (wired)

Requirements:

- The mobile phone supports Android Auto from Android 5.0.

- The current version of the Android Auto app is installed on the mobile phone.
- In order to use the telephone functions, the mobile phone must be connected to the multimedia system via Bluetooth® (→ page 435).
If there was no prior Internet connection, this is established with the use of the mobile phone with Android Auto.

i For safety reasons, the first activation of Android Auto on the multimedia system must be carried out when the vehicle is stationary with the parking brake.

- ▶ Connect the mobile phone to a USB port on the multimedia system using a suitable cable (→ page 480).
When the application is connected for the first time, a message about data protection regulations appears.
- ▶ Select **Accept & start** if the application should be started.

or

- ▶ Open the device manager (→ page 436).

- ▶ Start Android Auto using the relevant symbol next to the device name.

Exiting Android Auto

- ▶ Select .

or

- ▶ Press the  button on the Touch Control (MBUX multimedia system).

i If Android Auto was not displayed in the foreground before disconnecting, the application starts in the background when reconnected. You can call up Android Auto using the Android Auto symbol in the status line.

■ Connecting a mobile phone via Android Auto (wireless)

Requirements

- The current version of your device's operating system is being used (see the manufacturer's operating instructions).
- The device supports the Android Auto function (wireless).
- Bluetooth® is activated on the device (see the manufacturer's operating instructions).

- The device is "visible" for other devices.
- Bluetooth® is activated on the multimedia system (→ page 378)

- i** For safety reasons, the first activation of Android Auto on the multimedia system must be carried out when the vehicle is stationary with the parking brake.
- i** The Android Auto function (wireless) is not available in all countries.

Multimedia system:

  **▶▶ Phone**  **▶▶ Devices**

- ▶ Connect the mobile phone using Bluetooth® (→ page 435).
- i** Depending on the device configuration, the query whether Android Auto should be started may appear after connecting the mobile phone via Bluetooth®. In this case, the query must be answered with **Yes**.
- ▶ Select **Start Android Auto**.
When the application is connected for the first time, a message about data protection regulations appears.

▶ Select **Accept & start**.

- ❶ It is possible at any time to switch between connection via Bluetooth® or Android Auto (wireless) in the device list.
- ❷ If you have already connected a mobile phone via Bluetooth®, you can connect another mobile phone via Bluetooth® to use Android Auto via the device manager.

Exiting Android Auto

▶ Select .

or

▶ Press the  button on the Touch Control (MBUX multimedia system).

- ❶ If Android Auto was not displayed in the foreground before disconnecting, the application starts in the background when reconnected. You can call up Android Auto using the Android Auto symbol in the status line.

■ **Calling up the Android Auto sound settings**

Multimedia system:

  ▶▶ **Settings** ▶▶ **System** ▶▶ **Audio**

▶ Select the sound settings.

■ **Ending Android Auto**

▶ Select the Android Auto symbol in the device manager (telephone, media) that is next to the device name of the mobile phone.

- ❶ Select the Android Auto symbol in the device manager if Android Auto should be restarted.
- ❷ If Android Auto was not displayed in the foreground before disconnecting, the application starts in the background the next time it is started automatically. You can call up Android Auto using the Android Auto symbol in the status line.

Transferred vehicle data with Android Auto and Apple CarPlay®

■ **Overview of transferred vehicle data**

When using Smartphone Integration, certain vehicle data is transferred to the mobile phone. This enables you to get the best out of selected mobile phone services. Vehicle data is not directly accessible.

The following system information is transmitted:

- Software release of the multimedia system

- System ID (anonymised)

The transfer of this data is used to optimise communication between the vehicle and the mobile phone.

To do this, and to assign several vehicles to the mobile phone, a vehicle identifier is randomly generated.

This has no connection to the vehicle identification number (VIN) and is deleted when the multimedia system is reset (→ page 385).

The following driving status data is transmitted:

- Transmission position engaged
- Distinction between parked, standstill, rolling and driving
- Day/night mode of the driver display
- Drive type

The transfer of this data is used to alter how content is displayed to correspond to the driving situation.

The following position data is transmitted:

- Coordinates

- Speed
- Compass direction
- Acceleration direction

This data is used by the mobile phone to improve the accuracy of the navigation (e.g. for continuity in a tunnel).

Mercedes me calls

Making a call via the overhead control panel

- i** Mercedes me calls are not possible in every country. Find out at a Mercedes-Benz service centre if these functions are available in your country.

- ① me button for service or information calls
- ② SOS button cover
- ③ SOS button (emergency call system)

Making a Mercedes me call

- ▶ Press me button ①.

Making an emergency call

- ▶ To open the cover of SOS button ②, press it briefly.
- ▶ Press and hold SOS button ③ for at least one second.

If a Mercedes me call is active, an emergency call can still be triggered. This has priority over all other active calls.

Information about the Mercedes me call using the me button

A call to the Mercedes-Benz Customer Centre has been initiated via the me button in the overhead control panel or the multimedia system (→ page 454).

Using the voice dialogue system you access the desired service:

- Accident and Breakdown Management
- Mercedes-Benz Customer Centre for general information about the vehicle

You can find information on the following topics:

- Activation of Mercedes me connect

- Operating the vehicle
- Nearest Mercedes-Benz service centre
- Other products and services from Mercedes-Benz

Data is transferred during the connection to the Mercedes-Benz Customer Centre (→ page 457).

■ Calling the Mercedes-Benz Customer Centre using the multimedia system

Requirements

- Access to a GSM network is available.
- The contract partner's GSM network coverage is available in the respective region.
- The vehicle must be switched on so that vehicle data can be transferred automatically.

Multimedia system:

▶ Call Mercedes me connect.

After confirmation, the multimedia system sends the required vehicle data. The data transfer is shown in the display.

Then you can select a service and be connected to a specialist at the Mercedes-Benz Customer Centre.

■ Calling the Mercedes-Benz Customer Centre after automatic accident or breakdown detection

Requirements:

- The vehicle has detected an accident or breakdown situation (→ page 263).
- The vehicle is stationary.
- The hazard warning lights are switched on.

 This function is not available in all countries.

The vehicle can detect accident or breakdown situations under certain circumstances.

Requirements for collision detection in the context of accident recovery:

- The vehicle is equipped with an anti-theft alarm system (ATA) (code 551).
- The vehicle is equipped with the interior protection (code 882).
- The vehicle is equipped with the Anti-Theft Protection Package (code P54).

- The collision detection service with theft notification has been activated on Mercedes me connect.

If a collision is detected when the tow-away protection is primed on a locked vehicle, you will receive a notification in the multimedia system when you switch the vehicle on.

The message informs you about the potentially affected area of the vehicle and the strength of the collision.

In the event an accident or breakdown is detected, the emergency guide shows safety notes in the multimedia system display. This may take a few seconds.

 The availability of collision detection depends on the vehicle.

After quitting the emergency guide display on the multimedia system, a prompt appears asking whether you would like to get support from the Mercedes-Benz Customer Centre.

▶ Select Call.

- After your agreement, or if the Mercedes me connect service "Accident and Break-

down Management" is active, the vehicle data is transferred automatically (→ page 459).

- The Mercedes-Benz Customer Centre takes your call and organises the breakdown and accident assistance.

You may be charged for these services.

- ① Depending on the severity of the accident, an automatic emergency call can be initiated. This has priority over all other active calls (→ page 464).
- ① In addition, if the Mercedes me connect service "Telediagnosics" is active, a similar prompt can appear after a delay in the event of a breakdown. If you are already in contact with the Mercedes-Benz Customer Centre or have already received support, this prompt can be ignored or declined.
- ① If you answer the prompt for support from the Mercedes-Benz Customer Centre with **Call later**, the message will be hidden and appear again later. The prompt triggered by the Mercedes me connect service "Telediagnosics", can either

be confirmed or declined. After being declined, this will not be shown again.

■ Arranging a service appointment via a Mercedes me call

If you have activated the maintenance management service, relevant vehicle data is transferred automatically to the Mercedes-Benz Customer Centre. You will then receive individual recommendations regarding the maintenance of your vehicle.

Regardless of whether you have consented to the maintenance management service, the multimedia system reminds you after a certain amount of time that a service is due. A prompt appears asking if you would like to make an appointment.

▶ **To arrange a service appointment:** select **Call**. After your consent, the vehicle data is transferred and the Mercedes-Benz customer centre takes your preferred appointment date. The information is then sent to your desired service outlet.

This will contact you to confirm the appointment and if necessary consult about the details.

- ① If you select **Call later** after the service message appears, the message is hidden and reappears at a later time.

■ Giving consent to data transfer during a Mercedes me call

Requirements

- There is an active Mercedes me call via the multimedia system or the me button in the overhead control panel (→ page 454).
- ① The prompt to confirm data transfer does not appear in all countries.

If the Accident and Breakdown Management services are not activated on Mercedes me, the **Do you want to transfer your vehicle data and the vehicle's position to the Mercedes-Benz Customer Centre to improve the processing of your request?** message is shown.

- ① The exact phrase may differ depending on the multimedia system installed.
- ▶ Select **Yes**.
 - The relevant vehicle data is sent automatically (→ page 457).

or

▶ Select **No** and confirm.

- Only call control data is transmitted (→ page 457).

More information on Mercedes me: <https://www.mercedes.me>

■ Data transferred during a Mercedes me call

If you initiate a service call using Mercedes me, data is transferred to enable targeted advice and an efficient service.

The following requirements must be fulfilled for the transfer of the data:

- The vehicle is switched on.
- The required data transfer technology is supported by the mobile phone network provider.
- The quality of the mobile connection is sufficient.

Multi-stage transfer depends on the following factors:

- Reason for the initiation of the call
- The available mobile phone transmission technology

- The activated Mercedes me connect services
- The service selected in the voice control system

i A prompt for consent to the data transfer only occurs if the corresponding Mercedes me connect service is not activated.

i The scope of the data transmitted depends on the vehicle model and vehicle equipment. For technical reasons, not all data is available at all times.

Data transfer if Mercedes me connect services are not activated

If no Mercedes me connect services are activated and the data protection prompt has been confirmed the following data is transmitted:

- Vehicle identification number
- Time of the call
- Reason for the initiation of the call
- Confirmation of the data protection prompt
- Country indicator of the vehicle
- Set language for the multimedia system

- Telephone number of the communication platform installed in the vehicle

If a call is made for a service appointment via the service reminder, the following data is also transmitted:

- Current mileage and maintenance data

If a call is made after automatic accident or breakdown detection using the multimedia system, the following data is also transmitted:

- Current mileage and maintenance data
- Current vehicle location

If Accident and Breakdown Management is called via the voice control system and no service has been activated, but the data protection query has been confirmed, the following data can also be called up from the vehicle by the Mercedes-Benz Customer Centre:

- Current vehicle location

If the data protection prompt has been rejected, the following data is transmitted to enable targeted advice and an efficient service:

- Reason for the initiation of the call
- Rejection of the data protection prompt
- Country indicator of the vehicle
- Set language for the multimedia system
- Telephone number of the communication platform installed in the vehicle

Data transfer if Mercedes me connect services are activated

Only if the respective service is activated will additional incident-specific data be transmitted in the second stage to enable an optimal service.

An overview of the data transferred is contained in the data protection information for the Mercedes me connect services. You can find these in your Mercedes me user account.

Data processing

The data transmitted within the scope of the call is deleted from the processing system after the call is finished, in so far as this data is not being

used for other activated Mercedes me connect services.

The incident-specific data is processed and stored in the Mercedes-Benz Customer Centre and, if required to process the incident, forwarded to the service partner authorised by the Mercedes-Benz Customer Centre. Take note of the data protection information on the Mercedes me Internet page <https://www.mercedes.me> or in the recorded message immediately after calling the Mercedes-Benz Customer Centre.

- ❗ The recorded message is not available in every country.

Mercedes me connect

Information on Mercedes me connect

- ❗ Mercedes me connect or individual Mercedes me connect services are not available in every country. Find out at a Mercedes-Benz service centre if these functions are available in your country.

Mercedes me connect consists of multiple services.

You can use the following services via the multimedia system and the overhead control panel, for example:

- Accident and Breakdown Management (me button or situation-dependent display in the multimedia system)
- Mercedes-Benz Emergency Call System (automatic emergency call and SOS button)

The Mercedes me connect Accident and Breakdown Management and the Mercedes-Benz emergency call centre are available to you around the clock.

The me button and the SOS button can be found on the vehicle's overhead control panel (→ page 454).

You can also call the Mercedes-Benz Customer Centre using the multimedia system (→ page 455).

Please note that Mercedes me connect is a Mercedes-Benz service. In emergencies, first call the national emergency services using the standard national emergency service telephone numbers. In emergencies, you can also use the

Mercedes-Benz emergency call system (→ page 49).

Please note the Mercedes me connect terms of use and the data protection information for Mercedes me connect. You can find these in your Mercedes me user account.

■ Information on Mercedes me connect Accident and Breakdown Management

❗ Accident and Breakdown Management is not available in every country. Contact a Mercedes-Benz service centre to find out whether this function is available in your country.

The Accident and Breakdown Management can include the following functions:

- Supplement to the Mercedes-Benz emergency call system (→ page 49)
If necessary, the contact person at the Mercedes-Benz emergency call centre forwards the call to Mercedes me connect Accident and Breakdown Management. Forwarding the call is however not possible in all countries.

- Breakdown assistance by a technician on location and/or the towing away of the vehicle to the nearest Mercedes-Benz service centre
You may be charged for these services.
- Addition to the emergency guide after automatic accident or breakdown detection (→ page 455)

In the event of a breakdown or accident, further vehicle data is sent which enables optimal support by the Mercedes-Benz Customer Centre and the authorised service partner or breakdown assistance.

- Addition to the Mercedes me connect service Telediagnosics
With the Telediagnosics function, specific wear and failure reports are recorded by the service provider, in so far as these can be clearly interpreted and are available through the monitoring of components that are subject to diagnostics.

If your vehicle detects a breakdown or threat of a breakdown, you may be prompted via the multimedia system to contact the Mercedes-Benz Customer Centre for further help. This

prompt in the multimedia system only appears when the vehicle is stationary.

❗ These services are subject to technical restrictions such as the mobile phone coverage, mobile network quality and the ability of the processing systems to interpret the transferred data. In some circumstances, this can result in delays or the failure of the information to appear in the multimedia system.

Please note that the service and breakdown call is a Mercedes-Benz service. In emergencies, be sure to contact the usual national emergency number first or use the Mercedes-Benz emergency call system (→ page 461).

More information about Mercedes me connect services can be obtained in the Mercedes me Portal: <https://me.secure.mercedes-benz.com>

■ Data transferred during Mercedes me connect call services

The data transferred during a Mercedes me connect call depends on:

- The reason for initiation of the call

- The service that is selected in the voice control system
- The activated Mercedes me connect services

You can find out which data is transferred when using the services in the currently valid Mercedes me connect terms of use and the data protection information for Mercedes me connect. You can find these in your Mercedes me user account.

Mercedes me Apps

Information about Mercedes me

With a Mercedes me user account you have access to Mercedes-Benz services and offers.

Availability is dependent both on the country and equipment.

You can obtain further information at a Mercedes-Benz service centre or in the Mercedes me Portal: <https://me.secure.mercedes-benz.com>

Further information about on-demand features via Mercedes me can be found in the "General notes" section (→ page 67).

- ① Make sure you always keep the Mercedes me Apps updated.

Calling up the Mercedes me user account

Multimedia system:

→  >> Apps >> Mercedes me

Vehicle is linked to user account and Mercedes me is available

- ▶ Select **Mercedes me ID**.
Information about the linked user account appears.

Your vehicle is not linked to the user account

- ① If you do not yet have a Mercedes me user account, you can create one at: <https://www.mercedes.me> or in the Mercedes me App. A valid email address or phone number is required for this.
- ▶ Select .
- ▶ Select **Apps**.
- ▶ Select **Mercedes me**.
- ▶ Follow the instructions on the display to link the user account with the vehicle.

- ① If the Mercedes me App is available on a mobile phone, the vehicle connection can be accomplished using the QR code shown.

Calling up the Mercedes me services

Requirements:

- The vehicle is connected with the user account.

Multimedia system:

→  >> Apps >> Mercedes me

- ▶ Select **My services**.
The Mercedes me connect services for which you have a valid licence are displayed in alphabetical order.

Ordering or extending Mercedes me connect services

To order or renew Mercedes me connect services, use the Store.

- ▶ Select .
- ▶ Select **Store**.

Deleting a connection between a user account and the vehicle

Requirements

- The user profile of the user account that was first linked to the vehicle is selected.
- The user profile is synchronised (→ page 369).
- A Mercedes me PIN has been set.

Multimedia system:

 →  » Apps » Mercedes me

▶ Select **Mercedes me ID**.

▶ Select **Delete vehicle connection**.

- ⓘ Only the user, whose user account was first connected with the vehicle can delete the connection between all user accounts and the vehicle.

Selecting apps

Requirements:

- Depending on the app, the general terms and conditions are confirmed.

Multimedia system:

 →  » Apps

▶ Select an app.

The following apps are available, for example:

- **Weather**
- **Browser**
- Additional apps, which are purchased or installed subsequently

ⓘ You can also access both of the first two apps via the quick access at **Apps**.

ⓘ The available features are country-dependent. Licence fees may be applicable.

The following functions are available for apps, for example:

- Search function
- Filter function, for displaying search results at the current vehicle position or at the destination
- Display of detailed information
- Read-aloud function
- Setting functions

Mercedes-Benz emergency call system

Information on available emergency call systems

Two types of emergency call system are available to you in the vehicle:

- Mercedes-Benz emergency call system
- 112 emergency call system (EU eCall)

The Mercedes-Benz Emergency Call System is not available in all countries. You can find more information on the regional availability of the Mercedes-Benz emergency call system at: <https://www.mercedes-benz-mobile.com/extra/ecall/>

The following applies for both emergency call systems:

- The transfer of specific data is required for the intended function of both emergency call systems. This will be explained in the "Data transfer" section (→ page 465).
- Both emergency call systems are included as standard equipment in your vehicle and are activated at the factory.

- The use of both emergency call systems is exempt from charges.
- Both emergency call systems only function in areas in which the mobile phone network providers offer mobile phone coverage.

For both systems, insufficient network coverage from the mobile phone network providers can result in an emergency call not being transmitted.

Differences between the Mercedes-Benz emergency call system and the 112 emergency call system (EU eCall)

Mercedes-Benz emergency call system	112 emergency call system (EU eCall)
<ul style="list-style-type: none"> • The Mercedes-Benz emergency call system is permanently logged in to the mobile phone network. • Automatic and manual Mercedes-Benz emergency calls are transmitted to a Mercedes-Benz emergency call centre. <p>In the event that the emergency call centre of the Mercedes-Benz emergency call system cannot be reached (e.g. due to a lack of network coverage), the 112 emergency call is carried out automatically.</p>	<ul style="list-style-type: none"> • If you decide on the 112 emergency call system (EU eCall) only, then the system only logs in to the mobile phone network after the triggering of a manual or automatic emergency call. • The 112 emergency call system (EU eCall) transmits automatic and manual emergency calls directly to public coordination centres.

i The 112 emergency call system (EU eCall) in your vehicle meets the delegated regulation EU 2017/79. Proper and full functionality of the 112 emergency call system (EU eCall) depends on circumstances beyond the influence of Mercedes-Benz AG. This includes

mobile network coverage and the technical infrastructure of the public reception centres in the respective countries.

i Please observe that in the event of a repair genuine Mercedes-Benz batteries must be used which have been certified pursuant to

the delegated regulation EU 2017/79 (Appendix I). Other manufacturers are also permitted provided their batteries are certified according to the delegated regulation EU 2017/79.

There is the option of deactivating the Mercedes-Benz emergency call system and using only the

112 emergency call system (EU eCall). Contact address for carrying out deactivation of the Mercedes-Benz emergency call system are the local dealers.

Mercedes-Benz recommends the activation of the Mercedes-Benz emergency call system for the following reasons:

- In emergency situations when abroad, you can also get support in a language you speak.
- Several transmission technologies are used to accelerate the transfer of the accident data and improve reliability of the transmission.
- The Mercedes-Benz emergency call system is permanently logged in to the mobile phone network, which ensures faster placement of the emergency call and faster transfer of the accident data.

Measures for rescue, recovery or towing away can then be initiated in quickly.

- With a Mercedes-Benz emergency call, the accident data is only transferred to the public coordination centre with the approval of the customer.

In the event of an automatically triggered emergency call in which there is no voice contact, the accident data is transmitted immediately to the public emergency call centre.

- If the Mercedes-Benz emergency call centre is not available, the 112 emergency call is carried out automatically.

■ Overview of emergency call systems

Both the Mercedes-Benz emergency call system as well as the 112 emergency call system (EU eCall) can help to reduce the time between an accident and the arrival of emergency services at the site of the accident. They help locate an accident site in places that are difficult to access.

Both emergency call systems can initiate an emergency call automatically (→ page 464) or manually (→ page 464).

Only make emergency calls if you or others are in need of rescue. Do not make an emergency call in the event of a breakdown or a similar situation.

Indicators in the displays

The following messages appear on the central display or the media display of both emergency call systems:

- **SOS NOT READY:** the vehicle is not switched on or the emergency call system is malfunctioning. This does not necessarily indicate complete failure of the emergency call system. Emergency calls can still be transmitted.

The display only refers to the vehicle and does not take account of the availability of mobile phone networks and the Mercedes-Benz emergency call centre.

The functional readiness of the emergency call system on the vehicle can be seen when the **SOS NOT READY** display disappears once the vehicle is switched on.

-  **SOS**: the icon appears in the display during an active emergency call.
- ⓘ If there is a malfunction of the emergency call system, the loudspeakers, microphone, airbag or the SOS button, for example, are faulty.

You can recognise a fault in the emergency call system by the following displays:

- A corresponding message will also appear in the driver display.
- The SOS button lights up red continuously.

■ Triggering an automatic emergency call

Requirements:

- The vehicle is switched on.
- The starter battery is sufficiently charged.

Both the Mercedes-Benz emergency call system as well as the 112 emergency call system (EU eCall) automatically initiate an emergency call:

- After activation of the restraint systems such as airbags or seat belt tensioners after an accident

The emergency call has been made:

- A voice connection is established with the emergency call centre.
- A message with accident data is transmitted to the emergency call centre.

The SOS button in the overhead control panel flashes until the emergency call is finished.

If no connection can be made to the public emergency services, a corresponding message appears in the display.

- ▶ Dial the emergency number 112 or the appropriate local emergency call number on your mobile phone.

If an emergency call has been initiated:

- Remain in the vehicle if the road and traffic conditions permit you to do so until a voice connection is established with the emergency call centre.
- On the basis of the call, the emergency call centre decides whether it is necessary to call rescue teams and/or the police to the accident site.
- If no vehicle occupant answers, an ambulance is sent to the vehicle immediately.

■ Triggering a manual emergency call

- ▶ **To use the SOS button in the overhead control panel:** press the SOS button at least one second long (→ page 454).

or

- ▶ **To use voice control:** use the voice commands of the MBUX voice assistant (→ page 352).

The emergency call has been made:

- A voice connection is established with an emergency call centre.
- Remain in the vehicle if the road and traffic conditions permit you to do so until a voice connection is established with the emergency call centre.
- On the basis of the call, the emergency call centre decides whether it is necessary to call rescue teams and the police to the accident site.
- A message with accident data is transmitted to the emergency call centre.

If no connection can be made to the public emergency services, a corresponding message appears in the display.

- ▶ Dial the emergency number 112 or the appropriate local emergency call number on your mobile phone.

■ Emergency call system data transfer

For both the Mercedes-Benz emergency call system as well as the 112 emergency call system (EU

eCall) data is transferred to the Mercedes-Benz emergency call centre or the public emergency services call centre.

Depending on the emergency call system (→ page 461) activated different data is transmitted to the appropriate emergency call centre.

Transmitted data according to activated emergency call system:

Mercedes-Benz emergency call	112 emergency call
<ul style="list-style-type: none"> • Position data of the vehicle • Position data on the route (a few 100 m before the incident) • Direction of travel • Vehicle identification number • Drive type of the vehicle (e.g. petrol, diesel, CNG, LPG, electric or hydrogen) • Number of people detected in the vehicle • Whether the emergency call was initiated manually or automatically • Time of the accident • Language setting on the multimedia system • Whether Mercedes me connect is available or not <p>This is a requirement for the option of forwarding the call to the Mercedes-Benz Customer Centre if necessary.</p>	<ul style="list-style-type: none"> • Position data of the vehicle • Position data on the route (a few 100 m before the incident) • Direction of travel • Vehicle identification number • Drive type of the vehicle (e.g. petrol, diesel, CNG, LPG, electric or hydrogen) • Number of people detected in the vehicle • Whether the emergency call was initiated manually or automatically • Time of the accident

- ❗ If only the 112 emergency call system (EU eCall) is activated in the vehicle, the accident data is transmitted directly to the public emergency call centre.

For accident clarification purposes, the following measures can be taken up to an hour after the emergency call has been initiated:

- The current vehicle position can be determined.
- A voice connection to the vehicle occupants can be established.
- Emergency call data can be called up.

- ❗ For Russia: various functions, e.g. receiving traffic information, cannot be performed for up to two hours after sending an emergency call.

Self-diagnosis function of the emergency call system

Your vehicle checks the functionality of the emergency call system every time the vehicle is switched on. During this time, the SOS button lights up red continuously for five seconds. In the event of a system failure, you will be informed via

a text message on the driver's display and the red **SOS NOT READY** indicator on the central display or media display.

Please, make sure, that during 30 seconds after switching vehicle ON the red indicator SOS NOT READY in the upper right corner of display is switched OFF, this means the emergency call system passed diagnostics successfully.

Starting/ending ERA-GLONASS test mode

Requirements

- The starter battery is sufficiently charged.
 - The vehicle is switched on.
 - The vehicle has been stationary for at least one minute.
- ❗ The test mode is currently available in the following countries, for example:
 - Russia
 - Belarus
 - Kazakhstan
 - Armenia
 - Kyrgyzstan

- ▶ **To start the test mode:** press and hold the  button on the multifunction steering wheel for at least five seconds.

The test mode is started and automatically ends after the language test has been performed.

- ▶ **To stop manual test mode:** switch off the vehicle. The test mode is ended.

Information on data processing

Processing of personal data via the Mercedes-Benz emergency call system

All processing of personal data via the Mercedes-Benz emergency call system corresponds with the specifications in the EU Regulation 2016/679 "on the protection of natural entities with regard to the processing of personal data (GDPR)".

The data is solely used by the Mercedes-Benz emergency call system for rescue and recovery in the event of an accident.

The owner of a vehicle, that is equipped with a Mercedes-Benz emergency call system in addition to the 112 emergency call system (EU eCall), has

the right to use the 112 emergency call system instead of the Mercedes-Benz emergency call system.

Contact address for carrying out deactivation of the Mercedes-Benz emergency call system are the local dealers.

Processing of personal data via the 112 emergency call system (EU eCall)

All processing of personal data via the 112 emergency call system (EU eCall) corresponds with the specifications in the EU Regulation 2016/679 "on the protection of natural entities with regard to the processing of personal data (GDPR)" and is based particularly on the necessity of upholding the vital interests of the affected person in accordance with article 6, paragraph 1, letter d of the GDPR.

The processing of this type of data is strictly limited to the purpose of operating the emergency calls to the standard European emergency call number 112.

Data recipient

The recipients of data that is processed by the 112 emergency call system (EU eCall) are the rel-

evant emergency call inquiry terminals. These are configured by the appropriate authorities of the respective country in which they are located to first accept and subsequently process emergency calls to the standard European emergency call number 112.

Arrangements for data processing

Both emergency call systems are designed so that the following requirements are fulfilled:

- The data contained in the system memory is not accessible outside the system prior to the initiation of an emergency call.
- Both emergency call systems cannot be traced and there is no continuous tracking in normal operation.
- The data in the system's internal memory is automatically and continuously deleted.
- The location data of the vehicle is continuously overwritten in the system's internal memory, so that no more than the last three current locations required for the normal function of the system are available.

- The record of the activity data of both emergency call systems is only kept for as long as is required to fulfil the purpose of handling the emergency call, and under no circumstances for more than 13 hours after the time that an emergency call is initiated.

Rights of persons affected by the data processing

The person affected by the data processing (the vehicle owner) has the right to access the data and if applicable can demand the correction, deletion or barring of data that affects him or her and that the processing of which does not correspond with the GDPR regulations. Each correction, deletion or barring carried out according to this regulation must be shared with the third party to which the data has been transmitted, provided this does not prove to be infeasible and does not incur disproportionate expenditure.

The person affected by the data processing has the right to complain to the appropriate data protection authority should they be of the opinion that their rights have been infringed by the processing of their personal data.

Responsible contact point for the processing of access rights: Konzernbeauftragter für den Datenschutz, Mercedes-Benz Group AG, HPC E600, D-70546 Stuttgart, Germany

Online and Internet functions

Internet connection

Information on connecting to the Internet

⚠ WARNING Risk of distraction from information systems and communications equipment

If you operate information systems and communication devices integrated in the vehicle when driving, you could be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- ▶ Only operate this equipment when the traffic situation permits.
- ▶ If you cannot be sure of this, stop the vehicle whilst paying attention to road

and traffic conditions and operate the equipment with the vehicle stationary.

You must observe the legal requirements for the country in which you are currently driving when operating the multimedia system.

⚠ WARNING Risk of accident from operating mobile communication equipment while the vehicle is in motion

Mobile communication devices distract the driver from the traffic situation. This can also cause the driver to lose control of the vehicle.

- ▶ As a driver, only operate mobile communication devices when the vehicle is stationary.
- ▶ As a vehicle occupant, use mobile communication devices only in the designated area, e.g. in the rear passenger compartment.

You must observe the legal requirements for the country in which you are currently driving when

operating mobile communication equipment in the vehicle.

Depending on the vehicle's equipment and availability in the country, you can establish an Internet connection in the following ways:

- **Vehicles with a communication module:**
 - Using the communication module including data roaming (→ page 469)
 - Using Bluetooth® or Wi-Fi with a data-enabled mobile phone
- **Vehicles without a communication module:**
 - Using Bluetooth® with a data-enabled mobile phone
 - Using Wi-Fi with a data-enabled mobile phone

The Internet functions can only be used to a limited degree whilst driving.

Setting up an Internet connection using the communication module

Requirements

- The vehicle is equipped with a permanently installed communication module.
- A Mercedes me user account is available.
- The vehicle is linked to a Mercedes me user account.
- The Entertainment Package is active.
- The Comfort Data Volume service is active.

Multimedia system:

- ➔  **Settings** **System**
- ➔ **Internet and Bluetooth**
- ➔ **Manage Internet access**
- ▶ Select **Acquired data package**.

For most Mercedes me connect services, data volume is available when purchasing the services. Additional data volume is required to use some functions, e.g. web browser or Wi-Fi hotspot. If the data volume limit is reached, the availability of Mercedes me connect services is limited.

Depending on the vehicle equipment, you can purchase a data package directly from a mobile phone network provider via the Mercedes me Store. To be able to use the data package, you conclude a separate contract with a mobile phone network provider via the Mercedes me Store, which can be terminated at any time and for which there are no costs. This contract is a prerequisite for using the services from the previously purchased package. The availability of this option is dependent on the country.

If the data package option is not available or can be upgraded, you can purchase data volume directly from the mobile phone network provider for a fee.

- ① Visit a Mercedes-Benz service centre to find out whether it is possible to purchase data volume in your country **directly from a mobile phone network provider**.
- ① Alternatively, and if available, you can utilise the tethering function of a mobile phone via Wi-Fi or Bluetooth® to use the web browser or Wi-Fi hotspot.

- ① With external Wi-Fi hotspots, which are encrypted via TKIP, online software updates cannot be carried out via the external Wi-Fi hotspot.

Disconnecting the automatic Internet connection via communication module

Requirements:

- Wi-Fi or Bluetooth® tethering are available in the vehicle.

Multimedia system:

- ➔  **Settings** **System**
- ➔ **Internet and Bluetooth**
- ➔ **Manage Internet access**

- ▶ Select the  settings in the line of **Acquired data package**.
- ▶ **To disconnect the automatic connection:** select the **Delete entry** option.
- ① The communication module is removed from the list of known hotspots, but can be reconnected manually at any time (→ page 469).

The **Delete entry** option permits the use of purchased data volume to be limited. The system is

prevented from automatically establishing a connection to the communication module after this option has been activated.

■ Setting up an Internet connection via Wi-Fi

Requirements:

- The Wi-Fi function is activated on the multimedia system (→ page 379).
- The Wi-Fi hotspot function is activated on the mobile phone (see the manufacturer's operating instructions).
- Internet access via Wi-Fi is activated (see the manufacturer's operating instructions).

Multimedia system:

→  **Settings** **» System**
» Internet and Bluetooth
» Manage Internet access

 This function is country-dependent.

The mobile phone is listed in the Internet device manager

- ▶ Select the mobile phone with the  Wi-Fi symbol.

The mobile phone is not listed in the Internet device manager

- ▶ Select **Search for access**.
- ▶ Select the mobile phone with the  Wi-Fi symbol.
It may take a few seconds until the device is found by the Wi-Fi search.
- ▶ Log in to the Wi-Fi network (→ page 379).

The Internet connection via Wi-Fi is restricted or does not function in the following cases:

- The mobile phone is switched off
- Mobile data use is deactivated on the mobile phone
- The Wi-Fi function is deactivated on the multimedia system
- The Wi-Fi function is deactivated on the mobile phone
- Internet access via Wi-Fi is deactivated on the mobile phone

■ Setting up an internet connection via Bluetooth®

Requirements:

- The mobile phone supports the Bluetooth® profile PAN (**P**ersonal **A**rea **N**etwork).
- The mobile phone is connected to the multimedia system via Bluetooth® (→ page 435).
- Internet access via Bluetooth® is activated (see the manufacturer's operating instructions).

Multimedia system:

→  **Settings** **» System**
» Internet and Bluetooth
» Manage Internet access

 This function is country-dependent.

The mobile phone is listed in the Internet device manager

- ▶ Select the mobile phone with the  Bluetooth® symbol.

The mobile phone is not listed in the Internet device manager

- ▶ Select **Search for access**.
In the list displayed, all mobile phones already known to the multimedia system are shown. New devices can be set up using the phone application.
- ▶ Connect the mobile phone using Bluetooth® (→ page 435).
- ⓘ If a new mobile phone is connected using Bluetooth®, this is also used for the telephone application.

The Internet connection via Bluetooth® is restricted or does not function in the following cases:

- The mobile phone is switched off
- The mobile phone network coverage is insufficient
- Mobile data use is deactivated on the mobile phone
- The Bluetooth® function on the multimedia system is switched off and the mobile phone is to be connected via Bluetooth®

- The Bluetooth® function is switched off on the mobile phone and the mobile phone is to be connected via Bluetooth®
- Neither the mobile phone network nor the mobile phone allow simultaneous use of a telephone and an Internet connection
- The mobile phone has not been enabled for Internet access via Bluetooth®

■ Cancelling Internet access permission for a mobile phone

Multimedia system:

- ↳  ▶▶ Settings ▶▶ System
- ▶▶ Internet and Bluetooth
- ▶▶ Manage Internet access

- ▶ Select options  next to the name of the mobile phone.
- ▶ Select **Delete configuration**.
- ▶ Select **Yes**.

■ Establishing an Internet connection

Multimedia system:

- ↳  ▶▶ Apps

- ▶ For example, select  **Browser**.

If you select a function that requires an Internet connection and the system is currently offline, a menu opens with a selection of possible Internet accesses as well as all tethering devices that are within range.

- ▶ Select an Internet access from the list.
The Internet connection is established.
- ⓘ The list of possible Internet connections can also be displayed using the extended status line.
- ⓘ Depending on the vehicle equipment and country availability, you can establish an Internet connection via the communication module or connected mobile phones.
- ⓘ The availability of the web browser depends on the country.

Connection status

Connection status overview

Depending on the connection status, the following symbols can appear on the media display in the status line:

- : a WLAN device is selected as Internet access.
- : a Bluetooth® device is selected as Internet access.
- Mobile communications standard (e.g. 4G + double arrow symbol): the communication module is selected as the hotspot.

Displaying the connection status

Multimedia system:

- ▶ Briefly press the status line.
The extended status line is displayed.
- ▶ Briefly press the Internet symbol in the symbol overview.
The current connection status is displayed.

Notes on displaying the connection status

- When connecting via Wi-Fi, the connection status and device name are displayed.
- When connecting via a Bluetooth® device, the connection status, device name, and network type are displayed.
- In the case of a connection via the communication module the following status information can be shown:
 - Type of network
 - Status (online, offline, data volumes available or used, limited service)
- For vehicles with a communication module, the connection data of non-user paid services can be displayed via [Mercedes me connect](#).

Web browsers

Calling up a web page

⚠ WARNING Risk of distraction from information systems and communications equipment

If you operate information systems and communication devices integrated in the vehicle when driving, you could be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- ▶ Only operate this equipment when the traffic situation permits.
- ▶ If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

You must observe the legal requirements for the country in which you are currently driving when operating the multimedia system.

Selecting and connecting to Tuneln radio stations

Multimedia system:

- ▶ Select .
 - ▶ Select a category.
 - ▶ Select a station.
The connection is established automatically.
- or

- ▶ Select the search field.
- ▶ Enter a station name.

- A relatively large volume of data can be transmitted when using Internet Radio.

Saving/deleting a Tuneln radio station as a favourite

Multimedia system:

Saving favourites

- ▶ Select a station.
- ▶ Press the symbol next to the station name.

Deleting favourites

- ▶ Select a station.
- ▶ Press the symbol next to the station name.

Setting Internet Radio options

Multimedia system:

The following options are available:

- **Select Stream:** select the stream quality
- **Login to Tuneln Account:** log in to your Tuneln user account
- **Log Out of Account:** log out of your Tuneln user account

- ▶ Select an option.

Media

Information about media mode

Information about supported formats and data storage media

WARNING Risk of distraction when handling data storage media

If you handle a data storage medium while driving, your attention is diverted from the traffic conditions. This could also cause you to lose control of the vehicle.

- ▶ Only handle a data storage medium when the vehicle is stationary.

Supported formats and data storage media:

Permissible file systems	FAT32, exFAT, NTFS
Permissible data storage media	USB devices, iPod®/iPhone®, MTP devices, Bluetooth® audio devices
Supported audio formats	MP3, WMA, AAC, WAV, FLAC, ALAC
Supported video formats	MPEG, AVI, MKV, MP4, M4V, WMV

i Observe the following notes:

- The multimedia system supports a total of up to 50,000 files.
- Data storage media up to 2 TB are supported (32-bit address space).
- Due to the large variety of available music and video files regarding encoders, sampling frequency and data transfer rates, playback cannot be guaranteed.

- Due to the wide range of USB devices available on the market, playback cannot be guaranteed for all USB devices.
- Videos up to FullHD (1920x1080) are supported.
- Copy-protected music and video files or DRM (Digital Rights Management) encrypted files cannot be played back.
- MP3 players must support Media Transfer Protocol (MTP).

Information on copyright protection and trademarks

Audio files which you create yourself (e.g. copies of data storage media you make yourself) are generally subject to copyright protection. In many countries, reproductions are not permitted without the prior consent of the copyright holder, even for private use. Make sure that you know about the applicable copyright regulations and that you comply with these.

Connecting the data storage medium to the multimedia system

Connecting USB devices

! **NOTE** Damage caused by high temperatures

High temperatures can damage USB devices.

- ▶ Remove the USB device after use and take it out of the vehicle.

- ▶ Connect the USB device to the USB port.

Searching for and authorising a Bluetooth® audio device

Requirements:

- Bluetooth® is activated on the multimedia system and audio equipment.
- The audio equipment supports the Bluetooth® audio profiles A2DP and AVRCP.

- The audio equipment is "visible" for other devices.

Multimedia system:

▶ ▶ ▶ **Media** ▶▶ **Bluetooth**

Authorising a new Bluetooth® audio device

- ▶ Select **Connect device**.
Detected equipment is displayed in the device list.
- ▶ Select an audio device.
Authorisation starts. A code is displayed on the multimedia system and on the mobile phone.
- ▶ If the codes are identical, confirm on the audio equipment.
- ▶ Select **No, only music**.
The Bluetooth® audio equipment is connected with the multimedia system.

Connecting previously authorised Bluetooth® audio equipment

- ▶ Select a Bluetooth® audio device from the list.
The connection is being established.

Starting media playback

Requirements:

- A data storage medium is connected to the multimedia system.

Multimedia system:

 **Media**

- ▶ Select a media source.

Controlling media playback

Multimedia system:

 **Media**

- ▶ To pause playback: select .
- ▶ To continue playback: select .
- ▶ To repeat a track: select .

For the repeat function there are the following settings:

- **Select once:** the active playlist is repeated.
- **Select twice:** the current track is repeated.

- **Select three times:** the repeat function is deactivated.

- ▶ To play back tracks in random order: select .
- ▶ To rewind or fast-forward a track: tap on the desired point on the timeline.
- ▶ To select the next track: select .
- ▶ To select the previous track: select .
- ▶ To scroll through tracks quickly: press and hold  or .
- ▶ To show the current track list: select .

Additional options for setting media playback

Multimedia system:

 **Media**

Calling up additional options

- ▶ Select .
- ▶ The additional options are shown.
- ▶ Select an option.

Media search

Notes about the search function in categories

Under  you can search through all available media files. There are several categories available for selection. The categories shown depend on the connected device and data format.

- ⓘ The categories are available as soon as the entire media content has been read in and analysed. Availability of the media search with Android devices may be limited.

Starting a search in categories

Multimedia system:

 **Media** 

- ▶ Select a category.

Using the keyword search

Multimedia system:

 **Media**

You can look for content using the keyword search with free text input.

- ▶ Select . A keyboard for character entry appears.
- ▶ Enter the term searched for.
- ① The search begins with the first character entered. The more characters entered the more concrete the search results become.
- ▶ Select the desired entry from the result list. If a list with several tracks is selected, then this is opened in the search.
To playback all of the tracks in the list, select  and then **Play now**.

Music online

Requirements

- There is an account for the music streaming service.
- A subscription for the music streaming service has been obtained.
- The data volume is available.
Depending on the country, data volume may need to be purchased.

- A fast Internet connection for data transmission free of interference.
- ① The functions and services are country-dependent. For more information, consult a Mercedes-Benz service centre.

Multimedia system:

  **Media**

Adding a streaming provider the first time you start the application

- ▶ Select **Online music**.
The overview of all supported streaming providers appears.
- ▶ Select a streaming provider.
A QR code is shown on the display.
- ▶ Scan the QR code with the mobile phone.
- ▶ Confirm the connection request on the mobile phone.

Adding more streaming providers

- ▶ Select **Online music**.
The last active streaming provider is active.
- ▶ Select .

- ▶ Select **Music services**.
The overview of all supported streaming providers appears.
- ▶ Select a streaming provider.
A QR code is shown on the display.
- ▶ Scan the QR code with the mobile phone.
- ▶ Confirm the connection request on the mobile phone.

Logging out from a streaming provider

- ▶ Select **Online music**.
The last active streaming provider is active.
- ▶ Select .
- ▶ Select **Music services**.
The overview of all supported streaming providers appears.
- ▶ Tap on **Log out**.

Calling up music online

Multimedia system:

  **Media**

- ▶ Select **Online music**.

Music playback can be controlled with the Touch Control or by using the media application.

■ Searching for music in online music

Multimedia system:

→ **Media** → **Online music**

Searching for categories in online music

The media content of the streaming provider can be scanned through in the category search. The available categories and the symbol for the category search depend on the streaming provider.

- ▶ Start the category search.
The list of available categories appears.
- ▶ Select a category.

Keyword search in online music

You can look for content using the keyword search with free text input.

- ▶ Select .
- ▶ A keyboard for character entry appears.
- ▶ Enter the term searched for.

- ❗ The more characters entered when using the keyword search, the more concrete the search results are.

- ▶ Select the desired entry from the result list. Depending on the selected hit, playback is started or a lower level in the search is opened.

■ Calling up online music settings

Multimedia system:

→ **Media** → **Online music**

- ▶ Select .
- ▶ Select **Music services**.
- ▶ Select next to a streaming provider.
- ▶ Select a setting.

■ Information about Dolby Atmos®

The MBUX multimedia system enables playback of Dolby Atmos® content via the Burmester® sound system, thereby providing an even more immersive three-dimensional sound experience.

- ❗ The function is available with Apple Music® streaming or by using a USB device with the corresponding file formats.

- ❗ The availability of this function is equipment-dependent.

■ Switching Dolby Atmos® on or off

Requirements:

- An account for the Apple Music® music streaming service is available.
- A subscription for the Apple Music® music streaming service has been obtained.
- Sufficient data volume is available.
Depending on the country, data volume may need to be purchased.
- A fast Internet connection for data transmission free of interference.

- ❗ The functions and services are country-dependent. For more information, consult a Mercedes-Benz service centre.

Multimedia system:

→ **Media**

- ▶ Select **Online music**.
The overview of all supported streaming providers appears.

- ▶ Select **Apple Music®**.
- ▶ Select .
- ▶ Tap  to switch on **Dolby Atmos®**.

or

- ▶ Tap  to switch off **Dolby Atmos®**. Tracks which are present or available in Dolby Atmos® will be played appropriately by the sound system using this format.

Radio

Switching on the radio

Multimedia system:

- ▶ Start the application on the multimedia system home screen. The radio menu appears. You will hear the last station played on the last frequency band selected.

Radio overview

- ① Preview image
- ② Active frequency band
- ③ Station name, set frequency and additional information on the station
- ④ Previous or next station
- ⑤ Settings
- ⑥ Sound settings
- ⑦ Switches on traffic reports
- ⑧ Station list
- ⑨ Search

- ⑦ Switches on traffic reports
- ⑧ Station list
- ⑨ Search

Setting the frequency band

Multimedia system:

- ▶ Select a frequency band or a favourite.

Selecting a radio station

Multimedia system:

- ▶ Swipe to the left or right on the control element or select a radio station.

Calling up the radio station list

Multimedia system:

- ▶ Select .
- The station list appears.

- ▶ Swipe the station list up or down.
- ▶ Select a station.

Searching for radio stations using station names or frequency entry

Multimedia system:

- ▶ Select .
- ▶ Enter a station name or frequency.
- ▶ Select a station.

Selecting a recommended radio station

Requirements:

- The multimedia system has gathered sufficient data in order to show station suggestions.

Multimedia system:

- ▶ Select .
- ▶ The recommended stations are shown.

- ▶ Select a suggested station.
The selected station is played.

Storing radio stations

Multimedia system:

- ▶ Select a radio station.
- ▶ Select .

Managing favourites

Multimedia system:

Moving stations

- ▶ Press .
- ▶ The list of favourites appears.
- ▶ Press  to the far right of the station name.
- ▶ Select **Move**.
- ▶ Move the station to the new position.

Setting station tracking via Internet radio

Requirements

- A fast Internet connection for data transmission free of interference.

Multimedia system:

- ▶ Select .
 - ▶ Select **Internet radio**.
 - ▶ Activate or deactivate the **Service Following** function.
- When the function is on, the station is searched for via Internet Radio.

If you are driving out of the station's coverage area and the station is available via Internet radio, the **Poor reception. Tap here to switch to Internet radio.** message appears on the central display.

Calling up a slide show (FM/DAB radio mode)

Multimedia system:

The slide show displays additional information provided by the station as an image. This can include logos, album covers, music tracks, programmes, news or service information, for example.

i The slide show is available for DAB+ channels that broadcast additional information.

- ▶ Press the station picture on the central display.
The image is enlarged.

Switching a slideshow on or off (FM/DAB radio mode)

Multimedia system:

- ▶ Switch **DAB Slideshow** or **Expanded Radio Slideshow** on or off .
- When both slideshows are switched on, the contents of both slideshows alternate.

Activating/deactivating the frequency fix function

Multimedia system:

- ▶ Activate or deactivate **Frequency fix**.
If the function is activated, the set frequency is kept even if the reception is poor.

Activating/deactivating traffic announcements

Multimedia system:

- ▶ Select **Radio announcements**.
The traffic information service is switched on or off.

Activating/deactivating radio announcements

Multimedia system:

- ▶ Switch on **Radio announcements**.
The selected radio announcements are played.

When **Radio announcements** are first switched on, **Traffic information service (TA)**, **Travel** and **Warning** are preset.

or

- ▶ Switch off **Radio announcements**.
No radio announcements are played.

Selecting radio announcements

Multimedia system:

- ▶ Switch an announcement on or off.
- For example, **Traffic information service (TA)**, **Travel** or **Warning** can be selected.
- i** The radio announcements are not station-dependent.

Setting the traffic information service volume increase

Multimedia system:

-     System  Audio
- ▶ Select **Navigation & traffic announcements**.
 - ▶ Set a value for **Traffic announc. vol. increase**.

Displaying radio text

Multimedia system:

-    Radio 
- ▶▶ **Active frequency band**
 - ▶ Activate or deactivate **Radio text information**.

Showing or hiding lyrics

- ⓘ The function is equipment-dependent.

Multimedia system:

Showing lyrics

- ▶ Select **Show lyrics**.
The lyrics, album cover, title and artist of the song currently playing on the radio are displayed.
Swipe up or down to go to the bottom or top section of the lyrics.
If no lyrics are available for the song currently playing on the radio, **Show lyrics** is greyed out.

Hiding lyrics

- ▶ Select the cross at the top of the lyrics display.

or

- ▶ Select .
The radio menu appears.

Sound

Sound settings

Information about the sound system

The sound system has a total output of 100 W and is equipped with six speakers. It is available for all functions in the radio and media modes.

- ⓘ The call can also be made from other audio sources. Replace Media with, for example, Radio in the menu path.

Calling up the sound menu

Multimedia system:

- ▶ Select one of the functions shown to make settings.

Adjusting treble, mid-range and bass settings

Multimedia system:

- ▶ Set **Treble, Mid or Bass**.

Switching loudness normalisation on or off

Multimedia system:

▶▶ Loudness normalisation

The function compensates for differing loudness when changing between audio sources and within an audio source. Several levels are available for this purpose. The currently set level is displayed.

The loudness normalisation can also be switched off.

▶ Switch on one level.

or

▶ Switch off the loudness normalisation.

Setting the balance and fader

Multimedia system:

▶▶ Balance and Fader

Adjusting the balance

- ▶ In the grid shown, move the volume distribution between the right and left speakers in the vehicle.
The volume is distributed between the right and left-hand speakers.

Adjusting the fader

- ▶ In the grid shown, move the volume distribution between the front and rear speakers in the vehicle.
The volume is distributed between the front and rear speakers.

Burmester® surround sound system

Information about the Burmester® surround sound system

The Burmester® surround sound system has a total output of 590 W and is equipped with 12 speakers. It is available for all functions in the radio and media modes.

- ⓘ The call can also be made from other audio sources. Replace Media with, for example, Radio in the menu path.

Calling up the sound menu in the Burmester® surround sound system

Multimedia system:

- ▶ Select one of the functions shown to make settings.

Adjusting the treble, mid and bass settings on the Burmester® surround sound system

Multimedia system:

- ▶ Set Treble, Mid or Bass.

Switching loudness normalisation in the Burmester® surround sound system on or off

Multimedia system:

The function compensates for differing loudness when changing between audio sources and within an audio source. Several levels are available for this purpose. The currently set level is displayed.

Switch off loudness normalisation as follows:

- ▶ Switch on one level.
- or

- ▶ Switch off the loudness normalisation.

Adjusting the balance and fader in the Burmester® surround sound system

Multimedia system:

Adjusting the balance

- ▶ Move the volume distribution between the right and left sides of the vehicle in the grid shown.
The volume is distributed between the speakers on the left and right sides in the vehicle.

Adjusting the fader

- ▶ Move the volume distribution between the front and rear of the vehicle in the grid shown.
The volume is distributed between the speakers in the front and rear of the vehicle.
- ⓘ Setting 0 is recommended for high quality music and voice reproduction.

Selecting a sound profile in the Burmester® surround sound system

Multimedia system:

Setting an existing sound profile

- ▶ Select a sound profile.

Setting up a personal sound profile

- ▶ Select **Personal sound profile** and .
- ▶ Select **Reconfigure**.
- ▶ Restart the set-up assistant.

Setting up a personal sound profile for the first time:

- ▶ Select **Personal sound profile**.
- ▶ Open the set-up assistant with **Start**.
- ▶ Observe the messages on the display and select the preferred settings.
The personal sound profile is created with the selected settings and can be selected in the **Sound profiles** menu.

Changing individual settings of the personal sound profile at a later date:

- ▶ Select **Personal sound profile** and .
- ▶ Make the required adjustments.
- ⓘ The availability of a **Personal sound profile** is dependent on the equipment.
The set-up assistant is available when the vehicle is stationary.

Adjusting the sound focus in the Burmester® surround sound system

Multimedia system:

 ▶▶ **Media** ▶▶  ▶▶ **Sound focus**

- ▶ Select a seat or row of seats for the sound focus.
The sound focus is activated.
- or
- ▶ Select the seat or row of seats again.
The sound focus is deactivated.

Advanced sound system

Information about the Advanced sound system

The Advanced sound system has a total output of 225 W and is equipped with ten speakers. It is available for all functions in the radio and media modes.

- ⓘ The call can also be made from other audio sources. Replace Media with, for example, Radio in the menu path.

Calling up the sound menu in the Advanced sound system

Multimedia system:

 ▶▶ **Media** ▶▶ 

Adjusting sound settings

- ▶ Select one of the functions shown.

Adjusting treble, mid-range and bass settings in the Advanced sound system

Multimedia system:

 ▶▶ **Media** ▶▶ 

- ▶ Set **Treble**, **Mid** or **Bass**.

Switching loudness normalisation in the Advanced sound system on or off

Multimedia system:

 ▶▶ **Media** ▶▶  ▶▶ **Equaliser**
▶▶ **Loudness normalisation**

Switching off loudness normalisation

- ▶ Switch on one level.
- or

- ▶ Switch off loudness normalisation.

Setting the balance/fader in the Advanced sound system

Multimedia system:

 ▶▶ **Media** ▶▶ 
▶▶ **Balance and Fader**

Adjusting the balance

- ▶ Move the volume distribution between the right and left sides of the vehicle in the grid shown.
The volume is distributed between the speakers on the left and right sides in the vehicle.

Adjusting the fader

- ▶ Move the volume distribution between the front and rear of the vehicle in the grid shown. The volume is distributed between the speakers in the front and rear of the vehicle.

Sound Experience

Information about Sound Experience

Your journey will be an acoustic experience. For this purpose, the active Sound Experience accompanies certain situations in the vehicle with selected sounds.

In the vehicle interior, for example, the following situations are accompanied by selected sounds:

- Arrival in the vehicle
- Starting the drive system
- Vehicle acceleration
- Recovery of energy from the braking procedure
- Exiting the vehicle

In the exterior area, for example, the following situations are accompanied by selected sounds:

- Locking and unlocking your vehicle
- Plugging in and unplugging the vehicle plug
The sound when disconnecting the vehicle plug varies with the state of charge of your vehicle.
- Unlocking the vehicle plug
- Successful initiation of the charging process
- Malfunction when charging

In addition, your vehicle welcomes you with an ambient sound outside when the vehicle is stationary and unlocked.

- ⓘ The availability of the exterior area sounds is dependent on the country.

Calling up Sound Experience

Multimedia system:

- ▶  ▶ Settings ▶ Vehicle ▶ Driving ▶ Sound Experience

Switching Sound Experience on or off

- ▶ Switch [Sound Experience inside](#) or [Sound Experience outside](#) on or off.

- ⓘ The availability of the Sound Experience outside is country-dependent.

Selecting Sound Experience style

- ▶ Select a style.

Styles are already available, for example [Vivid Flux](#).

You can purchase additional styles through the Mercedes me Portal.

- ⓘ The availability of styles that can be purchased is country-dependent.

ASSYST PLUS service interval display

Function of the ASSYST PLUS service interval display

The ASSYST PLUS service interval display on the driver's display informs you of the next regular service due date.

Depending on the operating conditions of the vehicle, the remaining time or distance until the next service due date will be displayed.

You can hide this service display using the back button  on the steering wheel.

You can obtain information concerning the servicing of your vehicle from a qualified specialist workshop, e.g. a Mercedes-Benz service centre (→ page 79).

Displaying the service due date

Driver display:

The next service due date is displayed.

- ▶ **To exit the display:** press the back button  on the steering wheel.

Information on regular maintenance work

- ! **NOTE** Premature wear through failure to observe service due dates

Maintenance work which is not carried out at the right time or incompletely can lead to increased wear and damage to the vehicle.

- ▶ Adhere to the prescribed service intervals.
- ▶ Always have the prescribed maintenance work carried out at a qualified specialist workshop.

- ! **NOTE** Irreparable damage to the high-voltage battery due to maintenance work not being carried out

The high-voltage battery is subject to wear. Maintenance work which is not carried out in time can lead to irreparable damage to the high-voltage battery.

- ▶ Always observe the warning messages about the high-voltage battery and immediately consult a qualified specialist workshop.
- ▶ Have the necessary maintenance work on the high-voltage battery carried out at a qualified specialist workshop.

Notes on special service requirements

The prescribed service interval is based on normal operation of the vehicle. Have the maintenance work carried out more often than prescribed if operating conditions are difficult or the vehicle is subject to increased stress. This is the case for frequent operation in mountainous terrain or on poor road surfaces, for example.

In these or similar operating conditions, have the interior air filter changed more frequently. Check the tyres more frequently if the vehicle is operated under increased stress. Further information can be obtained at a qualified specialist workshop.

The ASSYST PLUS service interval display is only an aid. It is the responsibility of the driver of the vehicle to have maintenance work carried out more often than prescribed due to actual operating conditions and/or stresses.

Battery disconnection periods

The ASSYST PLUS service interval display can calculate the service due date only when the battery is connected.

- ▶ Display and note down the service due date on the driver display before disconnecting the battery (→ page 492).

Maintenance Management

Notes about Maintenance Management

If the Maintenance Management service is activated, relevant data is automatically transferred to the Mercedes-Benz customer centre.

The customer centre transmits the data to the service partner that you have entered on the Mercedes me website at: <http://www.mercedes.me>.

www.mercedes.me. You will then receive individual recommendations regarding the maintenance of your vehicle.

- ❶ The calculation of the optimal transmission time of the maintenance request to the service partner is subject to technical limitations that may cause the maintenance recommendation to be perceived as too early or too late or not to be made at all. In this case, you can conveniently arrange a maintenance appointment with the customer centre via the maintenance reminder in the multimedia system.
- ❷ Maintenance Management and the maintenance reminder in the multimedia system are not available in every country. Contact a Mercedes-Benz service centre to find out whether this function is available in your country.

Data transferred when using Maintenance Management

When the service is activated, relevant data is automatically transferred to determine the

required scope of maintenance as well as fault detection and fault rectification.

Details on data transfer can be found in the data protection information for the Mercedes me connect services. These can be found at: <https://www.mercedes.me> under "My Mercedes me account", "Terms of use".

- ❶ Maintenance Management and the maintenance reminder in the multimedia system are not available in every country.

Telediagnosics

Notes about Telediagnosics

- ❶ This service is not available in all countries. The vehicle can detect if certain wear parts need to be replaced or if malfunctions have occurred in vehicle systems. If the Telediagnosics service is activated, relevant data is automatically transmitted to the manufacturer. If fault conditions are detected by the vehicle system self-diagnosis, the system transmits recommendations for action to the Mercedes-Benz customer centre depending on the fault detected. The customer centre trans-

mits the data to the service partner that you have entered on the Mercedes me website at: <http://www.mercedes.me>.

For selected faults, the notification that a malfunction has been detected may appear in the multimedia system with a request to contact the Mercedes-Benz Customer Centre. From this message, a call can be made directly to the customer centre for assistance.

-  The transmission of a notification to the multimedia system depends on the country, vehicle model and equipment and requires a fast data connection, over which the service provider has no influence.
-  Reliable fault detection is subject to technical limitations. Therefore, only a limited selection of faults can be detected and recommendations for action transmitted to the customer centre and the service partners. Mercedes-Benz AG is continuously working on the expansion of this service. The fault detection depends on the country, vehicle model and equipment.

Data transferred when using Telediagnos

When the service is activated, relevant data is automatically transferred to determine the required scope of maintenance as well as fault detection and fault rectification.

Details on data transfer can be found in the data protection information for the Mercedes me connect services. These can be found at: <https://www.mercedes.me> under "My Mercedes me account", "Terms of use".

-  The scope of the transmitted data depends on the vehicle model and its equipment. For technical reasons, not all data is available at all times.

Engine compartment

Active bonnet (pedestrian protection)

■ Operation of the active bonnet (pedestrian protection)

In certain accident situations, the actuation of the active bonnet reduces the risk of injury to pedes-

trians. The rear area of the bonnet is raised by approximately 70 mm.

For the drive to the workshop, reset the actuated active bonnet yourself (→ page 494).

After the active bonnet has been actuated, pedestrian protection may be limited.

Have the full functionality of the active bonnet restored in a qualified specialist workshop.

■ Resetting the active bonnet

 **WARNING** Risk of burns from hot components in the engine compartment

Certain components in the engine compartment can be very hot, e.g. the drive system and the cooler.

-  Allow the drive system to cool down and touch only the components described below.

- ▶ With your hand flat, push down active bonnet ① in the area around the hinges on both sides (arrows). In doing so, the actuator is depressurised and you may hear a hissing sound. The engine bonnet must engage in position.
- ▶ If active bonnet ① can be raised slightly at the rear in the area of the hinges, repeat the step until it engages correctly.

Opening and closing the bonnet

- ⚠ **DANGER** Risk of fatal injuries when carrying out maintenance work during the charging process

During the charging process, the high-voltage on-board electrical system is under high voltage.

- ▶ Do not perform any maintenance work during the charging process.

- ⚠ **WARNING** Risk of accident due to driving with the bonnet unlocked

The bonnet may open and block your view.

- ▶ Never release the bonnet when driving.
- ▶ Before every trip, ensure that the engine bonnet is locked.

- ⚠ **WARNING** Risk of accident and injury when opening and closing the bonnet

The bonnet may suddenly drop into the end position.

There is a risk of injury for anyone in the engine bonnet's range of movement.

- ▶ Do not open or close the bonnet if there is a person in the bonnet's range of movement.

- ⚠ **WARNING** Risk of injury due to overheated vehicle

If you open the bonnet in the event of an overheated vehicle or fire in the engine compartment, the following situations may occur:

- You may come into contact with hot gases.
- You may come into contact with other escaping hot operating fluids.
- ▶ In the event of overheating or fire in the engine compartment, keep the bonnet closed and call the fire service.
- ▶ Allow the overheated vehicle to cool down first if you need to open the bonnet.

⚠ WARNING Risk of injury due to moving parts

Components in the engine compartment may continue to run or start unexpectedly even when the drive system is switched off.

Observe the following if you must open the bonnet:

- ▶ Switch off the vehicle.
- ▶ Never touch the danger zones surrounding moving components, e.g. the rotation area of the fan.
- ▶ Remove jewellery and watches.
- ▶ Keep items of clothing and hair away from moving parts.

⚠ WARNING Risk of burns from hot components in the engine compartment

Certain components in the engine compartment can be very hot, e.g. the drive system and the cooler.

- ▶ Allow the drive system to cool down and touch only the components described below.

⚠ WARNING Risk of injury from using the windscreen wipers when the bonnet is open

If the windscreen wipers start moving when the bonnet is open, you could be trapped by the wiper linkage.

- ▶ Always switch off the windscreen wipers and the vehicle first if you need to open the bonnet.

Opening the bonnet

- ▶ To release the bonnet, pull on handle ①.

- ▶ Push yellow handle ① on the bonnet catch to the left as far as it will go (palm downwards). Lift the bonnet until it is automatically raised by the pneumatic spring.

Closing the bonnet

- ▶ Lower the bonnet and let it drop from a height of approximately 20 cm.

- ▶ If the bonnet can still be lifted slightly, open the bonnet again and close it with a little force until it engages correctly.

Checking the coolant level

- ⚠ **DANGER** Risk of fatal injuries when carrying out maintenance work during the charging process

During the charging process, the high-voltage on-board electrical system is under high voltage.

- ▶ Do not perform any maintenance work during the charging process.

- ⚠ **WARNING** Risk of injury due to overheated vehicle

If you open the bonnet in the event of an overheated vehicle or fire in the engine compartment, the following situations may occur:

- You may come into contact with hot gases.

- You may come into contact with other escaping hot operating fluids.
- ▶ In the event of overheating or fire in the engine compartment, keep the bonnet closed and call the fire service.
- ▶ Allow the overheated vehicle to cool down first if you need to open the bonnet.

- ⚠ **WARNING** Risk of injury due to moving parts

Components in the engine compartment may continue to run or start unexpectedly even when the drive system is switched off.

Observe the following if you must open the bonnet:

- ▶ Switch off the vehicle.
- ▶ Never touch the danger zones surrounding moving components, e.g. the rotation area of the fan.
- ▶ Remove jewellery and watches.

- ▶ Keep items of clothing and hair away from moving parts.

⚠ WARNING Risk of scalding from hot coolant

You may scald yourself if you open the cap when the drive system is at normal operating temperature.

- ▶ Allow the engine to cool down before opening the cap.
- ▶ When opening the cap, wear protective gloves and safety glasses.
- ▶ Open the cap slowly to release pressure.

- ▶ Have the coolant checked or refilled only at a qualified specialist workshop.

Topping up the windscreen washer system

⚠ DANGER Risk of fatal injuries when carrying out maintenance work during the charging process

During the charging process, the high-voltage on-board electrical system is under high voltage.

- ▶ Do not perform any maintenance work during the charging process.

⚠ WARNING Risk of injury due to overheated vehicle

If you open the bonnet in the event of an overheated vehicle or fire in the engine compartment, the following situations may occur:

- You may come into contact with hot gases.
 - You may come into contact with other escaping hot operating fluids.
- ▶ In the event of overheating or fire in the engine compartment, keep the bonnet closed and call the fire service.

- ▶ Allow the overheated vehicle to cool down first if you need to open the bonnet.

⚠ WARNING Risk of injury due to moving parts

Components in the engine compartment may continue to run or start unexpectedly even when the drive system is switched off.

Observe the following if you must open the bonnet:

- ▶ Switch off the vehicle.
- ▶ Never touch the danger zones surrounding moving components, e.g. the rotation area of the fan.
- ▶ Remove jewellery and watches.
- ▶ Keep items of clothing and hair away from moving parts.

⚠ WARNING Risk of burns from hot components in the engine compartment

Certain components in the engine compartment can be very hot, e.g. the drive system and the cooler.

- ▶ Allow the drive system to cool down and touch only the components described below.

⚠ WARNING Risk of fire and injury from windscreen washer concentrate

Windscreen washer concentrate is highly flammable.

- ▶ Avoid fire, naked flames, smoking and the creation of sparks when using windscreen washer concentrate.

- ▶ Remove cap ① by the tab.
- ▶ Top up the washer fluid.

Keeping the air/water duct free

- ▶ Keep the area between the bonnet and the windscreen free of deposits, e.g. ice, snow or leaves.

Cleaning and care

Information on washing the vehicle in a car wash

⚠ WARNING Risk of an accident due to reduced braking power after washing the vehicle

Braking efficiency is reduced after washing the vehicle.

- ▶ After the vehicle has been washed, brake carefully while paying attention to the traffic conditions until braking power has been fully restored.

! NOTE Damage from automatic braking

If one of the following functions is activated, the vehicle will brake automatically in certain situations:

- Active Brake Assist
- Active Distance Assist DISTRONIC
- HOLD function
- Active Parking Assist

To avoid damaging the vehicle, deactivate these systems e.g. during towing or in the car wash.

! **NOTE** Damage due to unsuitable car wash

- ▶ Before driving into a car wash make sure that the car wash is suitable for the vehicle dimensions.
- ▶ Ensure there is sufficient ground clearance between the underbody and the guide rails of the car wash.
- ▶ Ensure that the clearance width of the car wash, in particular the width of the guide rails, is sufficient.

To avoid damage to your vehicle when using a car wash, ensure the following beforehand:

- Active Distance Assist DISTRONIC is deactivated.
- the HOLD function is switched off.
- the 360° Camera or the reversing camera is switched off.

- the side windows and sliding sunroof are completely closed.
- the blower for the ventilation and heating is switched off.
- the windscreen wiper switch is in position **0**.
- the key is at a minimum distance of 3 m away from the vehicle. Otherwise the tailgate could open unintentionally.
- for car washes with a conveyor system:
 - neutral **N** is engaged.
 - If you would like to leave the vehicle while it is being washed, make sure the key is located in the vehicle. The park position **P** is otherwise automatically engaged.

i If, after the car wash, you remove the wax from the windscreen and wiper rubbers, this will prevent smearing and reduce wiper noise.

Car wash mode

In car wash mode, the vehicle is prepared for driving into an automatic car wash. Car wash mode

can be activated up to a speed of 20 km/h (→ page 501).

The following settings will be adjusted when car wash mode is activated:

- The outside mirrors will be folded in.
- To prevent the windscreen washer system from starting up automatically, the rain sensor will be deactivated.
- The rear window wiper will be deactivated.
- The windows and the sliding sunroof will be closed.
- Air-recirculation mode will be activated.
- Parking Assist PARKTRONIC will be deactivated.
- **Vehicles with 360° camera:** the front image will be activated after approximately eight seconds.

If one of the settings cannot be selected, this is displayed by a **X** behind the respective setting.

Car wash mode will automatically be deactivated above a speed of 20 km/h.

The following settings will be reset when car wash mode is deactivated:

- The outside mirrors will be folded out.
- The rain sensor will be activated.
- The rear window wiper will be activated.
- Air-recirculation mode will be deactivated.
- Parking Assist PARKTRONIC will be reset to the previously selected setting.
- The windows and the sliding sunroof will remain closed.
- **Vehicles with 360° camera:** the front image will be deactivated at speeds above 18 km/h.

Activating/deactivating car wash mode

Requirements

- The vehicle is stationary.
- The vehicle is switched on.

Multimedia system:

→  » Settings » Vehicle » Driving

Activating car wash mode

- ▶ Select **Car wash mode**.
- ▶ Select **Activate**.

If one of the settings cannot be selected, this will be shown by a  next to the respective setting.

- ⓘ For an overview of the settings made when you activate car wash mode (→ page 22).

Deactivating car wash mode

- ▶ Select **Switch off**.
The settings of car wash mode will be reset.
- ⓘ Car wash mode is automatically deactivated as soon as your speed exceeds 20 km/h.

Information on using a high-pressure cleaner

 **WARNING** Risk of an accident when using high-pressure cleaners with round-spray nozzles

The water jet can cause externally invisible damage.

Components damaged in this way may unexpectedly fail.

- ▶ Do not use a high-pressure cleaner with round-spray nozzles.
- ▶ Have damaged tyres or chassis parts replaced immediately.

To avoid damage to your vehicle, observe the following when using a high-pressure cleaner:

- the key is at a minimum distance of 3 m away from the vehicle. Otherwise the tailgate could open unintentionally.
- Maintain a distance of at least 30 cm to the vehicle.
- **Vehicles with decorative foil:** Parts of your vehicle are covered with a decorative foil.

Maintain a distance of at least 70 cm between the foil-covered parts of the vehicle and the nozzle of the high-pressure cleaner. Move the nozzle of the high-pressure cleaner around while cleaning. The water temperature of the high-pressure cleaner must not exceed 60°C.

- Observe the information on the correct distance in the equipment manufacturer's operating instructions.
- Do not direct the nozzle of the high-pressure cleaner directly at sensitive parts, e.g. tyres, gaps, electrical components, batteries, illuminants or louvres.

Washing the vehicle by hand

Observe the relevant legal requirements (e.g. in some countries, washing by hand is permitted only in specially designated wash bays).

- ▶ Use a mild cleaning agent (e.g. car shampoo).
- ▶ Do not use acidic cleaning agents.
- ▶ Wash the vehicle with lukewarm water using a soft car sponge. When doing so, do not expose the vehicle to direct sunlight.

▶ Carefully hose the vehicle off with water and dry using a chamois.

ⓘ Observe the notes on the care of car parts (→ page 504).

Notes on paintwork/matt finish paintwork care

To avoid damaging the paintwork and interfering with the driving assistance systems, please observe the following notes:

Paint

- Insect remains: soak with insect remover and rinse off the treated areas afterwards.
- Bird droppings: soak with water and rinse off afterwards.
- Tree resin, oils, fuels and greases: remove by rubbing gently with a cloth soaked in petroleum ether or lighter fluid.
- Coolant and brake fluid: remove with a damp cloth and clean water.
- Tar stains: use tar remover.
- Wax: use silicone remover.

- Do not attach stickers, foil or similar materials. Only have foil attached to the bumper at a qualified specialist workshop.
- Remove dirt immediately, where possible. Do not use acid solutions and acidic cleaners.

Matt finish

- Only use care products approved for Mercedes-Benz.
- Do not attach stickers, foils or similar materials. Only have foil attached to the bumper at a qualified specialist workshop.
- Do not polish the vehicle and light-alloy wheels.
- Only use car washes that correspond to the latest engineering standards.
- Do not use car wash programmes with a final hot wax treatment.
- Do not use paint cleaners, buffing or polishing products, gloss preservers, e.g. wax.

In the event of paintwork damage:

- Always have paintwork repairs carried out at a qualified specialist workshop.

- Make sure the radar sensors are working (→ page 265).

Notes on cleaning decorative foils

Observe the "Notes on paintwork / matt finish paintwork care" (→ page 502). They also apply to matt decorative films.

Observe the notes on cleaning decorative films to avoid damage.

Cleaning

- When cleaning with the high-pressure cleaner, maintain a distance of at least 70 cm between the foil-covered parts of the vehicle and the nozzle of the high-pressure cleaner.
- For cleaning, use plenty of water and a mild cleaning agent without additives or abrasive substances (e.g. a car shampoo approved for Mercedes-Benz).
- Do not use acidic cleaning agents.
- Remove dirt as soon as possible. Avoid rubbing too hard in order not to damage the decorative film irreparably.

- If there is dirt on the finish or if the decorative film is dull: use the paint cleaner recommended and approved for Mercedes-Benz.
- Insect remains: Soak with insect remover and rinse off the treated areas afterwards.
- Bird droppings: Soak with water and rinse off afterwards.
- To prevent water stains, dry a film-wrapped vehicle with a soft, absorbent cloth after every car wash.

Avoiding damage to the decorative film

- The service life and colouring of decorative films are impaired by:
 - Sunlight
 - Temperature (e.g. hot air blower)
 - Weather conditions
 - Stone chippings and dirt
 - Chemical cleaning agents
 - Oily products
- Do not use polish on matt decorative film. Polishing will have the effect of shining the film-wrapped surface.

- Do not treat matt or structured decorative films with wax. Permanent stains may occur.

Scratches, corrosive deposits, areas affected by corrosion and damage caused by incorrect care cannot always be completely repaired. In this case, contact a qualified specialist workshop.

You can obtain more information on care and cleaning agents from the manufacturer.

In the case of film-wrapped surfaces, visual differences may occur between the surfaces that were not protected by a decorative film after a decorative film has been removed.

- ① Have work or repairs to decorative films carried out at a qualified specialist workshop (e.g. at a Mercedes-Benz Service Centre).

Notes on cleaning and care of car parts

⚠ WARNING Risk of entrapment if the windscreen wipers are switched on while the windscreen is being cleaned

If the windscreen wipers are set in motion while you are cleaning the windscreen or wiper blades, you can be trapped by the wiper arm.

▶ Always switch off the windscreen wipers and the drive system before cleaning the windscreen or wiper blades.

! NOTE Damage due to use of acidic cleaning agents

▶ Do not use acidic cleaning agents. Otherwise, the surfaces could be damaged.

To avoid damage to the vehicle, observe the notes on cleaning and care of the following car parts:

Wheels and rims

- Use water and acid-free alloy wheel cleaners.

- Do not use acidic alloy wheel cleaners to remove brake dust. This could damage wheel bolts and brake components.
- To avoid corrosion of the brake discs and pads, drive the vehicle for a few minutes after cleaning before parking it. The brake discs and pads will warm up and dry out.

Windows

! NOTE Damage to electronic components due to excess fluids

When cleaning the windows from the inside, fluids such as cleaning agents or water may run down and get behind trim parts of the vehicle interior and cause damage to electronic components.

- ▶ Use cleaning agents as sparingly as possible.
- ▶ Immediately absorb any excess fluids.

- Clean the windows inside and outside with a damp cloth and with a cleaning agent recommended for Mercedes-Benz.

- Do not use dry cloths or abrasive or solvent-based cleaning agents to clean the insides of windows.

i After changing the wiper blades or treating the vehicle with wax, clean the windscreen thoroughly with cleaning agents recommended for Mercedes-Benz. Failure to observe the application instructions may result in damage, smear marks or dazzling spots.

i Remove external fogging or dirt on the windscreen in front of the multifunction camera. Otherwise, driving systems and driving safety systems may be impaired or unavailable (→ page 265).

Wiper blades

- Move the wiper arms into the replacement position (→ page 21).
 - With the wiper arms folded out, clean the wiper blades with a damp cloth.
- i** Note that the wiper blades are coated. The coating may leave residue on a cloth. Do not rub the wiper blades excessively or clean them too often.

Exterior lighting

- Clean the lenses with a wet sponge and mild cleaning agent (e.g. car shampoo).
- Use only cleaning agents or cleaning cloths that are suitable for plastic lenses.

Vehicle socket (high-voltage battery)

- Use clean water and a soft cloth to clean the vehicle socket.
- Do not use high-pressure cleaners or cleaning agents, such as soap.

Sensors

- Clean the sensors in the front and rear part of the vehicle with car shampoo, plenty of water and a soft cloth (→ page 265).
- When using a high-pressure cleaner, maintain a minimum distance of 30 cm.

Cameras

- Open the camera cover with the multimedia system (→ page 314).
- Use clean water and a soft cloth to clean the camera lenses.
- Do not use a high-pressure cleaner.

- ⓘ Remove external fogging or dirt on the windscreen in front of the multifunction camera. Otherwise, driving systems and driving safety systems may be impaired or unavailable (→ page 265).

Trailer hitch

- Observe the notes on care in the trailer hitch manufacturer's owner's manual.
- Do not clean the ball neck with a high-pressure cleaner or solvent.
- Remove traces of rust on the ball (e.g. with a wire brush).
- Remove dirt with a lint-free cloth.
- After cleaning, lightly oil or grease the ball head.
- ⓘ Before using trailers with anti-swerve coupling, note the manufacturer's owner's manual.

Notes on care of the interior

⚠ WARNING Risk of injury from plastic parts breaking off after the use of solvent-based care products

Care and cleaning products containing solvents can cause surfaces in the cockpit to become porous. When the airbags are deployed, plastic parts may break away.

- ▶ Do not use any care or cleaning products containing solvents to clean the cockpit.

⚠ WARNING Risk of injury or fatal injuries from bleached seat belts

Bleaching or dyeing seat belts can severely weaken them.

This can, for example, cause seat belts to tear or fail in an accident.

- ▶ Never bleach or dye seat belts.

! **NOTE** Property damage due to disinfectants

The interior includes a number of sensitive surfaces such as displays, plastics and leather.

Disinfectants can contain alcohol and other substances that penetrate and damage surfaces. Technology behind buttons and displays can also be damaged.

▶ Do not use disinfectant on interior surfaces.

To avoid damage to the vehicle, observe the following notes on cleaning and care:

Seat belts

- Clean with lukewarm and soapy water.
- Do not use chemical cleaning agents.
- Do not dry by heating them to over 80°C or exposing them to direct sunlight.

Display

- Switch off the display and let it cool down.

- Clean the surface carefully with a microfibre cloth and a suitable display care product (TFT-LCD).
- Do not use any other agents.

Head-up display

- Clean with a soft, non-static, lint-free cloth.
- Do not use cleaning agents.

Plastic trim

- Clean with a damp microfibre cloth.
- For heavy soiling: Use a cleaner recommended for Mercedes-Benz.
- Do not attach stickers, films or similar materials.
- Do not allow cosmetics, insect repellent or sun cream to come in contact with the plastic trim.

Real wood and trim elements

- Clean with a microfibre cloth.
- Black piano-lacquer look: clean with a damp cloth and soapy water.

- For heavy soiling: Use a cleaner recommended for Mercedes-Benz.
- Do not use solvent-based cleaning agents, polishes or waxes.

Roof lining

- Clean with a brush or dry shampoo.

Carpet

- Use a carpet and textile cleaning agent recommended for Mercedes-Benz.

Imitation leather steering wheel

- Clean the entire steering wheel with a damp cotton cloth and a 1% soap solution. Do not spot clean.
- Use cleaning and care products recommended for Mercedes-Benz.
- Do not use a microfibre cloth.
- Do not use oil-based cleaning and care products.

Steering wheel made of genuine leather or DINAMICA

! NOTE Damage caused by wrong cleaners

▶ Do not use solvent-based cleaning agents such as tar remover or wheel cleaner; neither should you use polishes or waxes. Otherwise you may damage the finish.

- Clean with a damp cloth and a 1% soap solution and then wipe with a dry cloth.
 - For heavy soiling: Use a cleaner recommended for Mercedes-Benz.
 - Leather care: Use a leather care agent that has been recommended for Mercedes-Benz.
 - Do not allow the leather to become too damp.
 - Do not use a microfibre cloth.
- i** Leather is a natural product. It exhibits natural surface properties, such as differences in structure, marks caused by growth and injury or subtle colour differences. These surface properties are special features of leather and

not material defects. Furthermore, leather is subject to a natural ageing process in which the surface properties change.

Genuine leather seat covers

- Vacuum up dirt such as crumbs or dust and then clean the seat covers with a damp cotton cloth and wipe down with a dry cloth. Regularly clean the seat covers.
 - For heavy soiling: use a leather care agent recommended for Mercedes-Benz aftercare.
 - Leather care: Use a leather care agent that has been recommended for Mercedes-Benz.
 - Do not use a microfibre cloth.
 - Do not allow the leather to become too damp.
 - Do not use oil-based cleaning and care products.
- i** Leather is a natural product. It exhibits natural surface properties, such as differences in structure, marks caused by growth and injury or subtle colour differences. These surface properties are special features of leather and not material defects. Furthermore, leather is

subject to a natural ageing process in which the surface properties change. Waves or wrinkling in the seat cover may occur due to the stress on the seat; this is caused by the natural leather material. Regular cleaning and care of the leather reduces soiling, wear marks and ageing damage and thus significantly extends its life span. Clothing that can leave stains (e.g. jeans) may discolour the leather.

DINAMICA seat covers

- Vacuum up dirt such as crumbs or dust and then use a damp cloth to clean.
- Do not use a microfibre cloth.

Imitation leather seat covers

- Vacuum up dirt such as crumbs or dust and then use a damp cotton cloth and a 1% soap solution to clean the entire seat cover. Do not spot clean.
- Use cleaning and care products recommended for Mercedes-Benz.
- Do not use a microfibre cloth.

- Do not use oil-based cleaning and care products.

Cloth seat covers

- Vacuum up dirt such as crumbs or dust and then use a damp microfibre cloth and a 1% soap solution to clean the entire seat cover. Do not spot clean.
- Use cleaning and care products recommended for Mercedes-Benz.
- Do not use oil-based cleaning and care products.

Emergency

Removing the safety vest

There is a high-visibility waistcoat compartment on the door shelves of all doors for storing a high-visibility waistcoat.

- ▶ To remove: pull out safety vest bag ① by loop ②.

- ▶ Open the safety vest bag ① and pull out the safety vest.
 - ▶ Replace: Fold up the safety vest, roll it up and place it in the safety vest ①.
 - ▶ Slide the safety vest bag ① along the lower edge of the armrest into the safety vest compartment. Ensure that the loop ② hangs out so that it is easy to reach.
- i** Remove the packaging film before sliding it into the safety vest compartment for a new safety vest. Otherwise, it may cause unintentional slipping or make removing difficult. Observe the legal requirements in the individual countries.

- ① Maximum number of washes
- ② Maximum wash temperature
- ③ Do not bleach
- ④ Do not iron
- ⑤ Do not tumble dry
- ⑥ Do not dry clean
- ⑦ Class 2 safety vest

The requirements defined by the legal standard are only fulfilled if the safety vest is the correct size and is fully closed.

Replace the safety vest in the following cases:

- The reflective strips are damaged or dirty

- The maximum permissible number of washes is exceeded
- The fluorescence property decreases, e.g. due to permanent exposure to sunlight.

Dispose of the safety vest in an environmentally friendly way:

- Please contact your local waste disposal company.

Warning triangle

Removing the warning triangle

- ▶ Open the load compartment floor.

- ▶ Remove warning triangle ①.

Setting up the warning triangle

- ▶ Fold the side reflectors upwards to form a triangle and attach at the top using the upper press-stud.
- ▶ Fold the legs down and out to the side.

First-aid kit (soft-sided) overview

First-aid kit (soft-sided) ① is located in the stowage net on the left-hand side of the load compartment.

Removing the fire extinguisher

⚠ WARNING Risk of accident due to an incorrectly secured fire extinguisher in the driver's footwell

A fire extinguisher may impede pedal travel or block a depressed pedal.

This jeopardises the operating and road safety of the vehicle.

The fire extinguisher can be flung around and injure the driver or other vehicle occupants.

- ▶ Always store and secure the fire extinguisher in the bracket.
- ▶ Do not remove the fire extinguisher while driving.

- ▶ Pull the tab ① upwards.
- ▶ Fold tab ① down.
- ▶ Remove fire extinguisher ②.

Flat tyre

Notes on flat tyres

⚠ WARNING Risk of accident due to a flat tyre

A flat tyre severely affects the driving characteristics as well as steering and braking.

tyres that do not feature run-flat characteristics:

- ▶ Do not drive on with a flat tyre.
- ▶ Change the flat tyre immediately with an emergency spare wheel or spare wheel. Alternatively, consult a qualified specialist workshop.

Run-flat tyres:

- ▶ Observe the information and warning notes on MOExtended tyres (run-flat tyres).

In the event of a flat tyre, the following options are available depending on your vehicle's equipment:

- **Vehicles with MOExtended tyres:** it is possible to continue the journey for a short period of time. Make sure you observe the notes on MOExtended tyres (run-flat tyres) (→ page 511).
- **Vehicles with a TIREFIT kit:** you can seal the tyre so that it is possible to continue the journey for a short period of time. To do this, use the TIREFIT kit (→ page 513).

- (→ page 454) **Vehicles with Mercedes me connect:** you can make a call for breakdown assistance via the overhead control panel in the case of a breakdown .
- **All vehicles:** change the wheel (→ page 538).
- ⓘ (→ page 543) The emergency spare wheel is only available in certain countries.

Notes on MOExtended tyres (run-flat tyres)

⚠ WARNING Risk of accident when driving in limp-home mode

Driving in emergency mode impairs the handling characteristics of the vehicle.

- ▶ Do not exceed the permissible maximum speed of the MOExtended tyres.
- ▶ Avoid any abrupt steering and driving manoeuvres as well as driving over obstacles (kerbs, pot holes, off-road). This applies, in particular, to a loaded vehicle.

▶ Stop driving in the emergency mode if you notice:

- banging noise
- vehicle vibration
- smoke which smells like rubber
- continuous ESP® intervention
- cracks in the tyre sidewalls

▶ After driving in emergency mode, have the rims checked by a qualified specialist workshop with regard to their further use.

▶ The defective tyre must be replaced in every case.

With MOExtended tyres (run-flat tyres), you can continue to drive your vehicle even if there is a total loss of pressure in one or more tyres. However, the tyre affected must not show any clearly visible damage.

You can recognise MOExtended tyres by the MOExtended marking which appears on the side wall of the tyre.

Vehicles with tyre pressure monitoring system:

MOExtended tyres may only be used in conjunction with an activated tyre pressure monitoring system.

If a pressure loss warning message appears in the driver's display, proceed as follows:

- Check the tyre for damage.
- If driving on, observe the following notes.

Driving distance possible in emergency mode after the pressure loss warning:

Load condition	Driving distance possible in emergency mode
Partially laden	80 km
Fully laden	30 km

The driving distance possible in emergency mode may vary depending on the driving style. Observe the maximum permissible speed of 80 km/h.

If a tyre has gone flat and cannot be replaced with an MOExtended tyre, you can use a standard tyre as a temporary measure.

TIREFIT kit storage location

The TIREFIT kit is located under the load compartment floor.

- ① Tyre inflation compressor
- ② Tyre sealant bottle

Depending on the vehicle version, the TIREFIT kit may be located in other positions in the load compartment.

❗ You can find information on the power category (LK) and/or electrical data on the back of the tyre inflation compressor:

- LK2 – 12 V/15 A, 180 W, 0.8 kg

At a distance of approximately 1 m to the tyre inflation compressor and approximately 1.6 m above the ground, the following sound pressure levels apply:

- Emission sound pressure level
L_{PA} 83 dB (A)
- Sound power level L_{WA} 91 dB (A)

The tyre inflation compressor is maintenance-free. If there is a malfunction, please contact a qualified specialist workshop.

Using the TIREFIT kit

Requirements

- Tyre sealant bottle and tyre inflation compressor are ready for use (→ page 44).
- TIREFIT sticker is displayed.
- Gloves are at hand.

You can use TIREFIT tyre sealant to seal perforation damage of up to 4 mm, particularly those in the tyre contact surface. You can use TIREFIT in outside temperatures down to -20 °C.

⚠ WARNING Risk of accident when using tyre sealant

The tyre sealant may be unable to seal the tyre properly, especially in the following cases:

- there are large cuts or punctures in the tyre (larger than damage previously mentioned)
 - the wheel rims have been damaged
 - after journeys with very low tyre pressure or with flat tyres
- ▶ Do not continue driving.
- ▶ Consult a qualified specialist workshop.

⚠ WARNING Risk of injury and poisoning from tyre sealant

Tyre sealant is hazardous to health and causes irritation. Do not allow it to come into contact with your skin, eyes or clothing, and do not swallow it. Do not inhale any vapours. Keep the tyre sealant away from children.

Observe the following if you come into contact with the tyre sealant:

- ▶ Rinse off the tyre sealant from your skin using water immediately.
- ▶ If tyre sealant gets into your eyes, thoroughly rinse them using clean water immediately.
- ▶ If tyre sealant has been swallowed, thoroughly rinse out your mouth immediately and drink plenty of water. Do not induce vomiting and seek medical attention immediately.
- ▶ Change out of clothing which has come into contact with tyre sealant immediately.
- ▶ If an allergic reaction occurs, seek medical attention immediately.

! NOTE Overheating due to the tyre inflation compressor running too long

- ▶ Do not run the tyre inflation compressor for longer than ten minutes without interruption.

Observe the manufacturer's safety notes on the sticker on the tyre sealant bottle.

Have the tyre sealant bottle replaced at a qualified specialist workshop every five years.

- ▶ Do not remove any foreign objects which have pierced the tyre.

- ▶ Remove sticker ① from the tyre inflation compressor housing and affix it to the instrument cluster within the driver's field of vision.

- ▶ Remove sticker ② from the tyre sealant bottle and affix it near the valve on the wheel with the defective tyre.

- ▶ Pull the plug ⑦ with cable and filling hose ③ out of the tyre inflation compressor housing.
- ▶ Insert the tyre sealant bottle ⑨ into the socket ⑥ of the tyre inflation compressor so that the red arrow on tyre sealant bottle ⑨ aligns with the red arrow on the tyre inflation compressor.

- ▶ Rotate the tyre sealant bottle ⑨ clockwise for a quarter of a turn.
- ▶ Insert the plug of the filling hose ③ into the socket ⑤ of the tyre sealant bottle ⑨.
- ▶ Rotate the filling hose ③ clockwise for a quarter of a turn.

- ▶ Remove the valve cap from the valve ⑩ on the faulty tyre.
- ▶ Screw the union nut ④ of the filling hose ③ onto the valve ⑩.

- ▶ Insert the plug ⑦ into a 12-V- socket in your vehicle.
- ▶ Switch on the vehicle.
- ▶ Press the on and off switch ⑥ on the tyre inflation compressor. The tyre inflation compressor is switched on. The tyre is inflated. First, tyre sealant is pumped into the tyre. The pressure may briefly rise to approximately 500 kPa (5 bar/73 psi).

Do not switch off the tyre inflation compressor during this phase!

- ▶ Allow the tyre inflation compressor to run for a maximum ten minutes. The tyre should then have attained a tyre pressure of at least 200 kPa (2.0 bar/29 psi).

If tyre sealant leaks out, make sure you clean the affected area as quickly as possible. It is preferable to use clean water.

If you get tyre sealant on your clothing, have it cleaned as soon as possible with perchloroethylene.

If, after ten minutes, a tyre pressure of 200 kPa (2.0 bar/29 psi) has not been attained:

- ▶ Switch off the tyre inflation compressor.
- ▶ Unscrew the filling hose from the valve of the defective tyre.

Please note that tyre sealant may leak out when unscrewing the filling hose.

- ▶ Drive the vehicle forwards or in reverse very slowly for approximately 10 m.

- ▶ Pump up the tyre again.
After a maximum of ten minutes the tyre pressure must be at least 200 kPa (2.0 bar/29 psi).

⚠ WARNING Risk of accident due to the specified tyre pressure not being attained

If the specified tyre pressure is not attained after the specified time, the tyre is too badly damaged. The tyre sealant cannot repair the tyre in this instance.

The braking and driving characteristics may be greatly impaired.

- ▶ Do not continue driving.
- ▶ Consult a qualified specialist workshop.

! NOTE Staining from leaking tyre sealant

After use, excess tyre sealant may leak out from the filling hose.

- ▶ Therefore, place the filling hose in the plastic bag that contained the TIREFIT kit.

If, after ten minutes, a tyre pressure of 200 kPa (2.0 bar/29 psi) has been attained:

- ▶ Switch off the tyre inflation compressor.
- ▶ Unscrew the filling hose from the valve of the defective tyre.

Please note that tyre sealant may leak out when unscrewing the filling hose.

⚠ WARNING Risk of accident from driving with sealed tyres

A tyre temporarily sealed with tyre sealant impairs the handling characteristics and is not suitable for higher speeds.

- ▶ Adapt your driving style accordingly and drive carefully.
- ▶ Do not exceed the maximum speed limit with a tyre that has been repaired using tyre sealant.

- ▶ Observe the maximum permissible speed of 80 km/h for a tyre sealed with tyre sealant.
- ▶ The sticker with details of the maximum permissible speed must be affixed to the instru-

ment cluster where it can be easily seen by the driver.

! NOTE Staining from leaking tyre sealant

After use, excess tyre sealant may leak out from the filling hose.

- ▶ Therefore, place the filling hose in the plastic bag that contained the TIREFIT kit.

🌿 ENVIRONMENTAL NOTE Environmental pollution caused by environmentally irresponsible disposal

Tyre sealant contains pollutants.

- ▶ Have the tyre sealant bottle disposed of professionally, e.g. at a Mercedes-Benz Service Centre.

- ▶ Stow the tyre sealant bottle, the tyre inflation compressor and the warning triangle.
- ▶ Pull away immediately.

- ▶ Stop driving after approximately ten minutes and check the tyre pressure using the tyre inflation compressor. The tyre pressure must now be at least 130 kPa (1.3 bar/19 psi).

⚠ WARNING Risk of accident due to the specified tyre pressure not being attained

If the specified tyre pressure is not reached, the tyre is too badly damaged. The tyre sealant cannot repair the tyre in this instance.

The braking and driving characteristics may be greatly impaired.

- ▶ Do not continue driving.
- ▶ Consult a qualified specialist workshop.

Countries that have Mercedes-Benz Service24h: you will find a sticker with the telephone number, e.g. on the B-pillar on the driver's side.

- ▶ Correct the tyre pressure if it is still at least 130 kPa (1.3 bar/19 psi). Refer to the tyre pressure table on the fuel filler flap for values.

Increasing the tyre pressure

- ▶ Switch on the tyre inflation compressor.

Decreasing the tyre pressure

- ▶ Remove the tyre sealant bottle from the tyre inflation compressor.
- ▶ Insert the filling hose into the socket of the tyre inflation compressor and rotate it clockwise a quarter of a turn.

- ▶ Press the pressure release button ⑫ next to the manometer ⑪.

When the tyre pressure is correct

- ▶ Unscrew the filling hose from the valve of the sealed tyre.
- ▶ Screw the valve cap onto the valve of the sealed tyre.
- ▶ Stow the tyre sealant bottle and the tyre inflation compressor.
- ▶ Drive to the nearest qualified specialist workshop and have the tyre, tyre sealant bottle and filling hose replaced.

Battery (vehicle)

Notes on the 12 V battery

⚠ WARNING Risk of explosion due to electrostatic charge

Electrostatic charge can ignite the highly explosive gas mixture in the battery.

- ▶ To discharge any electrostatic charge that may have built up, touch the metal vehicle body before handling the battery.

The highly flammable gas mixture is created while the battery is charging and during starting assistance.

For safety reasons, Mercedes-Benz recommends that you only use batteries which have been tested and approved for your vehicle by Mercedes-Benz.

⚠ WARNING Danger of chemical burns from the battery acid

Battery acid is caustic.

- ▶ Avoid contact with the skin, eyes or clothing.
- ▶ Do not lean over the battery.
- ▶ Do not inhale battery gases.
- ▶ Keep children away from the battery.
- ▶ Immediately rinse battery acid off thoroughly with plenty of clean water and seek medical attention immediately.

ENVIRONMENTAL NOTE Environmental damage due to improper disposal of batteries

Batteries contain pollutants. It is illegal to dispose of them with the household rubbish.

Dispose of batteries in an environmentally responsible manner. Take discharged batteries to a qualified specialist workshop or to a collection point for used batteries.

If you have to disconnect the 12 V battery, contact a qualified specialist workshop.

Comply with safety notes and take protective measures when handling batteries.

Risk of explosion.

Fire, naked flames and smoking are prohibited when handling the battery. Avoid creating sparks.

Electrolyte or battery acid is corrosive. Avoid contact with the skin, eyes or clothing. Wear suitable protective clothing, in particular gloves, an apron and a face mask. Immediately rinse electrolyte or acid splashes off with clean water. Consult a doctor immediately.

Wear safety glasses.

Keep children away.

Observe this Owner's Manual.

If you do not want to use the vehicle for a long period of time, consult a qualified specialist workshop.

Notes on the high-voltage battery

⚠ DANGER Risk of fire and explosion from excessive internal pressure of the high-voltage battery

In the event of a vehicle fire, flammable gas can escape and ignite.

- ▶ Stop the charging process immediately in case of unusual odours, smoke or burn marks.
- ▶ Leave the danger zone immediately. Secure the danger zone at a sufficient distance.
- ▶ Call the fire service.

Observe the notes on charging the high-voltage battery (→ page 232).

Risk of explosion.

Fire, naked flames and smoking are prohibited when handling the battery. Avoid creating sparks.

Electrolyte or battery acid is corrosive. Avoid contact with the skin, eyes or clothing. Wear suitable protective clothing, in particular gloves, an apron and a face mask. Immediately rinse electrolyte or acid splashes off with clean water. Consult a doctor immediately.

Wear safety glasses.

Keep children away.

Observe this Owner's Manual.

Notes on starting assistance and charging the 12 V battery

All vehicles

When charging the battery and during starting assistance, always use the jump-start connection point in the engine compartment.

⚠ NOTE Damage to the battery due to over-voltage

When charging using a battery charger without a maximum charging voltage, the battery or the on-board electronics may be damaged.

- ▶ Only use battery chargers with a maximum charging voltage of 14.8 V.

⚠ WARNING Risk of explosion due to the ignition of hydrogen gas

If there is a short circuit or sparks are created, there is a danger of hydrogen gas igniting when you charge the battery.

- ▶ Take care that the positive terminal of a connected battery does not come into contact with vehicle parts.
- ▶ Never place metal objects or tools on a battery.
- ▶ When connecting and disconnecting the battery, always observe the sequence of battery terminals described.

- ▶ During starting assistance, always take care to connect only battery terminals of identical polarity.
- ▶ During starting assistance, observe the sequence described for connecting and disconnecting the jump leads.
- ▶ Do not connect or disconnect the battery terminals with the engine running.

⚠ WARNING Risk of explosion due to explosive mixture of gases

An explosive mixture of gases can escape from the battery during charging and starting assistance.

- ▶ Fire, naked flames, smoking and creating sparks must be avoided.
- ▶ Make sure there is adequate ventilation.
- ▶ Do not stand over the battery.

⚠ WARNING Risk of explosion from a frozen battery

A discharged battery may freeze at temperatures slightly above or below freezing point.

During starting assistance or battery charging, battery gas can be released.

- ▶ Always allow a battery to thaw before charging it or performing starting assistance.

If the indicator/warning lamps in the instrument cluster do not light up at low temperatures, it is very likely that the discharged battery has frozen. In this case you may neither jump-start the vehicle nor charge the battery.

The service life of a battery that has been thawed may be reduced drastically. The starting behaviour may deteriorate, particularly at low temperatures.

It is recommended that you have a thawed battery checked at a qualified specialist workshop.

All vehicles

! NOTE Damage caused by numerous or extended attempts to start the engine

Numerous or extended attempts to start the engine may damage the catalytic converter due to non-combusted fuel.

- ▶ Avoid numerous and extended attempts to start the engine.

Observe the following points during starting assistance and when charging the battery:

- Only use undamaged jump leads/charging cables with a sufficient cross-section and insulated terminal clamps.
- Non-insulated parts of the terminal clamps must not come into contact with other metal parts while the jump leads/charging cables are connected to the battery/jump-start connection point.
- The jump leads/charging cables must not come into contact with any parts which may move when the engine is running.

- Always make sure that neither you nor the battery is electrostatically charged.
- Keep away from fire and naked flames.
- Do not lean over the battery.

Observe the additional following points when charging the battery:

- Only use battery chargers tested and approved for Mercedes-Benz.
- Read the battery charger's operating instructions before charging the battery.

Observe the additional following points during starting assistance:

- Starting assistance may only be provided using vehicles, batteries or other jump start devices with a nominal voltage of 12 V.
- The vehicles must not touch each other.

Starting assistance and charging the 12 V battery

- ▶ Only have starting assistance provided by a qualified specialist workshop, e.g. a Mercedes-Benz Service Centre.

- ▶ Only have the battery charged at a qualified specialist workshop, e.g. a Mercedes-Benz Service Centre.

Replacing the 12 V battery

- ▶ Only have the battery replaced at a qualified specialist workshop, e.g. at a Mercedes-Benz Service Centre.

Tow-starting or towing away

Overview of the permitted towing methods

! NOTE Damage from automatic braking

If one of the following functions is activated, the vehicle will brake automatically in certain situations:

- Active Brake Assist
- Active Distance Assist DISTRONIC
- HOLD function
- Active Parking Assist

To avoid damaging the vehicle, deactivate these systems e.g. during towing or in the car wash.

Mercedes-Benz recommends transporting your vehicle in the case of a breakdown, rather than towing it away.

For towing with both axles on the ground, use a tow rope or tow rod. Do not use tow bar systems.

If you notice that the vehicle has lost coolant, do not have it towed away. Have the vehicle transported instead.

! NOTE Damage to the vehicle due to towing away incorrectly

- ▶ Observe the instructions and notes on towing away.

Vehicles with front wheel drive

Permitted towing methods	
Both axles on the ground	Yes, for a maximum of 50 km at 50 km/h*, only forwards with the driver in the cockpit
Front axle raised	Yes, for a maximum of 50 km* at 50 km/h
Rear axle raised	No

*The towing range can be significantly lower depending on the active auxiliary consumers and environmental conditions.

4MATIC vehicles

Permitted towing methods	
Both axles on the ground	Yes, for a maximum of 50 km at 50 km/h*, only forwards with the driver in the cockpit
Front axle raised	No
Rear axle raised	No

*The towing range can be significantly lower depending on the active auxiliary consumers and environmental conditions.

Towing the vehicle with both axles on the ground

- ▶ Observe the notes on the permitted towing methods (→ page 521).
- ▶ Make sure that the 12-V-battery is connected and charged

Observe the following points when the 12-V-battery is disconnected or discharged

- the drive system cannot be started
- the electric parking brake cannot be released or applied
- The selector lever cannot be put into position **N** or **P**.

Only one transport is permitted when at least one of the following conditions occur:

- If the selector lever cannot be put into position **N**.
- if the 12-V-battery is disconnected or discharged.
- if the display in the instrument cluster is not working
- if the  **Towing not permitted See Owner's Manual** message is displayed
- if the  **Top up coolant See Owner's Manual** message is displayed
- if the  **Stop Switch off the vehicle** message is displayed

- ▶ In such cases, transport the vehicle (→ page 524).

! **NOTE** Damage due to towing away at excessively high speeds or over long distances

The drivetrain could be damaged when towing at excessively high speeds or over long distances.

- ▶ A towing speed of 50 km/h must not be exceeded.
- ▶ A towing distance of 50 km must not be exceeded.

! **WARNING** Risk of accident when towing a vehicle which is too heavy

If the vehicle to be tow-started or towed away is heavier than the permissible gross mass of your vehicle, the following situations can occur:

- the towing eye may become detached.

- the vehicle/trailer combination may swerve or overturn.

- ▶ Before tow-starting or towing away, check if the vehicle to be tow-started or towed away exceeds the permissible gross mass.

If a vehicle has to be tow-started or towed away, its permissible gross mass must not exceed the permissible gross mass of the towing vehicle.

- ▶ Information on the permissible gross mass of the vehicle can be found on the vehicle identification plate (→ page 666).

Towing away the vehicle

- ▶ Fit the towing eye (→ page 525).
- ▶ Fasten the towing device.

! **NOTE** Damage due to incorrect connection of the tow bar

- ▶ Only connect the tow rope or tow bar to the towing eyes.

- ▶ Deactivate the automatic locking mechanism (→ page 132).
- ▶ Do not activate the HOLD function.
- ▶ Deactivate tow-away protection (→ page 149).
- ▶ Deactivate Active Brake Assist (→ page 293).
- ▶ Put the selector lever into position **N**.
- ▶ Release the electric parking brake.
- ▶ Remain in the cockpit during towing and observe the display messages.
- ▶ Do not switch off the vehicle while it is being towed.
- ▶ Do not open the driver's door or front passenger door, because otherwise the selector lever automatically switches to position **P**.

⚠ WARNING Risk of accident due to limited safety-related functions during the towing process

Safety-related functions are limited or no longer available in the following situations:

- the vehicle is switched off.
- the brake system or power steering system is malfunctioning.
- the energy supply or the on-board electrical system is malfunctioning.

▶ In such cases, do not tow the vehicle.

▶ Transport the vehicle (→ page 524).

! NOTE Damage to the drive system due to incorrect towing

The vehicle must not be towed in the following situations:

- The vehicle is switched off.

- The brake system or the power steering is faulty.
- The power supply or the on-board electrical system is faulty.

▶ Do not tow the vehicle in these situations.

! NOTE Damage due to excessive tractive power

If you pull away sharply, the tractive power may be too high and the vehicles could be damaged.

▶ Pull away slowly and smoothly.

Loading the vehicle for transport

- ▶ Observe the notes on towing away (→ page 521).
- ▶ Connect the towing device to the towing eye in order to load the vehicle.
- ▶ Shift the transmission to position **N**.

i The transmission may be locked in position **P** in the event of damage to the electrics. To shift to **N**, provide the on-board electrical system with power (→ page 42).

- ▶ Load the vehicle onto the transporter.
- ▶ Shift the transmission to position **P**.
- ▶ Use the electric parking brake to secure the vehicle against rolling away.
- ▶ Only secure the vehicle by the wheels.

Vehicles with adaptive damping adjustment

⚠ WARNING Risk of an accident when transporting vehicles with adaptive damping adjustment

When transporting vehicles with adaptive damping adjustment, the vehicle/trailer combination may begin to rock and start to skid.

- ▶ Load the vehicle correctly onto the transporter.
- ▶ Secure the vehicle on all four wheels with suitable tensioning straps.

! **NOTE** Damage to the vehicle from securing it incorrectly

- ▶ After loading, the vehicle must be secured on all four wheels. Otherwise, the vehicle could be damaged.
- ▶ A minimum distance of 20 cm upwards and 10 cm downwards must be kept to the transport platform.

- ▶ Secure the vehicle on all four wheels after loading.

- ▶ Make sure that the front and rear axles come to rest on the same transportation vehicle.

! **NOTE** Damage to the drive train due to incorrect positioning of the vehicle

- ▶ Do not position the vehicle above the connection point of the transport vehicle.

Towing eye storage location

The towing eye is under the load compartment floor.

Fitting and removing the towing eye

- ▶ Press the mark on the cover ① inwards and remove.
- ▶ Screw in the towing eye clockwise as far as it will go and tighten.

Vehicles with a trailer hitch: vehicles with a trailer hitch do not have a rear bracket for the towing eye. Fasten the tow bar to the trailer hitch.

- ▶ After removing the towing eye, engage the cover ❶ in the bumper.

! **NOTE** Damage to the vehicle due to incorrect use of the towing eye or trailer hitch

When a towing eye or trailer hitch is used to recover a vehicle, the vehicle may be damaged in the process.

- ▶ Only use the towing eye or trailer hitch to tow away or tow start the vehicle.
- ▶ Do not use the towing eye or trailer hitch to tow the vehicle during recovery.

Tow-starting the vehicle

- ▶ If the drive system does not start, have the vehicle transported to a qualified specialist workshop, e.g. a Mercedes-Benz Service Centre.
- ▶ The drive system cannot be started by tow-starting the vehicle. Do not make any attempts to tow-start the vehicle.

Electrical fuses

Notes on electrical fuses

! **WARNING** Risk of accident and injury due to overloaded lines

If you manipulate or bridge a faulty fuse or if you replace it with a fuse with a higher amperage, the electric line could be overloaded. This could result in a fire.

- ▶ Always replace faulty fuses with specified new fuses containing the correct amperage.

! **NOTE** Damage due to incorrect fuses

Using incorrect fuses can result in damage to electrical components or systems or their functions being considerably restricted.

- ▶ Use only fuses approved for Mercedes-Benz with the respective specified fuse rating.

Blown fuses must be replaced with fuses of the same rating, which you can recognise by the col-

our and the label. The fuse ratings and further information to be observed can be found in the fuse assignment diagram.

Fuse assignment diagram: on the fuse box in the engine compartment (→ page 527).

! **NOTE** Damage or malfunctions caused by moisture

Moisture may cause damage to the electrical system or cause it to malfunction.

- ▶ When the fuse box is open, make sure that no moisture can enter the fuse box.
- ▶ When closing the fuse box, make sure that the seal of the lid is positioned correctly on the fuse box.

If the newly inserted fuse also blows, have the cause traced and rectified at a qualified specialist workshop.

Ensure the following before replacing a fuse:

- The vehicle is secured against rolling away.
- All electrical consumers are switched off.
- The vehicle is switched off.

The electrical fuses are located in various fuse boxes:

- Fuse box in the engine compartment on the left-hand side of the vehicle, when viewed in the direction of travel (→ page 527)
- Fuse box in the front passenger footwell (→ page 528)
- Fuse box in the centre of the load compartment (→ page 529)

Opening and closing the fuse box in the engine compartment

Requirements:

- A dry cloth and a screwdriver are available.

Observe the notes on electrical fuses (→ page 42).

Open

⚠ WARNING Risk of injury from using the windscreen wipers when the bonnet is open

If the windscreen wipers start moving when the bonnet is open, you could be trapped by the wiper linkage.

- ▶ Always switch off the windscreen wipers and vehicle before opening the engine bonnet.

- ▶ Open the bonnet.

- ▶ Remove any existing moisture from the fuse box using a dry cloth.
- ▶ Loosen screws ①.
- ▶ Press clamps ② and lift the fuse box lid up and out.

The fuse assignment diagram is in a recess on the side of the fuse box.

Closing

- ▶ Check whether the seal is positioned correctly in the lid.

- ▶ Place the lid on the fuse box.
- ▶ Make sure that clamps ② engage.
- ▶ Tighten screws ①.
- ▶ Close the bonnet.

Opening and closing the fuse box in the front passenger footwell

Requirements

Observe the notes on electrical fuses (→ page 42).

Opening

- ▶ Lift carpet ① in the direction of the arrow.

- ▶ Loosen screws ② and remove the fuse box lid from the top.

Closing

- ▶ Place the lid on the fuse box.
- ▶ Tighten screws ②.
- ▶ Fold back the carpet.

Opening and closing the fuse box in the load compartment

Requirements

Observe the notes on electrical fuses (→ page 42).

- ▶ Open the load compartment floor.

Fuse box ① is located underneath the load compartment floor.

Notes on noise or unusual handling characteristics

Make sure there are no vibrations, noises or unusual handling characteristics when the vehicle is in motion. This may indicate that the wheels or tyres are damaged. Hidden tyre damage could also be causing the unusual handling characteristics.

If you suspect that a tyre is defective, reduce your speed immediately and have the tyres and wheels checked at a qualified specialist workshop.

Notes on regularly inspecting wheels and tyres

⚠ WARNING Risk of injury due to damaged tyres

Damaged tyres can cause tyre pressure loss.

- ▶ Check the tyres regularly for signs of damage and replace any damaged tyres immediately.

⚠ WARNING Risk of aquaplaning due to insufficient tyre tread

Insufficient tyre tread will result in reduced tyre grip.

The risk of aquaplaning is increased on wet roads, especially when the speed of the vehicle is not adapted to suit the conditions.

- ▶ Thus, you should regularly check the tread depth and the condition of the tread across the entire width of all tyres.

Minimum tread depth for:

- Summer tyres: 3 mm
- M+S tyres: 4 mm
- ▶ For safety reasons, replace the tyres before the legally-prescribed limit for the minimum tread depth is reached.

Carry out the following checks on all wheels regularly, at least once a month or as required, for example, prior to a long journey or driving off-road:

- Check the tyre pressure (→ page 531).

- Visually inspect wheels and tyres for damage.
- Check the valve caps.
- Visual check of the tyre tread depth and the tyre contact surface across the entire width.
The minimum tread depth for summer tyres is 3 mm and for winter tyres 4 mm.

Notes on snow chains

⚠ WARNING Risk of accident due to incorrectly fitted snow chains

If you have fitted snow chains to the rear wheels, they may drag against the vehicle body or chassis components.

- ▶ Never fit snow chains on the rear wheels.
- ▶ Only fit snow chains on the front wheels in pairs.

! **NOTE** Damage to vehicle body or suspension components caused by fitted snow chains

On 4MATIC vehicles, if you fit snow chains on the rear wheels, you can damage vehicle body or suspension components.

▶ On 4MATIC vehicles, only fit snow chains on the front wheels.

Observe the following notes when using snow chains:

- Snow chains are only permissible for certain wheel/tyre combinations. You can obtain information about this from a Mercedes-Benz Service Centre.
- For safety reasons, only use snow chains that have been specifically approved for your vehicle by Mercedes-Benz, or snow chains with the same quality standard.
- If snow chains are fitted, the maximum permissible speed is 50 km/h.

- **Vehicles with Active Parking Assist:** do not use Active Parking Assist when snow chains are fitted.

i You can permanently limit the speed for driving with winter tyres (→ page 276).

i You can deactivate ESP® to start off (→ page 269). This allows the wheels to spin, achieving increased tractive power.

Tyre pressure

Notes on tyre pressure

! **WARNING** Risk of accident due to insufficient or excessive tyre pressure

Underinflated or overinflated tyres pose in particular the following risks:

- The tyres can burst.
- The tyres can wear excessively and/or unevenly.

- The driving characteristics as well as the steering and braking characteristics may be greatly impaired.

▶ Comply with the recommended tyre pressure and check the tyre pressure of all tyres, including the spare wheel, regularly:

- monthly
- when the load changes
- before embarking on a longer journey
- if operating conditions change, e.g. off-road driving

▶ Adjust the tyre pressure, if necessary.

Tyre pressure which is too high or too low can:

- Shorten the service life of the tyres.
- Cause increased tyre damage.
- Adversely affect driving characteristics and thus driving safety, e.g. due to aquaplaning.

⚠ WARNING Risk of accident due to repeated pressure drop in the tyres

The wheels, valves or tyres could be damaged.

Too low a tyre pressure can lead to the tyres bursting.

- ▶ Examine the tyres for foreign objects.
- ▶ Check whether the tyre has a puncture or the valve has a leak.
- ▶ If you are unable to rectify the damage, contact a qualified specialist workshop.

Information on the recommended tyre pressure for the vehicle's factory-fitted tyres can be found on the tyre pressure table on the inside of the socket flap (→ page 532).

Use a suitable pressure gauge to check the tyre pressure. The outer appearance of a tyre does not permit any reliable conclusion about the tyre pressure.

Only correct tyre pressures when the tyres are cold. Conditions for cold tyres:

- The vehicle has been parked with the tyres out of direct sunlight for at least three hours.

- The vehicle has travelled less than 1.6 km.

The vehicle's tyres heat up when driving. As the temperature of the tyres increases, so too does the tyre pressure.

Vehicles with a tyre pressure monitoring system: you can also see the tyre pressure in the driver's display (→ page 533).

Notes on trailer operation

Always inflate the rear axle tyres to the recommended tyre pressures on the tyre pressure table for increased load.

Tyre pressure table

The tyre pressure table is on the inside of the socket flap.

		kPa		psi		kPa		psi	
FRONT	Icon 1								
	Icon 2								
REAR	Icon 3								
	Icon 4								

A 213 584 37 03 1234567

The tyre pressure table shows the recommended tyre pressure for all tyres approved for this vehicle. The recommended tyre pressures apply for cold tyres under various operating conditions, i.e. loading and/or speed of the vehicle.

If one or more tyre sizes precede a tyre pressure, the tyre pressure information following is only valid for those tyre sizes.

If the preceding tyre sizes are complemented by the  symbol, the tyre pressure information following shows alternative tyre pressures. These tyre pressures may improve your vehicle's ride comfort. Energy consumption may then increase slightly.

The load conditions "partially laden" and "fully laden" are defined in the table for different numbers of passengers and amounts of luggage. The actual number of seats may differ from this.

Be sure to also observe the following further related subjects:

- Notes on tyre pressure (→ page 531)

Tyre pressure monitoring system

Function of the tyre pressure monitoring system

The system checks the tyre pressure and the tyre temperature of the tyres fitted to the vehicle by means of the tyre pressure sensor.

The tyre pressure and the tyre temperature are displayed in the driver display.

In the event of significant pressure loss or excessive temperature of the tyres, you are warned via display messages (→ page 735) or the warning lamp  in the driver display (→ page 753).

The tyre pressure monitoring system is only an aid. It is the driver's responsibility to set the tyre pressure to the recommended cold tyre pressure suitable for the operating situation.

In most cases, the tyre pressure monitoring system will automatically update the new reference values after you have changed the tyre pressure. You can, however, also update the reference values by restarting the tyre pressure monitoring system manually (→ page 534).

System limits

The system may be impaired or may not function particularly in the following situations:

- incorrect reference values were taught in.
- sudden pressure loss caused by a foreign object penetrating the tyre, for example.
- there is a fault from another radio signal source.

Checking the tyre pressure with the tyre pressure monitoring system

Requirements

- The vehicle is switched on.

Driver display:

▶ Press  to confirm.

One of the following displays appears:

- Current tyre pressure of each wheel:

- **Tyre pressures will be displayed after a few minutes of driving:** current values are not yet known to the system. The pressure/tempera-

ture values of each tyre are displayed as soon as they are known to the system.

- **Tyre pressure monitor active:** the teach-in process of the system is not yet complete. The tyre pressures are already being monitored.

▶ Compare the current tyre pressure with the recommended tyre pressure for the current operating condition (→ page 532). Additionally, observe the notes on cold tyres (→ page 531).

- ⓘ The values displayed in the driver display may deviate from those of the tyre pressure gauge as they refer to sea level. At high elevations, the tyre pressure values indicated by a pressure gauge are higher than those shown by the driver display.

Restarting the tyre pressure monitoring system

Requirements

- The recommended tyre pressure is correctly set for the respective operating condition on each of the four wheels (→ page 531).

Restart the tyre pressure monitoring system in the following situations:

- The tyre pressure has changed.
- The wheels or tyres have been changed or newly fitted.

Driver display:

→  ▶ Service

- ▶ Press to display the tyre pressure.
- ▶ Press again to display the options.
- ▶ Select **Tyre pressure** and confirm with . The driver display shows the message **Use current tyre pressures as new reference values?**
- ▶ Select **Yes** and confirm the restart with . The driver display shows the message **Tyre pressure monitor restarted**.

Current warning messages are deleted and the  yellow warning lamp goes out.

After you have driven for a few minutes, the system checks whether the current tyre pressures are within the specified range. The cur-

rent tyre pressures are then accepted as reference values and monitored.

If the tyre pressure values are not within the prescribed range, the message **Please correct tyre pressure** appears.

Wheel change

Notes on selecting, fitting and replacing tyres

⚠ WARNING Risk of accident due to incorrect wheel and tyre dimensions

If wheels and tyres of the wrong size are fitted, the service brakes or components in the brake system and in the wheel suspension may be damaged.

- ▶ Always replace wheels and tyres with those that fulfil the specifications of the original part.

For wheels, pay attention to the following:

- Designation
- Type

For tyres, pay attention to the following:

- Designation
- Manufacturer
- Type

⚠ WARNING Risk of injury through exceeding the specified tyre load-bearing capacity or the permissible speed rating

Exceeding the load-bearing capacity of the tyres can lead to tyre damage and could cause the tyres to explode.

- ▶ Therefore, only use tyre types and sizes approved for your vehicle model.
- ▶ Observe the tyre load-bearing capacity rating and speed rating required for your vehicle.

! NOTE Vehicle and tyre damage caused by non-approved tyre types and sizes

For safety reasons, only use tyres, wheels and accessories which have been specially approved by Mercedes-Benz for your vehicle.

These tyres are specially adapted to the active safety systems, such as ABS, ESP® and 4MATIC, and marked as follows:

- MO = Mercedes-Benz Original
- MOE = Mercedes-Benz Original Extended (run-flat tyres only for certain wheels)
- MO1 = Mercedes-Benz Original (only certain AMG tyres)

Otherwise, certain properties, such as driving characteristics, vehicle noise emissions, consumption, etc. could be adversely affected. Furthermore, other tyre sizes could result in the tyres rubbing against the body and axle components when loaded. This could result in damage to the tyre or the vehicle.

Only use tyres, wheels and accessories that have been checked and recommended by Mercedes-Benz.

! NOTE Risk to driving safety from retreaded tyres

Retreaded tyres are neither tested nor recommended by Mercedes-Benz, since previous damage cannot always be detected on retreaded tyres.

For this reason driving safety cannot be guaranteed.

- ▶ Do not use used tyres if you have no information about their previous usage.

! NOTE Possible wheel and tyre damage when driving over obstacles

Large wheels have a smaller section width. As the section width decreases, the risk of wheels and tyres being damaged when driving over obstacles increases.

- ▶ Avoid obstacles or drive especially carefully.
- ▶ Reduce your speed when driving over kerbs, speed bumps, manhole covers and potholes.
- ▶ Avoid particularly high kerbs.

! **NOTE** Possible wheel and tyre damage when parking on kerbs or in potholes

Parking on kerbs or in potholes can damage the wheels and tyres.

- ▶ Only park on level surfaces if possible.
- ▶ Avoid kerbs and potholes when parking.

! **NOTE** Damage to electronic component parts due to the use of tyre-fitting tools

Vehicles with tyre pressure monitoring system: there are electronic component parts in the wheel.

If tyre-fitting tools are positioned in the area of the valve, the electronic components could be damaged.

- ▶ Tyre-fitting tools should not be applied in the area of the valve.
- ▶ Always have tyres changed at a qualified specialist workshop.

! **NOTE** Damage to summer tyres at low ambient temperatures

At low ambient temperatures, tears could form when driving with summer tyres, causing permanent damage to the tyre.

- ▶ At temperatures below 7 °C use  M+S tyres.

Accessory parts which are not approved for your vehicle by Mercedes-Benz, or which are not used correctly, can impair the operating safety.

Before purchasing and using non-approved accessories, visit a qualified specialist workshop and enquire about:

- Suitability
- Legal stipulations
- Factory recommendations

! **WARNING** Risk of accident with sport tyres

The special tyre tread in combination with the optimised tyre compound means that the risk of skidding or aquaplaning on wet roads is increased.

In addition, the tyre grip is greatly reduced at a low outside temperature and tyre running temperature.

- ▶ Switch on the ESP[®] and adapt your driving style accordingly.
- ▶ Use  M+S tyres at outside temperatures of less than 7 °C.
- ▶ Only use tyres suitable for the intended use.

Observe the following when selecting, fitting and replacing tyres:

- Country-specific requirements for tyre approval that define a specific tyre type for your vehicle.
- The use of certain tyre types in certain regions and areas of operation can be advisable.

- Only use tyres and wheels of the same type (summer tyres, winter tyres, MOExtended tyres) and the same make.
- Only fit wheels of the same size on one axle (left and right).
It is only permissible to fit a different wheel size in the event of a flat tyre in order to drive to the specialist workshop.
- Do not make any modifications to the brake system, the wheels or the tyres.
The use of shims or brake dust shields is not permitted and may invalidate the vehicle's general operating permit.
- **Vehicles with a tyre pressure monitoring system:** all fitted wheels must be equipped with functioning sensors for the tyre pressure monitoring system.
- At temperatures below 7 °C, use winter tyres or all-season tyres marked  M+S for all wheels.
Winter tyres provide the best possible grip in wintry road conditions.

- For M+S tyres, only use tyres with the same tread.
 - Observe the maximum permissible speed for the M+S tyres fitted.
If the tyre's maximum speed is below that of the vehicle, this must be indicated by an appropriate label in the driver's field of vision.
 - Run in new tyres at moderate speeds for the first 100 km.
 - Replace the tyres after six years at the latest, regardless of wear.
 - **When replacing with tyres that do not feature run-flat characteristics:** Vehicles with MOExtended tyres are not equipped with a TIREFIT kit at the factory. Equip the vehicle with a TIREFIT kit after replacing with tyres that do not feature run-flat characteristics, e.g. winter tyres.
-  You can permanently limit the speed for driving with winter tyres (→ page 276).
- For more information on wheels and tyres, contact a qualified specialist workshop.

Notes on changing wheels

 **WARNING** Risk of injury through different wheel sizes

Interchanging the front and rear wheels can severely impair the driving characteristics. The disk brakes or wheel suspension components may also be damaged.

 Only interchange the front and rear wheels if the wheels and tyres have the same dimensions.

Interchanging the front and rear wheels if the wheels or tyres have different dimensions can render the general operating permit invalid. Observe the instructions and safety notes on "Changing a wheel" (→ page 534).

The wear patterns on the front and rear wheels differ:

- front wheels wear more on the tyre shoulder
- rear wheels wear more in the centre of the tyre

Do not drive with tyres that have too little tread depth. This significantly reduces traction on wet roads (aquaplaning).

On vehicles with the same front and rear wheel size, you can interchange the wheels every 5000 to 10,000 km, depending on the wear. Ensure the direction of rotation is maintained for the wheels.

Notes on storing wheels

When storing wheels, observe the following notes:

- After removing wheels, store them in a cool, dry and preferably dark place.
- Protect the tyres from contact with oil, grease or fuel.

Overview of the tyre-change tool kit

Apart from some country-specific variants, vehicles are not equipped with a tyre-change tool kit. For more information on which tyre-changing tools are required and approved for performing a

wheel change on your vehicle, consult a qualified specialist workshop.

You require the following tools, foreexample, to change a wheel:

- Jack
- Chock
- Wheel wrench
- Centring pin

i The jack weighs approximately 3.4 kg. The maximum load capacity of the jack can be found on the sticker affixed to the jack. The jack is maintenance-free. If there is a malfunction, please contact a qualified specialist workshop.

The tyre-change tool kit is located in tool bag **1** in the load compartment.

i When stowing the tool bag, make sure that it is adequately secured.

The tool bag contains:

- Jack
- Gloves
- Wheel wrench
- Centring pin
- Folding chock
- Ratchet for jack

Preparing the vehicle for a wheel change

Requirements

- The vehicle is not on a slope.

- The vehicle is on solid, non-slippery and level ground.
- The required tyre-change tool kit is available.

i If your vehicle is not equipped with the tyre-change tool kit, consult a qualified specialist workshop to find out about suitable tools.

- ▶ Apply the electric parking brake manually.
- ▶ Move the front wheels to the straight-ahead position.
- ▶ Shift the transmission to position **P**.
- ▶ Switch off the vehicle.
- ▶ Make sure that the vehicle cannot be started.
- ▶ Place chocks or other suitable items under the front and rear of the wheel that is diagonally opposite the wheel you wish to change.

Raising the vehicle when changing a wheel

Requirements

- There are no persons in the vehicle.
- The vehicle has been prepared for a wheel change (→ page 538).

Important notes on using the jack:

- Use only a vehicle-specific jack that has been approved by Mercedes-Benz to raise the vehicle.
- The jack is only designed for raising and holding the vehicle for a short time while a wheel is being changed and not for maintenance work under the vehicle.
- The jack must be placed on a firm, flat and non-slip surface. If necessary, use a large, flat, load-bearing, non-slip underlay.
- The foot of the jack must be positioned vertically under the jack support point.

Rules of conduct when the vehicle is raised:

- Never place your hands or feet under the vehicle.
- Never lie under the vehicle.
- Do not start the vehicle and do not release the electric parking brake.
- Do not open or close any doors or the tailgate.

- ▶ Using the wheel wrench, loosen the wheel bolts on the wheel you wish to change by about one full turn. Do not unscrew the bolts completely.

Position of the jack support points

⚠ WARNING Risk of injury from incorrect positioning of the jack

If you do not position the jack correctly at the appropriate jacking point of the vehicle, the jack could tip with the vehicle raised.

- ▶ Only position the jack at the appropriate jacking point of the vehicle. The base of the jack must be positioned vertically under the jacking point of the vehicle.

! **NOTE** Damage to the vehicle due to using an unsuitable jack

You can damage the vehicle and, in particular, the high-voltage battery if you use a jack that is not specifically designed for the jack support points of the vehicle.

- ▶ Only use jacks that are specifically designed for the jack support points, or use an appropriate adapter.

! **NOTE** Risk of damage to the vehicle due to incorrect positioning of the jack

If you do not position the jack at the designated jack support points, you could damage your vehicle and, in particular, the high-voltage battery.

- ▶ Only position the jack at the designated jack support points.

- ▶ Take the ratchet out of the tyre-change tool kit and place it on the hexagon nut of the jack so that the letters "AUF" are visible.

- ▶ Position support ② of jack ④ on jack support point ①.
- ▶ Turn ratchet ③ clockwise until support ② sits completely on jack support point ① and the base of the jack lies evenly on the ground.
- ▶ Turn ratchet ③ until the tyre is raised a maximum of 3 cm from the ground.
- ▶ Loosen and remove the wheel (→ page 541).

Removing a wheel

Requirements

- The vehicle is raised (→ page 539).

When changing a wheel, avoid applying any force to the brake discs, since this could impair the level of comfort when braking.

! **NOTE** Damage to threading from dirt on wheel bolts

▶ Do not place wheel bolts in sand or on a dirty surface.

▶ Unscrew the uppermost wheel bolt completely.

- ▶ Screw centring pin ① into the thread instead of the wheel bolt.
- ▶ Unscrew the remaining wheel bolts completely.
- ▶ Remove the wheel.

Fitting a new wheel

Requirements

- The wheel to be changed is removed and the centring pin is screwed in (→ page 541).

⚠ WARNING Risk of accident from losing a wheel

Oiled or greased wheel bolts can cause the wheel bolts to come loose, as too can damaged wheel bolts or wheel hub threads.

- ▶ Never oil or grease the threads.
- ▶ In the event of damage to the threads, contact a qualified specialist workshop immediately.
- ▶ Have the damaged wheel bolts or damaged hub threads replaced.
- ▶ Do not continue driving.

- ▶ Observe the information on the choice of tyres (→ page 534).

For tyres with a specified direction of rotation, an arrow on the side wall of the tyre indicates the correct direction of rotation. Observe the direction of rotation when fitting.

! NOTE Damage to the wheels' plastic elements when changing a wheel

Plastic elements on wheels may be damaged when removing and repositioning the wheel.

- ▶ Do not raise the wheels by the plastic elements when removing and repositioning.
- ▶ Slide the wheel to be mounted onto the centring pin and push it on.

⚠ WARNING Risk of injury from tightening wheel bolts and nuts

If you tighten the wheel bolts or wheel nuts when the vehicle is raised, the jack could tip.

- ▶ Only tighten wheel bolts or wheel nuts when the vehicle is on the ground.
- ▶ Be sure to observe the instructions and safety notes on "Changing a wheel" (→ page 534).
- ▶ For safety reasons, only use wheel bolts which have been approved by Mercedes-Benz and for the wheel in question.

- ▶ Tighten the wheel bolts evenly in a diagonal pattern in the order indicated until they are finger-tight.

- ▶ Unscrew and remove the centring pin.
- ▶ Tighten the last wheel bolt until it is finger-tight.
- ▶ Lower the vehicle (→ page 542).

Lowering the vehicle after a wheel change

Requirements

- The new wheel has been fitted (→ page 541).

- ▶ **To lower the vehicle:** place the ratchet onto the hexagon nut of the jack so that the letters "AB" are visible and turn anti-clockwise.

- ▶ Tighten the wheel bolts evenly in a diagonal pattern in the order indicated ① to ⑤ with an initial maximum force of 80 Nm.
- ▶ Tighten the wheel bolts evenly in a diagonal pattern in the order indicated ① to ⑤ with the specified tightening torque of 150 Nm.

⚠ WARNING Risk of accident due to incorrect tightening torque

The wheels could come loose if the wheel bolts or wheel nuts are not tightened to the prescribed torque.

- ▶ Ensure that the wheel bolts or wheel nuts are tightened to the prescribed tightening torque.
- ▶ If you are not sure, do not move the vehicle. Contact a qualified specialist workshop and have the tightening torque checked immediately.

- ▶ Check the tyre pressure of the newly fitted wheel and adjust it if necessary.

i The following does not apply if the new wheel is an emergency spare wheel.

- ▶ **Vehicles with a tyre pressure monitoring system:** restart the tyre pressure monitoring system (→ page 534).

Emergency spare wheel

Notes on the emergency spare wheel

⚠ WARNING Risk of accident caused by incorrect wheel and tyre dimensions

The wheel or tyre size and the tyre type of the emergency spare wheel or spare wheel and the wheel to be replaced may differ. The emergency spare wheel or spare wheel can significantly impair driving characteristics of the vehicle.

To prevent hazardous situations:

- ▶ Drive carefully.
- ▶ Never fit more than one emergency spare wheel or spare wheel that differs in size.
- ▶ Only use an emergency spare wheel or spare wheel briefly.
- ▶ Do not deactivate ESP®.
- ▶ Have the emergency spare wheel or spare wheel of a different size replaced at the nearest qualified specialist work-

shop. The new wheel must have the correct dimensions.

Observe the following notes on fitting an emergency spare wheel:

- The maximum permissible speed with an emergency spare wheel fitted is 80 km/h.
- Do not fit the emergency spare wheel with snow chains.
- Replace the emergency spare wheel after six years at the latest, regardless of wear.
- Use the included wheel bolts for the emergency spare wheel.
- Check the tyre pressure of the emergency spare wheel when fitted. Correct the pressure as necessary.

- i** The specified tyre pressure is stated on the label of the emergency spare wheel.
- i** **Vehicles with a tyre pressure monitoring system:** if an emergency spare wheel is fitted, the tyre pressure monitoring system cannot function reliably. For a few minutes after an emergency spare wheel is fitted, the system may

still display the tyre pressure of the removed wheel. Only restart the system when the emergency spare wheel has been replaced with a new wheel.

Be sure to also observe the following further related subjects:

- Notes on tyre pressure (→ page 531)
- Tyre pressure table (→ page 532)
- Notes on fitting tyres (→ page 534)
- Fitting an emergency spare wheel (→ page 538)

Notes on technical data

The technical data was determined in accordance with EU Directives. The data stated only applies to vehicles with standard equipment. You can obtain further information from a Mercedes-Benz Service Centre.

Only for certain countries: you can find vehicle-specific vehicle data in the COC documents (CERTIFICATE OF CONFORMITY). These documents are supplied when the vehicle is delivered.

On-board electronics

Notes on tampering with the drive system

! **NOTE** Premature wear through improper maintenance

Improper maintenance may cause vehicle components to wear more quickly and the vehicle's operating permit may be invalidated.

- ▶ Always have work on the drive system and related components carried out at a qualified specialist workshop.

Two-way radios

Notes on installing two-way radios

! **WARNING** Risk of accident due to improper work on two-way radios

If two-way radios are manipulated or retrofitted incorrectly, the electromagnetic radiation from the two-way radios can interfere with the vehicle electronics and jeopardise the operating safety of the vehicle.

- ▶ You should have all work on electrical and electronic components carried out at a qualified specialist workshop.

! **WARNING** Risk of accident due to improper operation of two-way radios

If you use two-way radios in the vehicle improperly, their electromagnetic radiation can disrupt the vehicle's electronics. This is the case in the following situations, in particular:

- The two-way radio is not connected to an exterior aerial.
- The exterior aerial is fitted incorrectly or is not a low-reflection aerial.

This could jeopardise the operating safety of the vehicle.

- ▶ Have the low-reflection exterior aerial fitted at a qualified specialist workshop.
- ▶ When operating two-way radios in the vehicle, always connect them to the low-reflection exterior aerial.

! **NOTE** Invalidation of the operating permit due to failure to comply with the instructions for installation and use

The operating permit may be invalidated if the instructions for installation and use of two-way radios are not observed.

- ▶ Only use approved frequency bands.
- ▶ Observe the maximum permissible output power in these frequency bands.
- ▶ Only use approved aerial positions.

① Rear roof area

Fitting a roof aerial to vehicles with a panoramic sliding sunroof is not permitted.

Use Technical Specification ISO/TS 21609 (Road Vehicles – "EMCs for installation of aftermarket radio frequency transmitting equipment") when retrofitting two-way radios. Comply with the legal requirements for detachable parts.

If your vehicle has fittings for two-way radio equipment, use the power supply and aerial connectors provided in the pre-installation. Observe the manufacturer's supplements when fitting.

■ Two-way radio transmission output

The maximum transmission output (PEAK) at the base of the aerial must not exceed the values in the following table.

Frequency band and maximum transmission output

Frequency band	Maximum transmission output
2-m- frequency band 144 - 174 MHz	50 W
Terrestrial Trunked Radio (TETRA) 380 - 460 MHz	10 W

Frequency band	Maximum transmission output
Two-way radio 2G	2 W
Two-way radio 3G/4G/5G	0.5 W

The following can be used in the vehicle without restrictions:

- two-way radios with a maximum transmission output of up to 100 mW
- two-way radios with transmitter frequencies in the 380 -410 MHz frequency band and a maximum transmission output of up to 2 W (TETRA)
- mobile phones (2G/3G/4G/5G)

There are no restrictions when positioning the aerial on the outside of the vehicle for the following frequency bands:

- Terrestrial Trunked Radio (TETRA)
- 2G/3G/4G/5G

Regulatory radio information

Specific information on wireless applications in accordance with 2014/53/EU

Besides the typical frequencies for mobile communication cars by Mercedes-Benz make use of the following automotive radio applications.

Type of wireless applications and specifications in accordance with 2014/53/EU

Technology	Frequency range	Transmission output/magnetic field strength
Remote Keyless Entry	20 kHz (9–90 kHz)	≤ 72 dBμA/m at 10m
Wireless Power Transmission	105 kHz (90–119 kHz)	≤ 42 dBμA/m at 10m
Remote Keyless Entry	120 kHz (119–135 kHz)	≤ 42 dBμA/m at 10m
Wireless Power Transmission	127 kHz (119–135 kHz)	≤ 66 dBμA/m at 10m with the magnetic field strength level decreasing 3dB/octave above 119 kHz
Near-field communication	13.553–13.567 MHz	≤ 42 dBμA/m at 10m
Remote Keyless Entry, Garage Door Opener, Tire Pressure Monitoring	433 MHz (433.05–434.79 MHz)	≤ 10 mW ERP

Technology	Frequency range	Transmission output/magnetic field strength
Block Heater Remote Control, Garage Door Opener	868 MHz (868.0–868.6 MHz)	≤ 25 mW ERP
Block Heater Remote Control, Garage Door Opener	869 MHz (868.7–869.2 MHz)	≤ 25 mW ERP
Bluetooth, Klear, RLAN, wireless Headphones	2.4 GHz ISM band (2400–2483.5 MHz)	≤ 100 mW EIRP
RLAN	5.1 GHz UNII-1 (5150–5250 MHz)	≤ 40 mW EIRP
Interior Monitoring Radar, RLAN	5.8 GHz UNII-3 (5725–5875 MHz)	≤ 40 mW EIRP
Remote Keyless Entry	7.25 GHz UWB (6.0–8.5 GHz)	≤ -41.3 dBm/MHz EIRP mean ≤ 0 dBm/MHz EIRP peak
76 GHz radar	76–77 GHz	≤ 55 dBm peak EIRP
Compensator ECE DE003 and ECE DE004	GSM (E-GSM 900)	< +33 dBm
	GSM (E-GSM 1800)	< +30 dBm
	UMTS (I, III, VIII)	< +23 dBm
	LTE (B1, B3, B7, B8, B20)	< +23 dBm
HERMES (Hardware for Enhanced Remote, Mobility & Emergency Services)	WLAN (2400–2483.5 MHz)	< 20 dBm
	WLAN (5736–5833 MHz)	< 14 dBm

Technology	Frequency range	Transmission output/magnetic field strength
	GSM (E-GSM 900, Class 4)	< +33 dBm (± 2 dB)
	GSM (E-GSM 1800, Class 1)	< +30 dBm (± 2 dB)
	GSM (E-GSM 900 8-PSK, Class E2)	< +27 dBm (± 3 dB)
	GSM (E-GSM 1800 8-PSK, Class E2)	< +26 dBm (± 3 dB/ -4 dB)
	UMTS (2100 WCDMA FDD B1, Class 3)	< +24 dBm (± 1 dB/ -3 dB)
	LTE (FDD B I, B III, B38, B39, B40, B41, Class 3)	< +23 dBm (± 2 dB)
	GPS (1575,42 MHz ± 2 MHz)	Receiving only
RAMSES (Router And Mobile ServiceS)	GSM (E-GSM 850 / E-GSM 900, Class 4)	< +32.5 dBm (± 1 dB)
	GSM (E-GSM 1800 / E-GSM 1900, Class 4)	< +29.5 dBm (± 1 dB)
	UMTS (WCDMA FDD I, II, III, IV, V, VIII, XIX, Class 3)	< +23.5 dBm (± 1 dB)
	LTE (FDD B1, B2, B3, B4, B5, B7, B8, B9, B18, B19, B21, B28, Class 3)	< +23 dBm (± 1 dB)
	LTE (TDD B38, B40, B41, Class 3)	< +23 dBm (± 1 dB)
	GNSS (1559-1610 MHz)	Receiving only

Overview of manufacturers

Manufacturer	Manufacturer information
ADC	ADC Automotive Distance Control Systems GmbH, Peter-Dornier-Straße 10, 88131 Lindau, Germany
Bosch	Robert Bosch GmbH, Daimlerstraße 6, 71229 Leonberg, Germany

Manufacturer	Manufacturer information
Continental Antenna	Continental Advanced Antenna GmbH, Römerring 1, 31137 Hildesheim, Germany
Continental Automotive	Continental Automotive GmbH, Siemensstraße 12, 93055 Regensburg, Germany
Continental Automotive Technologies	Continental Automotive Technologies GmbH, VDO-Straße 1, 64832 Babenhausen, Germany
Gentex	Gentex Corporation, 600 North Centennial Street, Zeeland MI 49464, USA

Manufacturer	Manufacturer information
Harman Becker	Harman Becker Automotive Systems GmbH, Becker-Goehring-Straße 18, 76307 Karlsbad, Germany
HELLA	HELLA KGaA Hueck & Co., Rixbecker Straße 75, 59552 Lippstadt, Germany
Hirschmann	Hirschmann Car Communication GmbH, Stuttgarter Straße 45-51, 72654 Neckartenzlingen, Germany
Huf Baolong	Huf Baolong Electronics Bretten GmbH, Gewerbestraße 40, 75015 Bretten, Germany

Manufacturer	Manufacturer information
HUF	HUF Hülsbeck & Fürst GmbH & Co. KG, Steeger Straße 17, 42551 Velbert, Germany
KATHREIN Id	KATHREIN Automotive GmbH & Co. KG, Römerring 1, 31137 Hildesheim, Germany
LEOPOLD KOSTAL	LEOPOLD KOSTAL GmbH & Co. KG, Hauert 11, 44227 Dortmund, Germany
MARQUARDT	MARQUARDT GmbH, Schloßstraße 16, 78604 Rietheim-Weilheim, Germany

Manufacturer	Manufacturer information
Meta System	Meta System S.P.A., Via T. Galimberti 5, 42124 Reggio Emilia, Italy
Molex	Molex CVS Dabendorf GmbH, Märkische Straße 72, 15806 Zossen, Germany
Panasonic	Panasonic Automotive Systems Europe GmbH, Robert-Bosch-Straße 27, 63225 Langen, Germany
Schrader	Schrader Electronics Ltd., 11 Technology Park, Belfast Road, Antrim BT41 1QS, Northern Ireland, United Kingdom

Manufacturer	Manufacturer information
Sennheiser	Sennheiser electronic GmbH & Co. KG, Am Labor 1, 30900 Wedemark, Germany
Veoneer	Veoneer Sweden AB, Wallentinsvägen 22, 44737 Vårgårda, Sweden
WITTE-Velbert	WITTE-Velbert GmbH & Co. KG, Hoefenstr. 3-15, 42551 Velbert, Germany

Further specific information

Rear Seat Entertainment System:

This system is not protected against harmful interference and must not cause interference in properly approved systems.

This product is approved by ANATEL in accordance with the procedures set out in Resolution

242/2000 and complies with the relevant technical requirements. Further information can be found on the <https://www.anatel.gov.br>

Further specific information

Charging unit for the wireless charging of mobile devices (WMI):

D-WMI2020A:

This vehicle is equipped with the following radio frequency component approved by CONATEL - Paraguay: Wireless interface for mobile devices,

Continental brand, model D-WMI2020A, manufactured by Continental Automotive GmbH.

Radio equipment approval number: 2019-11-I-0600

Rear Seat Entertainment System:

DAIRSE:

Importer: Condor S.A.C.I Casa Central, J.B. Gorostiaga 315 y Guaraníes, Asunción, Paraguay, (595 21) 569 7000, sac@condor.com.py

Information on installation clearances

Charging unit for the wireless charging of mobile devices (WMI):

The charging unit for wireless charging of mobile devices (WMI) complies with FCC and IC radiation

exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 0 cm (in contact) between the source of radiation and your body. This transmitter must not be placed in the same location as or used at the same time as another transmitter or antenna.

Rear Seat Entertainment System:

USA: "This device complies with part 15 of the FCC Rules and Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) This device must not cause any harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This device must be installed and used at a distance of at least 6 cm from the body."

Canada: "This device complies with ISED Canada licence-exempt RSS standard(s). Operation is sub-

ject to the following two conditions: (1) This device must not cause interference, and (2) this device must accept any interference received, including interference that may cause undesired operation of the device.

This equipment complies with ISED radiation exposure limits established for an uncontrolled environment. This equipment must be installed and operated with a minimum distance of 5 cm between the radiation source and your body."

Radar sensors:

ARS4-C (ADC), ARS4-B (ADC), ARS4-A (ADC), FR5CPCCF (Bosch), MRR1REAR (Bosch), MRREVO14F (Bosch), LRR3 (Bosch), 77V12BSM (Veoneer), 77V12CRN (Veoneer), MMRV1 (Veoneer)

USA only: Information on exposure to high-frequency radiation:

This equipment complies with FCC radiation exposure limits established for an uncontrolled environment. This equipment must be installed and operated with a minimum distance of 20 cm between the radiation source and your body.

This transmitter must not be placed in the same location as or used at the same time as another antenna or transmitter.

Canada only: This equipment should be installed and operated with a minimum distance of 20 cm between the radiation source and your body.

BT Audio Transmitter (BTT100):

This equipment complies with FCC and IC radiation exposure limits established for an uncontrolled environment. This equipment must be installed and operated with a minimum distance of 9 cm between the radiation source and your body.

This transmitter must not be placed in the same location as or used at the same time as another antenna or transmitter.

Importer information for regulatory radio components

For Moldova only:

Importer

S.C. GRAND PREMIUM S.R.L. Moldova
mun. Chisinau, str. Hîncesti sos., 2/2

For Turkey only:

Importer

Mercedes Benz Otomotiv Ticaret ve Hizmetler
A.Ş. Genel Merkez
Akçaburgaz Mah. Süleyman Şah Cad. No: 6/1
34522 Esenyurt/İstanbul

For Ukraine only:

Importer

PJSC "AUTOCAPITAL"
Velyka Vasylykivska str. 15/2
01004 Kyiv
Ukraine

For the United Kingdom only:

Importer

Mercedes-Benz Cars UK Limited
Delaware Drive, Tongwell
Milton Keynes, MK15 8BA
England

Importer of Mercedes-Benz vans

Mercedes-Benz Vans UK Limited
Delaware Drive, Tongwell
Milton Keynes, MK15 8BA

Importer of Mercedes-Benz spare parts

Mercedes-Benz Parts Logistics
Delaware Drive, Tongwell
Milton Keynes, MK15 8BA
England

Vehicle identification plate, VIN and engine number overview

Vehicle identification plate

Vehicle identification plate (example: Kuwait)

- ① Vehicle manufacturer
- ② Place of manufacture
- ③ Manufacturing date
- ④ Vehicle model
- ⑤ VIN (vehicle identification number)

Vehicle identification plate (example: all other countries)

- ① Vehicle manufacturer
- ② EU general operating permit number (only for certain countries)
- ③ VIN (vehicle identification number)
- ④ Permissible gross mass (kg)
- ⑤ Permissible gross mass of vehicle combination (kg) (only for certain countries)

- ⑥ Maximum permissible front axle load (kg)
 - ⑦ Maximum permissible rear axle load (kg)
 - ⑧ Paint code
- ① The data in the illustration is shown as an example.

VIN in the engine compartment

The VIN can be found on the crossmember in the engine compartment. Further information can be obtained at a qualified specialist workshop.

- ① Imprinted VIN (vehicle identification number)
- ② VIN (vehicle identification number) as a label

Engine number

Further information on engine numbers can be obtained at a qualified specialist workshop.

Operating fluids

Notes on operating fluids

⚠ WARNING Risk of injury due to harmful operating fluids

Operating fluids can be toxic.

- ▶ When using, storing and disposing of operating fluids, observe the imprints on the respective original containers.
- ▶ Always keep operating fluids in the sealed original container.
- ▶ Always keep children away from operating fluids.

🌿 ENVIRONMENTAL NOTE Pollution of the environment due to irresponsible disposal of operating fluids

Incorrect disposal of operating fluids can cause considerable damage to the environment.

- ▶ Dispose of operating fluids in an environmentally responsible manner.

Operating fluids include the following:

- lubricants
- Coolant
- Brake fluid
- windscreen washer fluid
- climate control system refrigerant

Only use products approved by Mercedes-Benz. Damage caused by the use of products that have not been approved is not covered by the Mercedes-Benz warranty or goodwill gestures.

You can identify operating fluids approved by Mercedes-Benz by the following inscriptions on the container:

- MB-Freigabe (e.g. MB-Freigabe 229.51)
- MB-Approval (e.g. MB-Approval 229.51)

Further information on approved operating fluids is available at the following locations:

- in the Mercedes-Benz Specifications for Operating Fluids by entering the designation
 - At <https://operatingfluids.mercedes-benz.com>
- At a qualified specialist workshop

Notes on brake fluid

Observe the notes on operating fluids (→ page 667).

⚠ WARNING Risk of an accident due to vapour pockets forming in the brake system

The brake fluid constantly absorbs moisture from the air. This lowers the boiling point of the brake fluid. If the boiling point is too low, vapour pockets may form in the brake system when the brakes are applied hard.

This impairs the braking effect.

- ▶ Have the brake fluid renewed at the specified intervals.

Have the brake fluid regularly replaced at a qualified specialist workshop. Only use a brake fluid approved by Mercedes-Benz according to MB-Freigabe or MB-Approval 331.0.

Coolant

Notes on coolant

Observe the notes on operating fluids (→ page 667).

⚠ WARNING Risk of fire- and injury from antifreeze

If antifreeze comes into contact with hot component parts in the engine compartment, it may ignite.

- ▶ Allow the drive system to cool down before you top up the antifreeze.

- ▶ Make sure that no antifreeze spills out next to the filler opening.
- ▶ Thoroughly clean the antifreeze from component parts before starting the vehicle.

! **NOTE** Damage caused by incorrect coolant

- ▶ Only use coolant that has been premixed with the required antifreeze protection.

Information on coolant is available at the following locations:

- In the Mercedes-Benz Specification for Operating Fluids 320.1
 - At <https://operatingfluids.mercedes-benz.com>
- At a qualified specialist workshop

! **NOTE** Overheating at high outside temperatures

If an inappropriate coolant is used, the cooling system is not sufficiently protected against overheating and corrosion at high outside temperatures.

- ▶ Only use coolant approved for Mercedes-Benz.
- ▶ Observe the instructions in the Mercedes-Benz Specifications for Operating Fluids 320.1.

Have the coolant regularly replaced at a qualified specialist workshop.

Proportion of antifreeze concentrate in the engine cooling system:

- A minimum of 50% (antifreeze protection down to about -37°C)
- A maximum of 55% (antifreeze protection down to -45°C)

Notes on windscreen washer fluid

Observe the notes on operating fluids (→ page 667).

! **WARNING** Risk of fire and injury from windscreen washer concentrate

Windscreen washer concentrate is highly flammable. If it comes into contact with hot components, it may ignite.

- ▶ Make sure that windscreen washer concentrate is not spilled near to the filler opening.

! **NOTE** Damage to the exterior lighting due to unsuitable windscreen washer fluid

Unsuitable windscreen washer fluids may damage the plastic surface of the exterior lighting.

- ▶ Only use windscreen washer fluids which are also suitable for use on plastic surfaces, e.g. MB SummerFit or MB WinterFit.

! **NOTE** Blocked spray nozzles caused by mixing windscreen washer fluids

- ▶ Do not mix MB SummerFit and MB WinterFit with other windscreen washer fluids.

Do not use distilled or de-ionised water. Otherwise, the fill level sensor may be triggered erroneously.

Recommended windscreen washer fluid:

- above freezing point: e.g. MB SummerFit
- below freezing point: e.g. MB WinterFit

For the correct mixing ratio, refer to the information on the antifreeze container.

Mix washer fluid with windscreen washer fluid all year round.

Vehicle data

Vehicle dimensions

The heights specified may vary as a result of the following factors:

- Tyres
- Load
- Condition of the suspension
- Special equipment

Height when open and headroom

Model	① Height when open	② Headroom
EQA 250+	2119 mm	1903 mm
All other models	2122 mm	1906 mm

Vehicle height

Model	Vehicle height
EQA 250+	1608 mm
All other models	1613 mm

Vehicle dimensions (all models)

All models	Vehicle dimension
Vehicle length	4463 mm
Vehicle width including exterior mirrors	2020 mm

All models

Vehicle width excluding exterior mirrors	1834 mm
Wheelbase	2729 mm

Weights and loads

Please observe the following notes for the specified vehicle data:

- Items of special equipment increase the unladen weight and reduce the payload.
- Vehicle-specific weight information can be found on the vehicle identification plate (→ page 666).

Roof load

Model	Maximum roof load
All models	75 kg

Maximum design speeds

The maximum design speed can differ from the stated figures in practice. It depends on the operating conditions, the special equipment and the size of the tyres.

Missing values were not available at the time of going to press.

Maximum design speed

Model	
All models	

High-voltage battery

Notes on the power supply for vehicles with high-voltage battery

In accordance with European standard EN 17186:2019, vehicle identifiers are located on the vehicle in the following places:

- On the inside of the socket flap
- On the charging cable connector

In addition, charging stations in European countries are equipped with energy supply identifiers. You can recharge your vehicle at charging stations whose charging station identifier corresponds to the vehicle identifier.

For further information on charging the high-voltage battery, refer to the "Charging the high-voltage battery" section(→ page 232).

- Supply type: AC
 Standard: EN 62196-2
 Design: type 2
 Plug type: charging cable socket and vehicle plug
 Voltage range: 480 V RMS

- Supply type: DC
 Standard: EN 62196-3
 Style: FF
 Plug type: charging cable socket and vehicle plug
 Voltage range: 50 V to 500 V
- Supply type: DC
 Standard: EN 62196-3
 Style: FF
 Plug type: charging cable socket and vehicle plug
 Voltage range: 200 V to 920 V

Missing values were not available at the time of going to press.

Energy content and charging time (EQA 250+)

EQA 250+	
Type	Lithium-ion
Usable energy content	
Range	

EQA 250+	
Charging time – Mode 4 with a maximum charging power of 100 kW	Approx. 32 min
Charging time – Mode 3 with 11 kW charging power (depending on the condition of the vehicle body)	Approx. 7 h 15 min

Maximum battery capacity and charging times (EQA 300 4MATIC)

EQA 300 4MATIC	
Type	Lithium-ion
Usable energy content	66.5 kWh
Range	

EQA 300 4MATIC	
Charging time – Mode 4 with a maximum charging power of 100 kW	Approx. 32 min
Charging time – Mode 3 with 11 kW charging power (depending on the condition of the vehicle body)	Approx. 6 h 30 min

Energy content and charging times (all other models)

All other models	
Type	Lithium-ion
Usable energy content	66.5 kWh
Range	
Charging time – Mode 4 with a maximum charging power of 100 kW	Approx. 32 min

All other models	
Charging time – Mode 3 with 11 kW charging power (depending on the condition of the vehicle body)	Approx. 6 h 30 min
Charging time – Mode 3 with 7 kW charging power (depending on the condition of the vehicle body)	Approx. 10 h 30 min

–Mode 3 charging times apply to AC charging from 0 % to 100 % of the usable energy content.

Charging time –Mode 4 applies to DC charging from 10 % to 80 % of the usable energy content.

The time taken to charge the battery depends on the state of charge of the battery, the ambient temperature and the charging power of the battery. The charging power, in turn, depends on the supply voltage, the current and the type of power supply.

The rated voltage range for your vehicle can be found on the information label in the socket flap (→ page 232).

Trailer hitch

General notes on the trailer hitch

Modifications to the cooling system may be necessary, depending on the vehicle model. The retrofitting of a trailer hitch is only permissible if a trailer load is specified in the vehicle documents.

Further information can be obtained at a qualified specialist workshop.

Mounting dimensions of the trailer hitch

- ① Fastening points
- ② Overhang dimension
- ③ Rear axle centre line

The overhang dimension and fastening points are valid for a trailer hitch installed at the factory.

Overhang dimension length

Model	② Overhang dimension
All models	945 mm

Trailer load

- ⓘ The tongue weight is not included in the trailer load.

The values for the **trailer load, braked** apply with a minimum start-off gradeability of 12 %.

Trailer load, braked

Model	
EQA 250	750 kg
EQA 250+	
EQA 300 4MATIC	1800 kg
EQA 350 4MATIC	

Trailer load, unbraked

Model	
All models	750 kg

Maximum trailer hitch tongue weight- and load capacity

! **NOTE** Damage caused by the trailer coming loose

If the tongue weight used is too low, the trailer may come loose.

- ▶ The tongue weight must not be below 50 kg.
- ▶ Use a tongue weight that is as close as possible to the maximum permissible tongue weight.

! **NOTE** Damage caused by the bicycle rack coming loose

When using a bicycle rack, both the maximal tongue weight and the maximal load capacity should be observed.

- ▶ Do not exceed the permissible load capacity.

Observe the additional notes on load capacity (→ page 332).

Tongue weight

Model	Maximum tongue weight
All models	80 kg

Load capacity

All models	Maximum load
When attaching the bicycle rack to the ball head	75 kg

Permissible rear axle load (trailer operation)**Trailer operation axle load**

Model	Axle load
EQA 250 EQA 250+	1400 kg
EQA 300 4MATIC EQA 350 4MATIC	1465 kg

Display messages

Introduction

Information about display messages

Display messages appear on the driver display.

Display messages with graphical symbols are simplified in the Owner's Manual and may differ from the symbols on the driver display. The driver display shows high-priority display messages in red. Certain display messages will be accompanied by a warning tone.

Please act in accordance with the display messages and follow the additional notes in the Owner's Manual.

For some display messages, symbols will also be shown:

-  Further information
-  Hide display message

You can select the respective symbol by swiping left or right on the left-hand Touch Control. Press  to display further information on the central display. Press  to hide the display message.

You can hide display messages to be acknowledged by pressing the back button  or with the left-hand Touch Control. The display messages will then be stored in the message memory.

Rectify the cause of a display message as quickly as possible.

High-priority display messages cannot be hidden. The driver display will show these display messages continuously until the cause of the display message has been rectified.

Calling up saved display messages

Driver's display:

The **Message memory: XX**message appears on the driver's display.

▶ Scroll through the display messages by swiping upwards or downwards on the left-hand Touch Control.

▶ **To exit the display:** press the  back button.

Occupant safety

Display messages

Restraint system malfunction Consult workshop

Possible causes/consequences and ► Solutions

* The restraint system is malfunctioning (→ page 88).

▲ DANGER Risk of fatal injuries due to restraint system malfunctions

Components in the restraint system may be activated unintentionally or not deploy as planned in an accident. In the event of an accident, the high-voltage on-board electrical system may not be deactivated as intended.

You may suffer an electric shock if you touch the damaged components of the high-voltage on-board electrical system.

- Have the restraint system checked and repaired immediately at a qualified specialist workshop.
- After an accident, switch off the vehicle immediately.

Recognition of a restraint system fault:

- the  restraint system warning lamp does not light up when the vehicle is switched on
- the  restraint system warning lamp lights up continuously or repeatedly during a journey

► Consult a qualified specialist workshop immediately.

Display messages

Possible causes/consequences and ► Solutions

If it is not possible to apply the electric parking brake or the red  indicator lamp continues to flash:

- Do not continue driving. Consult a qualified specialist workshop.
- Where necessary, also secure the parked vehicle against rolling away.

* The yellow  indicator lamp is lit and the red  indicator lamp flashes for approximately ten seconds after the electric parking brake has been applied or released. It then remains lit or goes out. The electric parking brake is malfunctioning.

If the state of charge is too low:

- Charge the 12 V battery (→ page 42).

To apply:

- Switch off the vehicle.
The electric parking brake will be applied automatically.

If you do not want the electric parking brake to be applied, e.g. at an automatic car wash or when the vehicle is being towed, leave the vehicle switched on. This does not include having the vehicle towed with the rear axle raised.

If the electric parking brake is not applied automatically:

- Switch the vehicle off and switch it back on
- Release and then apply the electric parking brake manually (→ page 262).

If it is still not possible to apply the electric parking brake:

- Consult a qualified specialist workshop.

Warning and indicator lamps

Overview of indicator and warning lamps

Some systems will perform a self-test when the vehicle is switched on. Some indicator and warning lamps may briefly light up or flash. This behaviour is non-critical. These indicator and warning lamps indicate a malfunction only if they light up or flash after the vehicle has been started or during a journey.

The indicator and warning lamps are located in the highlighted display sections.

Standard driver display

Widescreen cockpit driver display

Depending on the display settings, the positions of the indicator lamps on the driver display may differ from the example shown.
